Ayurveda at a Glance

Ayurveda (Ayuso veda Ayurveda)

Ayurveda is a sanskrit word derived from two roots : *Ayuh* and *Veda* The Literal meaning of the term is 'Science of Life'. The Origin of Ayurveda has been said to be from *'Brahma'* the Creator. The Knowledge was gradually passed on from *Gurus* to the *Sisyas* and from one generation to the next, traditionally. It is taken as eternal because nobody knows the time when it was not there.All this shows its long tradition and deep attachment to the Indian culture. It is *punya* (virtuous) as, Medical science is regarded as most pious profession because it renders services to the suffering humanity. Ayurveda is regarded as *upaveda* of *Atharvaveda*, but the term ayurveda is first used by Patanjali.

Ayurveda is that which deals with good, bad, happy and unhappy life, its promoters and non-promoters, span and nature. And this science of life-Ayurveda deals with life as a whole which is conjunction of body, sense organs, mind and self.

The uniqueness of this science is that it emphasizes on the preventive aspect, to protect the health of the healthy and normal individual.For this there are guidelines for ideal routine, diet and medicines according to individual constitution and need.There is also a vivid description of ideal conduct to be followed for psychic and social health.

The ones inflicted with disease can be treated by two ways i.e. purification to eliminate vitiated *dosas* (deranged body humors), the other is to pacify vitiated *dosa* by medicines. To fulfil these two aims, the subject matter of ayurveda has been divided into three *sutras* (tri aphormism) *Hetu* – causes for both health as well as disease; Linga Symptoms – of healthy and diseased;*Ausadhi*'therapy' for promotion and maintenance of health and elimination of disease.

Ayurveda traditional medicine formulations till date included in the Traditional Knowledge Digital Library are 97,337.

Introduction

Ayurveda (the science of life) is one of the branches of *vedas*. It is regarded as *upaveda* of *rigveda* or *atharva-veda* but,really speaking,it is a stream of the knowledge coming down from generation to generation since eternity parallel to the *vedic* literature that is why its emergence has been said to be from the creator (Brahma) himself prior to the creation.It is called eternal because nobody knows when it was not there. All this shows its long tradition and deep attachment to the Indian culture.

About Ayurveda

Ayurveda 'the Science of Life' is a holistic system of medicine from India, which evolved from Brahma sages of Ancient India some 3000-5000 years ago.The principles and philosophy of Ayurveda view man as a complex whole, including our external and internal environments.The principles are derived from universal laws of nature that have changed little through time. With subjective, objective, and intuitive approaches to gaining knowledge, incorporated with a deep understanding of the unseen intelligence of the universe.The practices of Ayurveda have withstood the test of time.

Ayurveda defines life 'Ayuh' as the intelligent coordination of our four parts, the soul,the mind, the senses, and the body, with the totality of nature and the cosmos.Health is not just a state of the body. We interact with the seasons, planetary changes of the earth, and moon, other planets, as well as orbiting relationships within our lives, our loved ones and friends, co-workers etc. We affect and are affected by every other animate and inanimate thing in existence. Bringing all of this into balance is the key to living healthy.

In Ayurveda the whole life's journey is considered to be sacred.

Definition of Ayurveda

Ayurasmin vidyate----------. [S.S.-I/15]

Ayurveda is that which deals with *Ayuh*(life) or promotes life-span

Ayurveda is that which deals with good, bad, happy and unhappy life, its promoters and non-promoters, span and nature

Sarirendriyasatvatmasamyogo dhari jivitam----------
. [C.S.-I/42]

Definition of Ayuh(Life)

Satvamatma sariram ca trayamaitattridandavat----------.[C.S.-I/46]

Mind, self and body – these three make a tripod on which the living world stands.That(living body)is *Purusa*(person),sentient and its location is Ayurveda.

Definition of Sarira(Body)

The science of Ayurveda has simplified the organizational layout of the human body into three basic components, *Dosa*(Body Humours), *Dhatu* (Tissue) and *Mala* (Impurities).

Dosadhatumalamulam hi sariram----------.[S.S.-XV/3]

Body is originally composed of *dosas*, *dhatus* and *malas* and as such try to comprehend their characters being delivered hereafter.

Pancamahabhootasaririsamayah----------. *[S.S.-I/22]*In this scripture , *Purusa* is defined as combination of the five great elements and consciousness.

The Ayurvedic philosophy says that an individual is bundle of 'spirit',desirous of expressing itself,uses subjective consciousness or *Satva* to manifest sense organs and a mind. Spirit and mind then project themselves into a physical body,created from the five*(Panca)* great *(maha)* eternal elements *(bhutas)* together called the*Pancamahabhutas* –which arise from Tamas.The entire science of Ayurveda is based on the "five great elements" *(Pancamahabhuta)* theory.The sense organs then using *Rajas* to project from the body into the external world to experience their objects. The body becoming the vehicle of mind, for gratification of senses.

The *Bhutas* combine into *'tridosas'* or bioenergetic forces that govern and determine our health or physical condition. While the three *gunas* (Rajas; or activity, *Tamas* or inertia and *Satva* , which balances the first two) or psychic forces determine our mental and spiritual health.Ayurveda is thus a holistic system of health care that teaches us to balance these energies in order to achieve optimum health and well being.

Definition of Health

Samadosah samagnisca samadhatumalakriyah ----------.[S. S.-XV/ 41]

One whose Dosas, *Agni* and function of *Dhatu* and *Malas* are in the state of equilibrium and who has cheerful mind, intellect and sense organs is termed as *"Svastha"* (Healthy).

It is to be said that:

Prayojanam casya svasthasya svasthyaraksanamatursya vikaraprasamanam ca....[C.S.-XXX/26]

Aim of Ayurveda

The objective of Ayurveda is to protect health of the body and to alleviate disorders in the diseased.

Dharmarthakamamoksanamarogyam----------.[C.S.-I/16]

Disease-free condition is the best source of virtue, wealth, gratification and emancipation while the disease is destroyer of this source , welfare and life itself

Subject Matter of Ayurveda

Hetulingaousadhgyanam svasthaturaparayanam----------
.[C.S.-I/24]

Ayurveda provides knowledge of aetiology,symptomatology and therapeutics, best way for both the healthy and the sick,tri-aphormismic, continuing since time immemorial and virtuous which was first known to *Brahma* the creator.

Hitahitam sukham dukhamayustasya hitahitam----------.[C.S.-I/41]

'Ayuh' means the conjunction of body , sense organs, mind and self and is known by the synonyms *dhari*, *jivita*, *nityaga* and *anubandha*.

Salient Features of Ayurveda

There are several aspects of this system of medicine which distinguish it from other approaches to health care:

1.Ayurveda describes three fundamental universal energies which regulate all natural processes on both the macrocosmic and microcosmic levels.That is, the same energies which produce effects in the various galaxies and star systems are operating at the level of the human physiology--in our own physiology. These three universal energies are known as the *Tridosa*.

2.Ayurveda is a complete medical system which recognizes that ultimately all intelligence and wisdom flows from one Absolute source *(Paramatma)*.Health manifests by the grace of the Absolute, acting through the laws of Nature *(Prakriti)*.Ayurveda assists Nature by promoting harmony between the individual and Nature by living a life of balance according to her laws.

3.It focuses on establishing and maintaining balance of the life energies within us,rather than focusing on individual symptoms.

4.It recognizes the unique constitutional differences of all individuals and therefore recommends different regimens for different types of people. Although two people may appear to have the same outward symptoms, their energetic constitutions may be very different and therefore call for very different remedies.

5.Finally, the ancient Ayurvedic physicians realized the need for preserving the alliance of the mind and body and offers mankind tools for remembering and nurturing the subtler aspects of our humanity. Ayurveda seeks to heal the fragmentation and disorder of the mind-body complex and restore wholeness and harmony to all people.

6.To balance the elements and the *doshas* of the body and the senses, there are many treatments, therapies, and exercises available. To balance the elements of the mind, meditations, mantra, and exercises are often used. Massage and *rasayana* treatments, along with visualization, *pranic* breathing, and other practices,allow personal access to intuition, and the innate knowledge of the soul.

7.Ayurveda believes five basic elements *Pancamahabhutas* (space,air,fire,water and earth) manifest in the human body as three basic humours known as *tridosas(Vata,Pitta and Kapha)*. These three govern creation,maintenance and destruction of bodily tissues as well as the assimilation and elimination.Each person is born with a unique combination of these dosas which decides their basic constitution called *Prakruti*.Understanding of each person's Prakruti for deciding their personal diet and exercise pattern, supplements and medicinal herbs,cleansing and rebuilding therapies that is right for them are among the chief methods, Ayurveda employs for the maintenance and restoration of health.

***Astanga* Ayurveda**

Ayurveda has Eight divisions such as-

Tasyayurvedasyaanyastauh ----------.[C. S.-XXX/28]

Kayacikitsa(Medicine),Salakya(dealing with disease of supra-clavicular region- ENT. & Optha.),*Salyapahartrka*(dealing with extraction of foreign bodies- Surgery) ,*Visa- gara–vairodhika-prasaman*(dealing with alleviation of poison, artificial poison and toxic symptoms due to in take of antagonistic substance – Toxicology),*Bhuta Vidhya*(dealing with spririt or organisms- Psychiatry Medicine),*Kaumarabhrtya* (Pediatrics),*Rasayana*(dealing with promotive measures – Rejuvenates) and *Vajikarana* (dealing with aphrodisiacs-Aphrodisiac)

Viz.

1.*Kayacikitsa* (Medicine)

2.*Salakya* (Ent. &Optha.)

3.*Salya* (Surgery)

4.*Visa Vigyan* (Toxicology)

5.*Bhuta Vidya* (Psychiatry Medicine)

6.*Kaumarabhrtya*(Pediatrics)

7.*Rasayana* (Rejuvenates)

8.*Vajikarana* (Aphrodisiac)

These can be classified as follows :

Promoting Health	**Curatives / Treatment of diseases**
Rasayana	***Kaya cikitsa***
Vajikarana	***Salya***

Salakya

Kaumarbhritya

Agadatantra

Bhutavidya

A number of treatise were composed on each branch making all of them full fledged specialities, but at the same time keeping room for inter-disciplinary approach and coordination. Two specialities developed to greater extent making two distinct schools. One, the school of medicine and the other the school of surgery.The former was known as *Kaya Cikitsa*, *Atreya* or *Punarvasu sampradaya*.The latter as *Salya* or *Dhanvantari sampradaya*. Although all the eight branches of ayurveda have been described in each *Brahatrai* (three big compendiums) , each emphasizes on one or two specialities:

Kaya-cikitsa	Caraka samhita, Astanga Hridaya Astanga samgrha, Susruta uttara tantra.
Shalya tantra	Susruta samhita, Astanga Samgrha
Shalakya tantra	Susruta samhita, Astanga samgrha, Nimitantra
Kaumarbhritya	Kasyapa samhita, Astanga samgrha, caraka samhita, susruta samhita
Rasayana	Caraka samhita, susruta samhita, Astanga samgrha
Vajikarana	Caraka samhita, susruta samhita, Astanga samgrha
Agada Tantra	susruta samhita, caraka samhita
Bhuta Vidya	Astanga samgrha, Kasyapa Samhita, caraka samhita

Basic Principles of Ayurveda

Basic Principles of Ayurveda comprise of :

1.The *TriGunas*-

Three Fundamental universal energies : viz - *Satva* ,*Rajas* and *Tamas*

2.The *PancaMahabhutas* -

Five basic elements viz.-*Akasha* (Space),*Vayu* (Air),*Teja* or *Agni*(Fire),*Jala*(Water) and *Prithvi* (Earth)

3.The *TriDosas* -

Three Body Humours viz.-*Vata*,*Pitta* and *Kapha*

4.The *SaptaDhatus* -

Seven types of body tissues :viz.- *Rasa* (fluid) *Dhatu*, *Rakta*(blood)*Dhatu*, *Mamsa Dhatu,Meda*(fat)*Dhatu,Asthi Dhatu,Majja Dhatu* and *Sukra Dhatu*

5.The *TrayodosaAgni* -

Thirteen types of digestive fires : viz.-*Jatharagni* (gastric fire), *SaptaDhatvagni* and *PancaBhutagni*

6.The *TriMalas* -

Three types of Body Wastes :viz.-*Purisa* (faeces),*Mutra* (urine) and *Sveda* (sweat)

--The PanchaMahabhutas

"Mahabhutani kham vayuragnirapah ksitistatha !

sabdah sparsasca rupam ca raso gandhasca tadgunah !!"[C.SA.- I/27]

The five *mahabhutas* are *Akasa*,*Vayu*, *Agni*,*Ap* or *jala* and *Prthivi* . viz – Sound,Touch,Vision, Taste,and Smell are their properties respectively .

According to Ayurveda everything in Universe is composed of the *Pancamahabhutas – Akasa* Space), *Vayu* (Air), *Teja* or *Agni*(Fire),*Jala*(Water)and *Prith vi* (Earth).Omnipresent,they are mixed in an infinite variety of relative proportions such that each form of matter is distinctly unique. Although each element has a range of attributes, only some get evident in particular situations. Constantly changing and interacting with each other, they create a situation of dynamic flux that keeps the world going.

In a simple,single living cell for example the earth element predominates by giving structure to the cell.The water element is present in the cytoplasm or the liquid within the cell membrane.The fire element regulates the metabolic processes regulating the cell.While the air element predominates the gases therein. The space occupied by the cell denoting the *Akasa*.

In the case of a complex, multi-cellular organism as a human being for instance,*akasa* corresponds to spaces within the body (mouth, nostrils, abdomen etc.); *vayu* denotes the movement (essentially muscular also nervous system); *agni* controls the functioning of enzymes (intelligence, digestive system, metabolism); *jala* is in all body fluids (as plasma, saliva, digestive juices); and *prithvi* manifests itself in the solid structure of the body (bones, teeth, flesh, hair et al)

The *Pancamahabhutas* therefore serve as the foundation of all diagnosis & treatment modalities in Ayurveda and has served as a most valuable theory for physicians to detect and treat illness of the body and mind successfully.

The relationship Pancamahabhutas with Sense organs, its Properties and Actions are as follows :-

Panca Mahabhutas	**Sense Organs**	**Sensory Faculty**	**Properties**	**Actions**
Space	Ears	Sound	*Creates natural void in the body ,* No distinct taste	*Produces softness,lightness and porosity
Air	Skin	Touch	*Light, clear and dry.*Governs inhalation, exhalation,opening and closing of eyelids, extension and contraction of joints, locomotion and other motor functions. *slightly bitter taste	*Creates dryness,lightness and emaciation.
Fire	Eyes	Visual(Sight)	*Rough & bright,*Controls temperature and luster of body colour.*Pungent taste.	*Helps in digestion ,maturation,improves eye sight
Water	Tongue	Taste	*Cold, heavy fluid,*Slimy, fat and sweat by nature *Sweet & astringent,sour & saline taste.	*Imparts glossiness.*Enhances fluid content & purgative *Acts as nutrient, emollient and purgative.
Earth	Nose	Smell	*Heavy, immobile, compact & rough.*Controls organs as teeth, nails,	*Increases firmness & strength of the body nutrient,emollient and purgative

			flesh,skin, tendons & muscles.*Sweet taste.	

--The *TriGunas*

The three *gunas Satva,Rajas* and *Tamas*- are the three essential components or energies of the mind.Ayurveda provides a distinct description of people on the basis of their *Manasa* (psychological) *Prakriti* (constitution). Genetically determined, these psychological characteristics are dependent on the relative dominance of the three *gunas*.

Trividham khalu satvam-suddham, rajasam,tamsamiti----------.[C.SA.-IV/36]

The psyche is of three types –Pure or *Satva, Rajas* and *Tamasa*

While all individuals have mixed amounts of the three, the predominant guna determines an individual's *mansa prakriti*.In equilibrium, the three *gunas* preserve the mind (and indirectly the body), maintaining it in a healthy state. Any disturbance in this equilibrium results in various types of mental disorders.

Satva characterised by lightness,consciousness, pleasure and clarity, is pure, free from disease and cannot be disturbed in any way. It activates the senses and is responsible for the perception of knowledge.*Rajas* ,the most active of the *gunas*,has motion and stimulation as its characteristics.All desires,wishes,ambitions and fickle-mindedness are a result of the same.While *Tamas* is characterised by heaviness and resistance.It produces disturbances in the process of perception and activities of the mind.Delusion,false knowledge,laziness,apathy, sleep and drowsiness are due to it.

Rajas and *Tamas* as with the *dosas*, can be unbalanced by stress and negative desires as *kama* (lust),*irshya* (malice),*moha* (delusion and hallucination),*lobha* (greed),*cinta* (anxiety),*bhaya* (fear) and *krodha*(anger).Each of these three properties is also comprised of sub-types and the particular sub-type to which one belongs to determine the qualities of that individual.

Satvika individuals are usually noble and spiritual in character, their nature determined as much by body type as their star constellation, having an element of kapha in their constitution.:-

***Satvika* Subtype Qualities**		
Brahma	Free from passion, anger, greed, ignorance or jealousy,possessing knowledge and the power of discrimination.	star constellation body type
Arsa	Excellent memory, purity,love and self-control,excellent intellectual frame of mind,free from pride, ego,	

	ignorance, greed or anger.Possessing the power of understanding and retention.
Aindra	Devotion to sacred books, study rituals and oblations.Devotion to virtuous acts,far- sightedness and courage. Authoritative behaviour and speech.Able to perform sacred rituals.
Yamya	Free from mean and conflicting desires and acts.Having initiative, excellent memory and leadership. Free from emotional binds,hatred,ignorance and envy.The capacity for timely action.
Varuna	Free from mean acts. Exhibition of emotion in proper place. Observance of religious rights.
Kubera	Courage, patience, and hatred of impure thoughts.Liking for virtuous acts and purity. Pleasure in recreation.
Gandharva	Possession of wealth, attendants and luxuries. Expertise in poetry,stories and epics.Fondness for dancing singing and music.Takes pleasure in perfumes, garlands and flowers.Full of passion.

Rajasikas are vulnerable to temptations, are very human in their character and approach to life.:-

Rajasika **Subtype Qualities**		
Asura	Indulgence in self-praise, bravery, cruelty,envy and ruthlessness. Terrifying appearance.	Vulnerable body type
Raksasa	Excessive sleep and indolence.Envious disposition.Constant anger, intolerance,and cruel behaviour.Gluttonous habits.	
Paisaca	Unclean habits.Cowardly,with a terrifying disposition.Gluttonous habits.Fondness for the opposite sex.Abnormal diet and regimen.	
Sarpa	Sharp reactions. Excessive indolence.Frequent fearful disposition.Brave or cowardly attitude depending on situations.	

Praita	Excessive desire for food.Envious character.Excessive greediness and actions without discrimination.	
Sakuna	Full of passion. Unsteadiness, ruthlessness,and excessive attitude for food.	

A dominant *Vata* ensures that *Tamasika* individuals are the most down to earth,concerned about fundamental questions of practical existence, specially when confronted by more spiritual and less physical issues.:-

Tamasika **Subtype Qualities**		
Pasava	Lack of intelligence, forbidding dispositions, envious nature.Excessive sexual indulgence and sleep.	Life enjoyable body type
Matsya	Unsteadiness, constant passion, and cowardice. Excessive desire for water intake.	
Banaspatya	Indolence.Excessive indulgence in food.Deficiency of intellectual faculties.	

--The *TriDosas*

"Vayuh pittam kaphasceti trayo dosah samasatah !!"[A.S.-I/11]

Vata, Pitta and *Kapha* are three name of *tridosas* -*Vata*(air),*Pitta*(bile)and *Kapha*(Phlegm) means more than literal.*Dosas* are basically three different forms of energy.

The *Tridosas* (tri meaning three and dosas being the basic physical energies) are the primary and essential factors of the human body that govern our entire physical structure and function. Derived from the *Pancamahabhutas*, each dosa which like the elements cannot be detected with our senses but their qualities can be – is a combination of any two of the five *bhutas* with the predominance of one.Called *Vata, Pitta* and *Kapha* in *Sanskrit*, these three are responsible for all the physiological and psychological processes within the body and mind – dynamic forces that determine growth and decay. Every physical characteristic, mental capacity and the emotional tendency of a human being can therefore be explained in terms of the *tridosas*.

Most of the physical phenomena ascribed to the nervous system by modern physiology for example,can be identified with *Vata*.Just as the entire chemical process operating in the human body can be attributed to *Pitta*, including enzymes, hormones and the complete nutritional system. And the activities of the skeletal and the anabolic system, actually the entire physical volume of an organism, can be considered as *Kapha*.

The relation between *Tri-Dosas* and *Panca-Mahabhutas* with respect to their *Guna* and *Karma*(Properties and Functions) as follows :

***Vata* (*Vayu* and *Akash*)**	***Pitta* (*Agni* and *Jal*)**	***Kapha* (*Jal* and *Prithvi*)**
Light	Light	Heavy
Cold	Hot	Cold
Dry	Oily	Oily
Rough	Sharp	Slow
Subtle	Liquid	Slimy
Mobile	Sour	Dense
Clear	Pungent	Soft
Dispersing	-	-
Erratic	-	-
Astringent	-	-

--The *SaptaDhatus*

Nourishment of these seven body tisuues takes place in sequential manner with original material provided by digested food material.

Rasa provides contentment and saturation and nourishes blood, blood generates clarity in complexion,nourish muscles and sustains life ; muscles strengthen the body and nourishes *medas*(fat),*medas* gives rise to unctuous materials , sweat and firmness and nourishes *asthi* (bones),*asthi* support the body and nourish marrow; provides function,strength,nourishes semen and fills up bones; semen provides valour,discharge , pleasure, physical strength ,exhilaration and is meant for reproduction or seed .

The *Sapta*(seven) *Dhatus* (tissues) elements form the pillars of the body that form the means of nourishment and growth while providing support to the body as well as the mind.

Rasa (fluid)*Dhatu* –Derived from the digested food, it nourishes each and every tissue and cell of the body and is analogous to the plasma.

Rakta (blood) *Dhatu* - Regarded as the basis of life, it is analogous to the circulating blood cells. It not only nourishes the body tissues, but provides physical strength and colour to the body.

Mamsa Dhatu – The muscle tissue, its main function is to provide physical strength and support for the *meda dhatu*.

Meda (fat)*Dhatu* – Consists of adipose tissue providing support to *asthi dhatu*.It also lubricates the body.

Asthi Dhatu – Comprising of bone tissues, including cartilages, its main function is to give nourishment to the *majja dhatu* and provide support to the *mamsa dhatu*.

Majja Dhatu– Denoting the yellow and red bone marrow tissue, its main function is to fill up the asthi and to oleate the body.

Shukra Dhatu – The main aim of this reproductive tissue is to help reproduction and strengthen the body.

Since the *dhatus* support and derive energy from each other, affecting one can influence others. For instance, interference in the manufacture of the plasma affects the quality of the blood, which in turn effects the muscle. Each tissue type has its own *agni*,which determines metabolic changes in the tissues and forms by-products,which are either used in the body or excreted. Menstural periods for example are a by-product of *rasa*.The tissues are also governed by the three *dosas*,and any imbalance in them also causes imbalances in *dhatus*.Heavy periods therefore can also be caused by the effects of the excess of *Kapha* on *plasma*.

--The *TriMalas*

Mala mutra sakrtsvedadayo api ca----------.[A.S.-I/20]

Malas are the various waste products of food and the *dhatus* produced during the normal digestive and metabolical process.The three primary *malas* being *Purisa*(faeces),*Mutra* (urine) and *Sveda* (sweat).Ayurveda clearly states that only a balanced condition of *dosas*, *dhatus* and *malas* is arogya (good health or disease free condition) and their imbalance is the cause of ill health or disease.

Purisa is the waste left back after nutrients of digested food have been absorbed in the small intestine. While water and salt are absorbed in the large intestine,the residue now converted into solid faeces,leaves the body.The consistency of the faeces depends both on gastrointestinal mobility and nature of diet.

The *tridosas* must be in balance to ensure normal evacuation.*Pitta* and *kapha* help digestion and *vata* governs the mobility throughout the process. Any discrepancy or imbalance between these can lead to various symptoms of abdominal heaviness or pain, flatulence, constipation or diarrohea. It may also give rise to diseases as rheumatoid arthritis, osteoarthritis, low-back pain, asthma, bronchitis as well as stomach ulcers and irritable bowels.

Mutra is derived during the course of biological processes within the human body. The first stage of urine formation begins in the large intestine where fluids are absorbed into the system. The entire urinary system (kidneys, uterus, bladder and urethra) takes part

in the formation and elimination of urine, regulating the fluid balance in our body and also maintaining blood pressure. Any imbalance of increased or decreased urine,may result in disorders such as kidney stones urinary infections, cystitis, abdominal pain and bladder disorders.

Sveda is the third primary mala, and it occurs as a waste product during the synthesis of *meda dhatu* (fatty tissue). Eliminated through skin pores, it controls body temperature and helps to regulate the electrolytic balance. The channels responsible for bringing the sweat to skin surface are known as *sveda vaha srotas*.It is essential that normal formation and flow of sweat takes place as otherwise it may lead to skin infections,itching/burning sensation over the body, loss of fluid balance and reduced body temperature.

--The *TrayodosaAgni*

The biological fire that governs metabolism,*agni* encompasses all the changes in the body and mind from the dense to the more subtle. Such changes include the digestion and absorption of food,cellular transformations, assimilation of sensory perceptions and mental and emotional experiences.*Agni* therefore covers whole sequences of chemical interactions and changes in the body and mind. Digestive abilities being related to the strength of *agni*

Agni and *pitta* are closely connected. While both are hot and light,*agni* is subtle and dry.The heat energy to help digestion contained by *pitta* is *agni*.*Pitta* is therefore the container and *agni* the content.*Agni* is acidic in nature and stimulates digestion.It is subtly related to the movement of *vata*.In every tissue and cell *agni* is present and is necessary for maintaining the nutrition and auto-immune mechanism. By destroying micro-organisms, foreign bacteria and toxins in the stomach and the intestines.

A balanced *agni* therefore is vital for health. The strength of the body to resist disease and also its physical strength are directly related to its heat energy determining the metabolic processes of the body. Disturbances of Agni are usually the chief causes of disease.

As per Ayurveda there are thirteen types of *Agni* in the body. The most important of them is the *Jatharagni*,the gastric fire, responsible for digestion of food eaten by correlating hydrochloric acid in the stomach and the digestive enzymes and juices secreted into the stomach, duodenum and the small intestines. If digestive *agni* is low and the capacity is impaired, one may experience pain, discomfort, feeling of heaviness or gases gurgling, constipation or loose stools.

Other *Agni* are:

SaptaDhatvagni and *PancaBhutagni*

Personal Hygiene

▶**Introduction**

▶***Dinacarya* / Daily Regimen**

▶***Rtucarya* / Seasonal Regimen**

Introduction

Ayurveda,the art and Science of life has a two fold aim i.e.Preservation and Promotion of health in the healthy and restoration of health in diseased, for health is the key to achieve the purpose and ultimate goal of Life.For preservation of health both personal and social, the *rishis* who developed *Ayurveda*,determined long ago which habits are desirable and which should be avoided, and prepared daily and seasonal routines as well as codes of conduct to be followed.

These routines are so designed to suit the cyclical changes that take place in body physiology and psychology (i.e. internal environment of a person) during day and night rhythms i.e. circadian rhythms and seasonal variations (i.e. External environment) and thereby maintain a state of dynamic equilibrium and hence the state of health.

In this routine, the individual variations are to be observed on the basis of *Desa,Kala and Prakruti* of a person. Since, day and night rhythms and seasonal rhythms influence body physiology differently in different persons and the Key to difference lies in these factors.Therefore, the daily routine and Seasonal regimens, which are prescribed for general population, should be implemented/advised after working out the finer details on these points.

Desa means habitat.The place where person lives.This has been categorized into three i.e. *Jangala, Anupa* and *Sadharana* on the basis of its characteristic features like geographical condition, climatic conditions, flora and fauna, wild life conditions etc.By nature, they harbour the predominance of one or two of the *Mahabhutas* and therefore corresponding *Dosas* in bodies of persons belonging to that *desa i.e. Vata, Pitta, Kapha* - the physiological entities of body.

For example: In people living in *Jangala Desa ,Vata* predominance follows naturally and therefore those periods of time in day or night or season which show predominance of *vata dosa*, influence more aggressively and hence aggressive measures are employed to counter this.

On the contrary if the person from *Anupa desa* where *Kapha* predominance follows naturally does not get influenced by *Vatik* predominant time or season in the

manner *Jangala Desa* person gets.But he needs to take extra precautions in those Seasons,which enhance *Kapha Dosa naturally and so on*.

The same is the case with *Kala* i.e. time factor. It influences in two ways i.e. through Cosmic rhythm which is the topic of discussion here and, through time period of life of a person i.e. in first stage of life which is childhood *Kapha* is predominant hence one has to take extra precautions during seasons of *Kapha* predominance and so also at places where there is natural predominance of *Kapha Dosa*.

Similarly in old age, *Vata dosa* prevails and hence at that time of Day or night and season, when *Vata* is aggravated naturally one needs to take extra precautions.

Last but not the least,*Prakruti*, i.e. inherent constitution of body which may show predominance of one or two of the dosas i.e. *Vata, Pitta, and Kapha*.

Based on these predominances, the influence of seasons having predominances of again one or two of these takes place.Hence the variation in regimens is desired.

Pitta predominant person requires being more careful in hot seasons like summer and autumn,the seasons which have natural rhythmic tendency to aggravate *pitta* where as *Kapha* person may not be affected as vigorously as *Pitta* person. Therefore in spite of general regimens advocated, finer details are the matter of specifications according to *Desa Kala and Prakruti*.

Natural Predominance of *Tridosas* in various units of time

Dosa	**Day**	**Night**	**Related to Meals**	**Age**
Kapha	6 AM to 10 AM	6 PM to 10 PM	Immediately after meals up to app. 1½ hr	Childhood
Pitta	10 AM to 2 PM	10 PM to 2 AM	From 1½ hr to 3 hrs after meals	Middle age and Young age
Vata	2 PM to 6 PM	2 AM to 6 AM	From 3 hrs to 4½ hrs. or till next meal is taken	Old age

Cyclical Rhythm or Natural predominance of *Dosas* in Various Seasons

Dosa	***Hemanta***	***Sisira***	***Vasanta***	***Grisma***	***Varsa***	***Sarad***
Vata				?	??	*
Pitta	*				?	??

Kapha	?	?	??	*		

? = State of accumulation; ?? = State of aggravation * = Pacification

Varsa(Rainy Season)observes the *prakopa* of *Vata dosa* and accumulation *(sancaya)* of *Pitta*. *Kapha* is also not in its pacified form.Hence most critical period of year. Specially for those residing in *Jangala pradesa* and those who are of old age and of *Vata prakrti* or body constitution with *Vata* predominance.

Dosa	***Jangala Desa***	***Anupa Desa***	***Sadharana Desa***
Vata	++		+
Pitta			+
Kapha		++	+

++ = Predominant; + = Balanced

***Dinacarya* / Daily Regimen**

Dinacarya as the name implies,corresponds to the daily routine activities that every person needs to carryout in order to maintain a good and healthy life.

Ayurveda describes life to be the communion of body, senses, mind and soul (C.Su.1/42).

And therefore *dinacarya*,the design of daily routine includes the care of all these components, which we shall appreciate in the forthcoming description.

Two things are basic to the maintenance of life.One is, elimination of wastes that get produced during the process of digestion, metabolism and various other psychic activities as well as that which have been acquired from external environment i.e. dust, polluting elements etc.Second is making up for the wear and tear that has occurred during various physiological activities, and building up of new tissues and of structures for the sake of growth and development and at the same time such activities as those which strengthen the body tissues, enhance their capabilities, and make them and hence the whole body, capable of withstanding stress of any kind.

Ayurveda advocates the synchronized practice of these activities in the manner that it suits the circadian rhythm of *tridosas* side the body and their physiological activities therein so that the person is benefited the maximum and remains in harmony with internal and external environment.

Waking up

The best time to wake up from bed is *Brahma Muhurta* i.e. early morning 45 minutes before Sunrise so that body can begin to synchronize itself to the rhythm of the Sun.

This period is known as *Brahma Muhurta* and *Brahma* denotes knowledge and deity hence it is also a good time to learn and worship, a time to request nature to maintain and amplify our own harmony during the day so that we may interact harmoniously with everyone and everything we encounter.

Moreover one should also take into account,before rising from the bed,whether or not the food taken the previous night is digested properly or not by observing the symptoms of complete digestion like lightness, etc in his/her own body.

Excretion of wastes

Feeling of natural urge to pass stools and urine is one symptom of complete digestion and therefore immediately after waking up person should do that with complete concentration. This period of day actually being last portion of night governed by *vata dosa* further helps in this activity as,it is one of the functions of *vata*.

Here again Ayurveda advises not to forcefully raise the urges nor suppress them since suppression of urges causes diseases like pain or cramps in calf muscles,pain in abdomen etc. provocation of urges causes diseases like piles.

Washing of hands and mouth

Ayurveda mentions the specific method of cleaning hands and mouth with clean and clear water every time after passing stools or urine, having nails cut or shaving or haircutting,after cleansing hands, feet, eyes, ears, nose, after having directly touched flesh or blood any such thing and before taking meals, after the meals, after sneezing, before worshipping and after coming from a walk or from anywhere outside, on entering home, for hygiene purpose

Danta Dhawana/Cleansing of Teeth

Cleansing of teeth is done in the morning and after every meal with the help of well chewed herbal twigs which are used once and then thrown away like that of *Neem* Azadirachta indica),*Babool*(Acacia arabica),*Khair*(Acacia catechu),*Asana*(Pterocarpus marsupium) or those which possess bitter, pungent or astringent taste as this not only cleanses the teeth but also strengthens the gums and teeth.Following this the powders of fragrant herbs like *Dalcini*(Cinnamomum

zeylanicum),*Elaichi* (Elettaria cardamomum), *Tejpatra* (Cinnamomum tamala) is advised to rub on teeth to improve the hygiene of oral cavity.

Following persons should restrict themselves from Dental cleansing :

- The one who has indigestion
- The one suffering from cough, sneezing, dyspnea and fever
- The one who is excessively thirsty or having stomatitis
- One suffering from diseases of eye, heart & head

Tongue-Cleaning/*Jihva Nirlekhana*

Tongue is the mirror of one's digestion status. One should inspect his/her tongue daily in the morning.Coating on the tongue signifies a state of indigestion or improper digestion of food material.A coating on the tongue may be due to decreased rate of metabolism therefore one may be able to seek help of physician if is watchful.

Gentle Scraping of tongue is advised following cleansing of teeth preferably with herbal twigs or with metallic scraper made of silver, copper or stainless steel.

This improves oral hygiene and it helps in development of appetite and sense of lightness in mouth.It protects one from diseases of oral cavity, foul smell and also diseases of tongue & teeth.

Eye Care

For the purpose of cleaning, eyes are sprinkled daily in the morning with Luke- warm water except for in summer and autumn when naturally cooled water is used, while sprinkling is done, the mouth should be filled with water. Further,

 In order to get rid of the dirt and effects of environmental pollution on the eyes

 To make eyes more enduring to sun and air

 To improve the eyesight

 To enhance the beauty of eyes

Certain medicaments are described in Ayurvedic texts to be put into the eyes

Among these, certain types of Medicaments are advised to be put daily in the morning and others are advised to be put once in a week or at the interval of 5 to 8 days.Also

once a week drops of honey or Berberry or *Triphala* decoctions can be instilled to expel excess *kapha* through lacrymation.

Care of Nose

The nose should be cleaned out with fresh water and a drop of medicated oil (*Nasya* - one of the therapeutic procedure of *panca-karma*)should be instilled daily into each nostril with the tip of little finger by following proper method of *Nasya* procedure.It has got several benefits apart from care of nose.

- If strengthens the capacity of smell perception.
- It also provides nutrition to all the sense organs and head since nasal cavity is believed to be the door of entry to the head and hence nasya enhances their sharpness in perception of respective senses.Mainly improves eyesight.
- It keeps the skin wrinkle free and also prevents hair from greying and falling.
- Improves the quality of voice.
- Enhances the facial beauty, and strengthens shoulders, neck, chest and head region.

Care of tongue and oral cavity

Holding in mouth of medicated oils or decoctions or other unctuous substances like milk or *ghee* in specific amount for specific period of time is known as *Gandusa*. This procedure follows *Nasya* procedure described above.It gives strength to buccal cavity by nourishing and stretching facial muscles.Cracking of lips, dryness of mouth and hoarseness of voice are cured by this procedure.

Holding of herbal pastes/decoction specially made of astringent drugs in mouth and rolling them over with the help of tongue from one side of the mouth to the other, is known as *kavala graha*.

This benefits the person by strengthening the sense organ of taste and motor organ of speech i.e. tongue.It removes the filth of oral cavity, improves salivary secretions and thereby enhances the appetite and perception of taste .

Medicinal smoking/*Dhumrapana*

Inhalation of medicinal smokes through nose or mouth has been described in Ayurveda as *Dhumrapana*.It is done for the purpose of cleansing of channels of supraclavicular region i.e. nose, throat, Eustachian tube, larynx, pharynx and also the tracheal tree.

The smoke of these herbs cleanses *kapha* from them and also regularizes the movement of *vata* in them. It benefits the person if taken in proper manner and quantity as described in Ayurvedic texts.It helps in alleviation and prevention of many diseases.

Care of ear/*Karna purana*

Following regular removal of wax from ear, instillation of two or three drops of medicated oil is advised for proper lubrication and normalization of the *vata* seated in it.It strengthens the organ of hearing, prevents many ear diseases of *vatik* type, prevents stiffness of neck and Jaw, deafness and tinnitus.

Sequence to be followed while carrying out these procedures.

Anjana followed by *Nasya*

Nasya in turn by *Kavala graha* and *gandusa*

These are to be followed by *Dhumrapana*.

As, all these procedures are aimed at regularizing *Kapha* and *Vata* of the respective organs in particular and the whole of Supraclavicular region in general and in this,the later complements the function of the former.

They remove the naturally accumulated secretions of this region and thereby prevent the blockage of subtle channels and passages also facilitate the to and fro movement of *vata* in them which is the key requirement to the proper functioning of body, sense organs and the mind as well.

Skin Care

Skin is the single largest organ of body which is the outer protective layer performing several functions like protection of the body from effects of heat, cold and pollutions; prevents the entry of micro-organisms, perception of external stimuli through tactile sensation, excretion of metabolic wastes in the form of sweat and digestion and absorption of nutrients and medicaments applied over it. According to Ayurveda, it is a seat of *vata* and *sparsanendriya* (sense organ for touch)

Abhyanga, utsadana and udvartana are some procedures to take care of the skin.

Abhyanga(Massage)

Body massage with plain or medicated oils in a specific manner is known as *Abhyanga*.Every human being needs regular oil massage just as every machinery needs regular greasing for its smooth functioning.

Special emphasis is given on head massage and massage of feet.

Benefits of *Abhyanga* are as follows:

- It makes the skin soft and unctuous
- It controls *Vata* by reducing *Vata's* cold, dry, light, rough and erratic qualities
- Its rhythmic motion allays joint and muscle stiffness and makes all body movements free and rhythmic
- Blood circulation improves which encourages quicker removal of metabolic wastes
- It absorbs the micronutrients that are present in massage oil and thereby also helps in improving bulk of muscles in cases of muscular atrophy like conditions.
- Massage also relaxes the body prior to more vigorous exercise
- Head massage is beneficial for hair, scalp, skull bones and nourishes sense organs and brain
- Massaging the feet brings firmness, good sleep and improves vision.It alleviates numbness, fatigue, stiffness and cracking of feet.

Abhyanga is contraindicated in :

- Person having aggravation of *Kapha* in their body
- Following evacuative measures like therapeutic emesis, purgation
- Person having indigestion

Appropriate time for *Abhyanga*:When a person feels appetite for food, as, this is the indication of perfect digestion and moreover at this point of time since digestive fire is ignited, it facilitates the absorption of micronutrients through skin.

***Vyayama*/Physical Exercise**

Physical exercise or *Vyayama* by definition is the act, which brings about exertion,fatigue or exhaustion in the body

- It promotes circulation and excretion of wastes mainly through sweat and burns the fat.
- It improves appetite
- It improves muscle strength and compactness and thereby improves endurance towards physical stress

- Regular exercise even reduces anxiety and produces a sense of well being.

Ayurveda suggests that exercise should be performed with rhythmic breathing as it brings the *Prana*(life force) into the body and removes gaseous wastes from it.

Quantum of Exercise

Exercise cannot benefit a person of one works to the point of exhaustion.Ayurveda's rule is that one should never exert more that half of his/her capacity i.e. *Ardha shakti Vyayama* and that too in *Kapha* predominant seasons like *Hemanta Sisira* and *Vasant Rtu* (winters and spring season) and by those who take unctuous food and are strong physically.

In rest of the seasons very light physical exercise should be carried out.

Vyayama is contraindicated in:

- Persons suffering from the diseases of *vata* and *pitta*
- Very young children and very old persons should not carryout physical exercise
- Persons having indigestion

After completion of *Vyayama* gentle massaging of body is done.Which is further followed by use of *Udvartana*(application of herbal pastes).

***Udvartana*(Application of herbal pastes)**

This procedure is of two types depending upon the herbal packs used. The one without oil/unctuous substances is *Udvartana* and the use of dry herbal powder is known as *Udgharsna*(rubbing).The latter is used after after *Vyayama* for alleviating *Kapha* and *meda*.It opens the pores and lets the sweat and sebum out and thereby cleanses the skin.

Bathing/*Snana*

Snana or bathing apart from serving the purpose of cleansing and alleviation of sweat, dirt,itching and exhaustion, also benefits a person in many different ways like:

- Stimulation of hunger
- Imparting freshness to the body thereby enhancing the spirit of a person
- Imparts aphrodisiac effect
- Alleviates burning sensation, excessive thirst and drowsiness

Ayurveda advocates the use of warm water for bath especially for lower portion of body and regular head bath with cold water.Use of hot water for hair bath is contraindicated since, it drains away the strength and luster of hair and eyes.

Bath is contraindicated after a meal and also in persons suffering from:

- Facial paralysis
- Diseases of eye, ear and oral cavity
- Diarrhoea, Distension of abdomen
- Chronic rhinits
- Indigestion, Anorexia
- Fever
- Too old persons and too hungry persons is also not advised to take full-fledged bath.For them *Sharira Marjana* i.e. sponging of the body with wet cloth is advocated.

Diet

After having taken bath, when a person feels fresh and hungry, he/she should patiently take a diet, which is of balanced nature in the sense,it should contain all six *Rasas*(Sweet, Sour, Salty, Pungent, Bitter and Astringent) in proper proportion and form (eatable, chewable, drinkable and lickable), should be freshly prepared and pleasing to the senses.Such a balanced diet can only nourish the body in a balanced way without afflicting its structural and functional integrity.

Status of *Panca Mahabhutas* (predominance of *Mahabhutas*) and predominance of *Rasas* in different seasons with status of *Tridosas*

Season	Predominant *mahabhutas*	Predominant *rasa*	Status of *Dosas*
Sisira	*Vayu + Akasa*	*Tikta*	*Kapha*
Vasanta	*Vayu + Prthvi*	*Kasaya*	*Kapha ??*
Grisma	*Yayu + Agni*	*Katu*	*Vata Kapha **
Varsa	*Prthvi + Agni*	*Amla*	*Vata ?? Pitta*
Sarada	*Jala + Agni*	*Lavana*	*Pitta ?? Vata **

Hemanta	*Prthvi + Jala*	*Madhura*	*Kapha Pitta* *

? acumulation , ?? aggravation, * pacification

1. In *Varsa*(rainy season) maximum dosic disturbance takes place.

2.*Sisira* is maximum healthy season as per natural rhythm of increase or decrease of *Doshas*.

3.*Vasant* rtu observes the *prakopa* of *kapha*.

* Hence in order to protect from the adverse effects of these natural ?(accumulation) or *(pacification) of *dosas* in the body, one has to observe certain codes of diet and lifestyle , so that these naturally enhanced dosas can be subdued and maximum amount of harmony is enjoyed. Moreover, to protect us from external environment and to fulfill the demands of internal environment thereby keeping balance between the two and, avoid loss of strength and remain fit throughout year.

***Rtucarya* / Seasonal Regimen**

Seasonal Regimen Of *Hemant Rtu*

Early Winter- Nov - Dec, Jan - Feb (according to most parts of India)

External and Internal environmental conditions	Diet		Daily Routine (Life Style)	To Be Avoided
	Property	Items		
1.Temperature Lowest		1. Warm or hot water for drinking. 2. Intake of different types of wine following intake of roasted meat of birds and animals living in burrows, and those which prey upon others for food and animals which are specially	1. Warm water for Bathing etc. 2. Body Massage. 3. Head Massage with oils. 4. High grade sudations like *Jentaka* (specially prepared concealed house for fermentation). 5. Staying in warm	

		fed for the sake of food .	house. 6. Sun bath.	
2.Humidity Maximum moisture content in air			1.Thick and warm clothing. 2.Application of herbal pastes of *Agaru*(Aquillaria agallocha),*Kumkum* (Crocus sativum)etc.	
3.Nature of wind Smooth, Cold			Staying in house which does not allow entry of direct wind.	Direct facing of wind may it be in house or while traveling.
4.Natural predominance of *Rasa* in universe *Madhura (Prthvi + Jala)*	*Amla* (sour)*Lavana* (salty)Food items			
5. Status of *Agnibala* -Maximum Appetite maximum Digestion capacity and assimilation capacity at their peak.		1. Milk and milk products, sugar cane products like Jaggery, sugar etc. 2. Food items prepared from wheat flour and Jaggery containing fats like *vasa* (muscle fat), oil 3. Rice (freshly cut) 4. *masa*(Phaseolus mungo) 5. Meat of animals		1.Light diet. 2.The diet low in nutrition quantity. 3.The diet that aggravates Vata. 4.*Udamantha:* A drink prepared from parched barely and

		having lots of fats in them and those which come from *Anupa desa* (region of *kapha* predomina nce)and are of aquatic origin.		sugar mixed in cold water.
6.Status of Physical strength - Maximum			1. Physical exercise. 2. Sex at/as much as will.	
7. Resultant status of Dosas *Kapha*(accum ulated) *Pitta*(Pacified)		People of *Kapha* predomina nt body constitution and those residing in *Anupa desa*, should practice above said recommendations by being watchful and try not to accumulate too much *kapha* in this season.	They should practice more of warm water intake, stay in warm place,do more excercise and thus keep balance.	

Seasonal Regimen of *Sisira Rtu*

Late winter Jan - Feb, Feb - March (according to most parts of India)

External and Internal environment al conditions	Diet	Daily Routine (Life Style)	To Be Avoided
1.Temperatu re Low	Since external as well as internal	--	

	Environmental conditions of *Sisira rtu* match maximum with *Hemant Rtu*		
2.Humidity slightly low	except for extra bout of dryness and coolness in body as well as atmosphere		
3.Nature of wind -Cool and Dry Overall atmosphere pleasant but dry and; cool	the advocated diet regimen remains the same but to be followed more vigorously and by mainly keeping a check on dryness and coolness	Staying in a place which does not allow direct entry of wind and is warm too and moreover all other regimens advised in *hemanta ritu*	Direct Facing of wind and cold while Staying at one place as well as while traveling
4. Naturally Predominant Rasa – *Tikta*(Bitter)			Avoid diet containing items of *Katu* (Pungent),*Tikta* (Bitter), *Kasaya*(Astringent) taste *Laghu* (Light) in property.

Vayu + *Akash*)			
5. Status of *Agnibala* - Maximum		*Vata Prakrti* people need to take extra precautions and also those who are in their old age and those who are residing in *Vata* predominant area(*Jangala desa*.)	Those dietary items which enhance Vata dosa and do not satisfy the *Jatharagni* as it may lead to burning of body tissues.
6. Status of *Dosas Kapha* – (accumulation)			
7. Status of Physical strength - Maximum			

Seasonal Regimen Of *Vasant Rtu*

Spring Season – March - April, April - May (according to most parts of India)

External and Internal environmental conditions	Diet		Daily Routine (Life Style)	To Be Avoided
	Property	Items		

1. Temperature - Moderately high		Excellent quantity wine (Moderate to mild in Nature) prepared from flowers of *Madhuca indica* and that which pleases the senses.		
2. Humidity -Relatively lower			To keep in company with loved ones Spending time in gardens.	
3. Nature of wind Moderately dry overall atmosphere pleasant because it is flowering season.			Applying herbal aromatic pastes of *candana* (Santalum album), *Agaru* (Aquillaria agallocha) etc.Garlanding remaining surrounded by flowers.	

4. predominance of *rasa* – *kasaya* (astringent) *(vayu+prthvi)*.				Avoid excess intake of astringent food items.
5. Predominence of *Dosas Kapha* – Aggravated Because *Kapha* accumulated in previous seasons i.e. *Hemanta and Sisira* gets melted with the increasing strength in sun rays and rising atmospheric temperature.		1. Honey 2. Boiled water 3. Water processed with *Musta* (Cyperus rotundus) and *Sunthi* (Zingiber officinalis) , 4. Water processed with *Vijay sara* (Ptero carpus marsupium) 5. Water mixed with honey	1. Bath with warm water. 2. *Vyayama* (physical exercise) 3. *Udvartana* (herbal paste application) 4. *Anjana*(drugs to be put in eyes) 5. *Nasya* (nasal medication) 6. *Vaman* (therapeutic Emesis).	1. Sheet (cold), *snigdha*(slimmy), *Guru* (heavy), *Madhura*,*Amla* (Sweet, sour), dietary items 2. Day time sleeping
6. Status of *Agni bala* -Minimum (very low)	*Laghu* (light) *Katu* (pungent taste) *Tikta*(bitter taste) *Rasa*	1. *Yava* (Barely) wheat preparations 2. Meat of the animals of *Jangala desa* like rabbit *(sasa)*, busterd		

		quail (*lava*),grey partridge *(tittira)*.		
7. Status of *Sarirabala* - Medium			People residing in *Anupa* des a having *Kapha prakriti* and children should be protected well.*Vyayama* should be done moderately and not vigorously.	

Seasonal Regimen Of *Grisma Rtu*

Summer Season – May- June, June - July(according to most parts of India)

External and Internal environmental conditions	Diet		Daily Routine (Life Style)	To Be Avoided
	Property	Items		
1. Temperature - Maximum	*Sita* (cool),*drava* (liquid)	Drinking water should be naturally cool and should be derived from sources like river,	Staying in cool place which is protected from direct sunlight during day time.	1. Direct sun rays. 2. Hot food and drinks. 3. Wine.

		lake and well.		
2.Humidity Lowest		Diet rich in water content.		
3. Nature of wind -Dry and Hot -Overall atmosphere -Exhausting and tiring		1. Drinks prepared from sugar and water which is cooled by keeping in earthen pot. 2. Special drinks prepared from parched barely mixed sugar and cool water. 3. Fruits and Juices , grapes etc. 4. Fruits having maximum water content. 5. Coconut water.	1. Taking afternoon sleep in cool and soothing atmosphere / place. 2. Sleeping under the sky in airy place during night. 3. Enjoying cool breeze of air coming naturally from trees preparing fans for airing from leaves of big trees. 4. Wandering in gardens remaining surrounded by flowers and watery places. 5. Garlanding and wearing precious stones and pearls that sooth and please the mind and body.	Wine can be taken with ample of water if one is strongly habituated

			6. Light clothing that avoid retention of heat in body. 7. Applying thin herbal paste of *Candana*(Santalum album) etc.	
4.Predominant *Rasa* -*Katu (Vayu + Agni)*				*Katu*(Pungent),*Amla*(Sour),*Lavana*(Salty) Food
5. Status of *Agni bala* Relatively Lower	Light diet	1. Sali Rice, Sugar, Meat soups. 2. Light and cooling pulses like *Munga* (Vigna radiatus). 3. Meat of animals from *Jangala Desa* ie. those which are easy to digest.		
6. Naturally predominant *Dosa*	*Madhur Rasa*	Intake of milk and		

Vata (accumulated) *Kapha* (Pacified)		ghee is advocated		
7. Status of physical strength *(Sarira bala)* -Lowest				Physical exercise, Sex

Varsa Rtu

Brief Description of atmospheric conditions affecting Internal environment

With previous hot season i.e. *grisma ritu*, and sudden appearance of clouds and rainwater brings out all the heat conserved in earth, which leads to hot fumy atmosphere.This in turn further diminishes the digestive fire, which facilitates the aggravation / vitiation of all three dosas.Moreover, continuous rainfall favours the predominance of *Amla Rasa* in universe, in food, as well as in medicines.Therefore overall there is delicate condition of all three dosa in rainy season and hence Moderate regimen that pacifies all three and does not aggravate any of them is strongly recommended. *Vata Prakrti* persons, old age person should be specially protected and given special regimen of *Vata* like *Basti* (medicated enemas).

Seasonal Regimen Of *Varsa Rtu*

Rainy Season – July - Aug, Aug - Sept(according to most parts of India)

External and Internal environmental conditions	Diet		Daily Routine (Life Style)	To Be Avoided
	Property	Items		
1. Temperature Low		Intake of food and drinks With honey mixed in them in	Staying in clean and dry place which does not allow	Staying in a place, which has

		appropriate quantity	the entry of rain water or moisture	direct entry of cool wind and moisture
2. Humidity Maximum			Also the one, which protects from the entry of insects and animals that appear in rainy season.	1.Sleeping in open space, under the sky. 2.Direct contact with Rain.
3. Wind nature- Moist and Cool Overall atmosphere full of moisture and cold.		Honey also to be mixed with lighter variety of wines (prepared from *Madhuca)* and hydro-alcoholic preparations made from medicinal herbs *Aristas*.	1. Rubbing of body with dry herbal pastes of *Agaru* (Aquillaria agallocha). 2. Clothing should be light and clean. 3. Garlanding or applying fragrant herbal pastes.	1. Excessive drinking of water or other drinks or diet rich in liquids. 2. Drinking river water 3. Naps.

4. Natural predominant *Rasa* – *Amla (Jala + Agni)*		Drinking water should be the one which is stored one or which has undergone filtration through natural method and the one which is boiled properly and cooled before drinking.		
5. Predominant *Dosa Vata*– (aggravated) *Pitta*– (accumulated)	*Amla* (sour) *Lavana* (salty) *Rasa* (Taste) *Snigdha* (Slimy and unctuous) food specially on cold & rainy day.	Meat soups processed with ghee and other digestion promoting drugs.	*Vasti karma*(course of medicated enemas)after proper evacuation by therapeutic emesis and purgation to alleviate *Vata dosa*.	1. Special drink prepared from Parched barley mixed with sugar and cool water. 2. Direct contact with sun rays.

6. Status of *Agnibala* - Minimum	*Snigdha* oily and unctuous diet.	Light and nutritious diet prepared from barley, wheat, stored sali rice gruels processed with meat soups that are prepared from meat of animals of *Jangala desa* and hence lighter to digest.		
7. Status of physical strength *(Sharira bala)* -Minimum				1. Physical Exercise. 2. Excessive and Brisk walking. 3. Indulgence in Sex.

Seasonal Regimen Of Sarad Rtu

Autumn – Sept - Oct, Oct - Nov(according to most parts of India)

External and Internal	Diet	Daily Routine (Life Style)	To Be Avoided

environmental conditions				
	Property	Items		
Temperature -Moderately Low		Using Pure and clear water *Hansodaka* for drinking.	- Using *Hansodaka* for bathing.	Day time Sleeping.
2.Humidity - Medium			Light, clean and Pleasant clothing	
3.Nature of wind moderately Cool & Smooth, Not very dry,Overall atmosphere soothing.				Direct facing of wind.
4.Natural predominance of *Rasa* – *Lavana* (Salty)*(Prthvi + Agni)*				Diet containing excess salt or salty items.
5.Status of *Dosas* *Pitta* – (aggravated) *Vata* – (Purified) Due to sudden appearance of Sunny days	Sweet and bitter taste,light and cool food items.	1. Use of medicated *ghrtas* (clarified butter)processed with bitter *tikta* drugs in cooking or direct eating. 2. Use of vegetables like *Parval* (Trichosanthas dioica). 3. Fruits like *Draksa*	1. Therapeutic purgation and blood letting for removal of aggravated *pitta*. 2. keeping surrounded by pleasant	1. Sun bath. 2. Alkaline substances. 3. Hot substances. 4. Strong wine. 5. Spicy food substances

following cool & moist rainy season,*Pitta* gets aggravated		*Amalaki* for eating or for preparing beverages.	things like gardens, fountains, natural water falls, flowers. 3. Keeping in company of beloved ones, young children and family & friends. 4. Enjoying the contact of moon beams in first part of night.	
6.Status of *Agnibala* -Medium	*Laghu* (Light)Tikta Rasa bitter taste)Food	1. Taking food only after appropriate feeling of hunger. 2.Consuming food items made of *Yava* (barley), *godhuma* (wheat) *Sali* rice , *Sasti* Rice ,(Oryza sativa),*Mudga* (Vigna radiatus). 3.Vegetables like *Parvala* (having bitter taste). 4. Meat of animals who have *Vata* Predominant in their origin *Jangala Desa* hence lighter to digest.		1.Excessive eating. 2. Fats, oils 3. Curd 4. Heavy quantity and quality of meals. 5. Meat of animals belonging to *Anupa* desa (region of *kapha* predominance) and of aquatic origin.
7.Status of physical strength *(Sar*		Persons having *Pitta* predominance in their basic constitution should take extra		

ira Bala) - Medium		precautions must undergo therapeutic purgation to cleanse the body of excess Pitta		

Summary

Grisma,Hemanta & Sisira are three seasons where in there is no excess aggravation of any of three dosas and only accumulation of *Vata & Kapha* occurs respectively.So, internal environment is not very disturbed.But here External environment plays crucial role in designing of regimen. The environmental conditions plus regimen followed to overcome the effect, or say, to fulfil the requirement generated in the body due to extreme heat (in *grisma*) and extreme cold that the accumulation of these dosas is favoured.Where as, in other three seasons like *Varsa*, *Sarad* and *Vasanta* there is aggravation of *Vata*, *Pitta* and *Kapha dosas* respectively due to external environment prevailing during these seasons and more so because the previous season resulted in accumulation of these three and sudden change of environmental conditions, which appear during these seasons, favour the outburst of the accumulated *dosas* and they get aggravated during respective seasons. And therefore it has been said in Ayurveda, that at the period of junction of two seasons i.e. last week of passing season and first week of arriving season, which is called as *Rtusandhi*.One should follow the mix regimen of both seasons in tapering off and switching on manner to avoid the consequence of abruptness of season as well as of regimen.

Drugs in Ayurveda

याः फलिनी र्या अफला अपुष्पा याश्च पुष्पिणीः । बृहस्पतिप्रसूतास्ता नो मुञ्चन्त्वंहसः ॥१५॥

Let fruitful plants and fruitless, those that blossom and blossomless, urged onwards by Brihaspati, release us from pain and grief.

Drug is a substance that can be used for the treatment of ailments. *Bhavaprakasa* defines drug as a substance, by which the physician cures the disease. According to *Caraka Samhita* there is no substance in the world, which cannot be used as a drug, when used rationally and with a definite

objective *(Nanausadhibhutam)*. Commonly, the drugs are derived from natural sources comprising of plants, animal parts and their products, marine products, metals and minerals. *Caraka* in *Vimanasthana* gives an outlay of the criteria for the selection and use of various substances used in the treatment of disease as:

1. *Prakrti*-nature of substance

2. *Guna*-quality of substance

3. *Prabhava*-specific action

4. Desa-place of their growth /production and use

5. *Rtu*-season of collection

6. Manner and method of their preservation and storage

7. Methods of preparation of medicaments

8. *Matra*-dosage

9. Modes of administration

10. The persons for whom they are indicated

11. Their capabilities of exciting or alleviating the *Dosas*

12. If there are other substances that possess similar virtues, they may also be considered for use after examining them carefully.

Caraka in *Sutrasthana* describes the qualities of ideal drug –having abundant supply (*Bahuta*), wide applicability (*Yojnyatva*), can be prepared in many forms and by different processes (*Anekavidha kalpana*) and is dependable with valuable qualities (*Sampat*).

These medicines are given both for preventive (including conservative, preservative & restorative) and curative purposes. Drugs comprising of plants are abundantly used in *Ayurveda*. There are about 17,000 flowering plant species in India out of which more than 2000 are known to have medicinal properties.

Like any other science, *Ayurveda* had never been static. Its practitioners had been innovative and dynamic in their therapeutic practice, discovered newer medicines by combining principles and clinical trials. In *Vedic* period, mainly plants were used as

medicine but, later gradually the use of metals, minerals, marine and animal derivatives (in their purified and calcined forms) became popular in practice; as these could be stored for longer period, required less dosage, were fast acting and with multiple indications.

However, some drugs could be toxic or have undesirable effects. Various methods were developed to reduce their toxic effects and enhance therapeutic properties. For example - *Semecarpus anacardium (Bhallataka)* fruits after removing the attachment of the thalamus are soaked in cow's urine for seven days followed by cow's milk for seven days. They are then put into a bag containing coarse brick powder with which they are rubbed carefully, to reduce the oil content. The fruits are then washed with water and dried in air. Likewise, *Realgar (Manahsila)* is purified by triturating it seven times with expressed juice of *Sesbania grandiflora* leaves *(Jayanti)* or *Zingiber officinale* rhizome (*Srngbera*) for making it suitable for medicinal use.

Five basic dosage forms (expressed juice, powder/ paste, decoction, cold and hot infusions) are described which are used alone or with conjunction of other traditional processes for preparing various medicines. *Caraka* has described 128 general dosage forms e.g. eye drops *(Ascyotana)*, tablet *(Vati)*, meat soup *(Mamsa rasa)*, butter milk *(Takra)*, etc

Recently the popularity of *Ayurvedic* drugs has increased globally because of its safety, lack of side effects and for its ability to eliminate the root cause of disease etc. For this reason several pharmaceutical companies mushroomed and excessive exploitation of natural resources took place and the standards of pharmaceutical drugs came in question. Maintenance of quality Ayurvedic drugs with such diverse ingredients in today's world poses a challenge. To achieve this, cultivation and afforestation efforts are taking place rapidly; Researches to revalidate the claims of efficacy of drugs and development of new forms of drugs are being conducted, Pharmacopoeias such as "The Ayurvedic Pharmacopoeia of India" and "The Ayurvedic Formulary of India" have been published and "Good Manufacturing Practices" (GMP) have been enforced in order to ensure quality control of Ayurvedic drugs.

Cosmetics

Ayurveda being the Science of life has also emphasized upon its importance by saying, good looks help in boosting the psychological state of mind and makes person feel good

about oneself. It has described very systematically, the measures to attain it,maintain it and also to enhance it through proper diet and nutrition, serenity of mind,and other specific measures to take care of different aspects of beauty like :

- Complexion
- Hair care
- Care of Eyes
- Foot care
- Well proportionate growth of body parts
- Most importantly the post surgical or post pregnancy or post inflammatory conditions of different body parts involved like scratch marks
- Post inflammatory hypo/hyper pigmentation
- Post surgical marks,loss of normal texture and body contour are all taken care in Ayurveda with different local medicaments to improve the aesthetic value of the parts involved.

Beauty Management through Ayurveda

Diet and nutrition

Intake of a balanced diet in terms of nutrients as well as physical form,and its proper digestion and assimilation in the body so that it can nourish all the parts of body to give rise to a healthy body and hence healthy appearance is emphasized in Ayurveda. Since,skin reflects the health of a person, it cannot look healthy and beautiful unless it is properly nourished.

Mode of life

Regular cleansing of body both internal and external as well as of mind (through meditation) helps clear up the toxins of internal as well as external environment along with some toning up procedures for body and skin like regular physical exercise yogasanas (specific body postures),body massage,facial massage,foot massage also enhance the beauty.

Through Social behavior

By following *Acara Rasayana* one can enjoy positive social life and hence also pleasant psyche.As,good social conduct develops good social atmosphere around a person and this helps keeping positive state of mind as well as social surrounding.In the absence of it person remains tensed leading to vitiation of *Vata* giving rise to dull and lustreless face, various abnormal presentations like early graying of hair.

***Rasayana*(Health promoting drugs or measures)**

They enhance the quality to each and every tissue of the body bringing about clarity of complexion excellence of lustre,optimum strength of physique, promote growth of hair,make every tissue more enduring towards external pollution and increase their strength and beauty.

Specific Measures For Enhancement Of Different Aspects Of Beauty

There are several topics related to beautification in Ayurveda of which following are described briefly :

1. Skin Care *(Varnya)*

Varnya *is the group of drugs, which have complexion promoting action*

- *Useer*(Vetiveria zizanioides)
- *Sveta candana*(Santalum album)
- *KumKum*(Crocus sativus)
- *Ketaki*(Pandanus odorotissimus)
- *Punnaga*(Calophyllum inophyllum)
- *Padmaka*(Prunus cerasoides)
- *Madhuka*(Glycyrrhiza glabra)
- *Manjistha*(Rubia cordifolia)
- *Sariva*(Hamidesmus indicus)
- *Payasya*(Ipomoea digitata)
- *Sita*(Cynodon dactylon)
- *Haridra*(Curcuma longa)

In Indian tradition,use of various ointments *(lepa)* is in customs.Certain herbs and pulses are grinded with simple addition of milk, water or rose water and a face pack is made for promoting complexion.

2. Hair Care *(Kesya)*

Kesya is the group of herbs and animal products, which have beneficial action on the hair in terms of their length, strength and texture.e.g. *Bhringaraj*(Eclipta alba),*Hasti danta masi*(Ash of elephant ivory),*Narikela* (Cocos nucifera).

3. *Hair Dye(Kesa Ranjana)*

Hair dyes are very popular since ancient times. Following are well described in Ayurveda

- *Bhringaraj*(Eclipta alba)
- *SikaKai*(Acacia concinna)
- *Ritha*(Sapindus trifoliatus)
- *Nilini*(Indigofera tinctoria)
- *Amalaki*(Emblica officinalis)

4. Eye Care *(Netra Prasadana)*

Eyes are very important from cosmetic point of view and in Ayurveda there is mention of use of 5 types of collyrium *(anjana)* to increase the beauty of it.

5. Herbs For Acne*(Yuvana Pidika Nasana)*

Acne is effectively treated by many herbal formulations. e.g. local application of paste of

- *Vaca*(Acorus calamus),*Lodhra*(Symplocos racemosa),*Saindhava(Rock salt)* and *Sarsapa* (Brassica compestris)
- *Dhaniya*(Coriandrum sativum),*Vaca*(Acorus calamus),*Lodhra*(Symplocos racemosa)and *Kustha*(Saussurea lappa)
- *Narikel manjari*(Twig of Cocos nucifera) and *Vata patra*(Ficus benghalensis)
- *Gorocana*(Bovine gall stone/Bezoar) and black pepper
- *Salmali Kantak*(Thorn of Salmalia malabarica)

Post inflammatory scars also get cleared by them.

6. Foot Care *(Vipadikahara Yoga)*

Vipadika (Rhagades)is a disease of palm and sole in which there are many crack marks along their edges.These are effectively treated by *vipadikahara taila* (an ointment).

7. Deodorants (gandha Dravya)

There are certain herbs, which are used for fragrance and to avoid foul body odour e.g

- *Sveta candana (Santalum album)*
- *Kumkuma(Crocus sativus)*
- *Distilled products of Rose, Jasmine(Mongra) etc.*

These are applied in the form of paste *(Alepa)* or *Arka* (Perfumes) over the body.

8. Breast Growth Enhancer (*Stana Vriddhikar* And *Stana Dadhyakar Yoga*)

There are few herbal formulations described in *Ayurveda*, which are specifically used for proper development of breast and tightening of it; e.g.

- *Methi modaka*
- *Saubhagya sunthi*
- *Mundi tailam and Munditail nasyam*
- *Maricadyam tailam*
- *Dadimadyam tailam*
- *Ksirparni tailam*

9. Removal Of Post Pregnancy Stretch Marks (*Kikkisa Hara Yoga*)

Post pregnancy marks are also a very embarrassing problem for women and to remove it *Ayurveda* describes few pastes for local application;e.g.

- *Sveta candana (Santalum album) and mrinala(Nelumbium nuciferum)*
- *Dhataki(Woodfordia fruticosa),Sirisa(Albizia lebbeck), Sarsapa (Brassica campestris) and Usira(Vetiveria zizanioides)*
- *Irrigation of breast and abdomen by decoction of Patola(Tricosanthes dioica), Nimba(Azadirachta indica), Manjistha(Rubia cordifolia) and Surasa (Ocimum sanctum).*

10. Cosmetic Correction Of Scar Tissue

The healing of wound always takes place by formation of scar tissue, and some times this scar tissue may lead to bad look when formed over exposed body parts. Susruta the ancient surgeon of India propounded eight unique measures to combat this as given below:

(i) *Utsadana* – means 'elevating depressed wounds' by applying the paste of *Apamarga* (Achyranthes aspera),*Asvgandha*(Withania somnifera) with clarified butter and should be taken in diet flesh of carnivorous animals.

(ii) *Avsadana* – means 'depressing the raised wounds' by applying paste of Kasisa(Ferrous sulphate) with honey.

(iii) *Mridu karana* means 'softening of the hard wounds' by blood-letting, unction with warm salty drugs.

(iv) *Daruni Karana* – means 'hardening of the soft wounds' by applying the paste of *Dhava*(Anogeissus latifolia),*Asoka*(Saraca asoca),*Priyangu*(Callicarpa

macrophylla),*Rohini* (Soymida febrifuga),*Triphala* (three fruits of Emblica officinalis,Terminalia chebula,Terminalia bellerica),*Dhataki* flowers (Woodfordia fruticosa),*Lodhra* (Symplocos racemosa)*Sarjarasa* (Exudate of Vateria indica).

(v) *Krishni Karana* – means 'Blackening of the white scar tissue' by use of *Bhallataka* oil(Semicarpus anacardium)mixed with ash of hoofs of domestic and marshy animals.

(vi) *Pandu Karma* – means 'whitening of the black scar tissue' by applying paste of Rohini fruit (Soymida febrifuga)with goat's milk or by applying powder of new earthen ware, roots of *Vidula*(Barringtonia acutangula) and *sarja* (Exudates of Vateria indica),*Kasisa*(Ferrous sulphate) and *Madhuka* (Madhuca indica) with honey.

(vii) *Roma Sanjanana* – means 'enhancing growth of hairs on bare areas' by applying paste of Ash of elephant tusk and *rasanjana*.

(viii) *Roma Satana* – (Depilatory),means removing hairs from unwanted places by applying paste of conch shell,orpiment and sour gruel or *Bhallataka* oil(Semicarpus anacardium) with latex of Snuhi (Euphorbia neriifolia).

11. Sandhana vidhi (Cosmetic Surgical Correction)

Susruta, for the first time, explained the techniques of surgical correction (Plastic surgery) of injured and amputated body parts like nose, ear and lips,and the cosmetic correction of developmentally malformed.

Diet

Food is the vital breath of living being, the most essential thing for maintainance of life. Good physical strength, intellect, complexion, cheerfulness, good voice, happiness, contentment are all dependent on food.

There has been a continuous increasing interest towards *Ayurveda*, specially for guidelines regarding healthy food and food habits and hence needs exploration of the hidden knowledge written in the texts. Consumers desire about the balanced diet and better quality of food.Good quality food contains a high proportion of a valued ingredient and provides the necessary contribution to a nutritionally balanced diet.

Healthy nutrition is served with many functional foodstuffs, fortified foods and dietary supplements introduced in the food market.Public action is needed to promote and protect the health of the population using dietary guidelines and prevention measures for good nutrition.

There are specific dietetic preparations like *Yavagu, Krisara, Manda, Peya, Yusha* etc which are easily digestible and have curative effects also. Such preparations are advised to be administered to diseased persons and after carrying out certain therapeutic procedures where person needs more nutrition with least digestive load.

In ancient classic *Carak Samhita* described the food substances according to groups such as:

1. *Suka Dhanya Varga* (Group of Awned grains) : This group mainly contains cereals like Sali Rice, *Sastika* Rice (Oryza sativa), *Yava* (Barley), *Godhuma* (wheat).

2. *Shamidhanya Varga* (Group of Legumes) : This group mainly consists of pulses e.g. *Mudga* (green gram), *Masa* (Black gram), *Rajamasa* (kidney bean), *Kulattha* (horse gram), *Canaka* (gram), *Masura* (lentils), Pea, *Tila* (sesame)etc.

3. *Mamsa Varga* (Group of various kinds of Meat) : This is further classified on the Basis of animals' habitats into several groups such as *Prasaha* (who take their food by snatching), *Ambucarina* (which move on waters), *Anupa* (those living in marshy lands), *Pratuda* (those who eat while striking)as these have got different pharmacotherapeutic effects on body and they are mentioned to be used in specific disorders

4. *Saka Varga* (Group of vegetables) : Different vegetables are described with their parts to be used along with their effects on body and hence their use in specific disease conditions. e.g. ripe fruit of *Kusmanda* (Benincasa hispida) is sweet, sour, light, diuretic, laxative and alleviates all dosas

5. *Phala Varga* (Group of Fruits): e.g. *Draksa* (Grapes), *Karjura* (dates), *Parusaka* (Grewia asiatica), *Madhuka* (Madhuca indica), *Narikela* (coconut), *Jambu* (Syzygium cumini), *Amalaki* (Emblica officinalis), *Tinduka* (Diospyros tomentosa), *Dadima* (pomegranate), *Vrksamla* (Garcinia indica) are described with their effects on body and hence accordingly their use is advised.

6. *Harit Varga* (Group of Salad) :
e.g. *Ardraka* (Ginger), *Jambira* (Lemon), *Mulaka* (Radish), *Yavani* (Trachyspermum ammi), *Dhanyaka* (Coriandrum sativum), *Palandu* (Onion), *Lasuna* (garlic) etc are described along with their effects on *Tridosas* and the body as a whole.

7. *Madya Varga* (Group of Fermented Liquors) : *Sura* is beneficial for those who are emaciated, suffering from obstruction in Urine, Malabsorption syndrome (grahani) and piles. It alleviates *Vata* and useful in deficiency of lactation and anaemia. *Madira,*

Jagala, Arista, Sarkara, Pakwasara, Sitarasika, Gauda, Surasava, Madhvasva, Maireya Asava, Madhu, Sura Madhulika, Sauviraka etc the different types of liquors with different actions and uses.

8. *Jala Varga* (Group of various types of water) : Basically all water is of one type i.e. the one which falls down as rain from the sky. Water while falling down from the Sky and coming in contact with the moon, the air, and the Sun, gets impregnated with the properties of cold, hot, unctuous, non-unctuous etc. The ultimate properties depend on place and time. The rainwater has, by nature, these six qualities i.e. cold, pure, wholesome, palatable, clean and light. Others (river, well, ponds water etc) impart different properties depending on their source.

9. *Gorasa varga* (Group of Milk and Milk Products) : e.g. Milk of cow, buffalo, camel, mare, goat, sheep, she elephant, human characteristics of these milk are well described in *Ayurveda*. *Dadhi* (Curd), *Takra* (buttermilk), *Ghrita* (clarified butter), Butter etc. are Milk Product with different actions and uses with respect to dose, time and place of living.

10. *Ikshu varga* (Group of Sugars/Honey) : e.g. Juice of Sugarcane, *Guda* (Jaggery), *Khanda* (sugar), Honey etc fall under this group.

11. *Kritanna Varga* (Group of Dietary preparations) : This includes *Ayurveda* recipes like *Peya, Vilepi, Manda,* (Liquid gruel);Sattu floor of fried paddy) etc with their method of preparations and effects on body.

12. *Aharayogi Varga* (Group of adjuvants of food) : As the name suggests it includes items which are used as adjuvants for cooking e.g. Oils of different sources like *Tila* (sesame), *Sarsapa* (brassica), *Priyala* (Buchanania lanzan). There is no certainty or limitation of the attachment to particular adjuvant of food.

Specifications regarding selection of food item

1. Cereals and legumes are recommended for use when they are one year old. The old one is mostly rough and light while the new one is mostly heavy.

2. The crop, which comes shortly, is regarded as lighter.

3. The legumes, when dehusked and properly fried digest easily.

4. Meat of animals who died natural death, who are emaciated, too much fatty, too old, too young, killed by poisons, bitten by snakes, tigers, etc should be discarded. Meat of animals other than the above is wholesome and promotes bulk as well as strength of the body.

5. Meat soup is nourishing and Hrdya (Beneficial for heart). This is regarded as nectar for those suffering from phthisis, during convalescence and for the emaciated and for those having diminished semen and are desirous of strength and lustre.

6. Vegetable,which is affected by insects, wind and sun, dried, old, off-season, not cooked with fat and unhygienic should be discarded.

7. Instructions regarding salads are according to the respective items except cooking.

8. The drinks taken after meals should be contrary to the properties of food not so to dhatus(body tissues).

Dietetic Incompatibilities

The substances which are contrary to *deha dhatus* (body tissues) behave with *virodha* (antagonism) to them. This antagonism may be in terms of properties, combination, processing, place, time, dose etc. or natural composition.(Antagonistic as part of food, which is mostly used).e.g

1. One should not take fish with milk. (Combination of both of them is *Madhura rasa, Madhura Vipaka, Mahabhisyandi* (great obstructer for the channels), because of *Sita* (milk) and *usna* (fish) i.e. *viruddha virya* (antagonistic in terms of virya).Due to conflicting viryas, it initiates blood and due to mahabhisyandi it creates obstruction in channels.The entire drug or diet, which excites the dosa but does not eliminate it, out of the body, becomes harmful.

2. For the person in arid zone *(Jangala Desa)* rough and sharp substances, and in marshy region *(anupa desa)* unctuous and cold ones are known as antagonistic in respect of place.

3. If one takes rough and cold etc, in the winter and pungent, hot etc in the summer it is antagonistic in terms of time.

4. Honey and *grhita* (Clarified butter) taken together in equal quantity is antagonistic in dose.

5. The use of sweet, cold etc by a person accustomed to pungent, hot etc is antagonistic in suitability.

6. Use of diet, drug and behavior which is similar to *dosas* in properties but adverse to the person's practice is antagonistic to dosas.

7. When the edible food items becomes poisonous by particular processing such as in case of peacock's meat attached to the castor stick, it is known as antagonism in processing.

8. Antagonism in richness (of qualities) is that if there is immature or over mature or damaged rasa in a substance.

9. It is antagonism in rules if the food is not taken in clean and hygienic place.

Adverse Effects of Antagonistic food items on body

Antagonistic food is the cause of impotency, blindness, erysipelas, ascitis, insanity, fistula-in-ano, fainting, necrosis, tympanitis, spasm in throat, anaemia, amavisa, leucoderma, leprosy, *grahani roga* (Sprue/Malabsorption syndrome), oedema, acid gastritis, fever, rhinitis, genetic disorders and even death.

Therapeutic Measures to Eliminate Adverse Effects

These are the measures, which are used to counteract the above and other disorders caused by antagonism. Such as emesis, purgation, use of antidotes. For pacifying and prior conditioning of the body with similar substances.

Diet Design

There are eight specific factors regarding diet, which are to be taken into consideration before designing the diet for a person to derive best of its effects.

1. Nature of food i.e. basic properties of food e.g. by nature green gram is light and also gray partridge.

2. Processing : by processing, the heavy ones becomes light and vice versa such as *vrihi* becomes light when transformed into *laja* (parched grains) after frying. On the other hand flour of roasted grains becomes heavy when processed to form cooked bolus.

3. Combination of different dietary items.

4. Quantity of individual item of food as well as the food as a whole.

5. Place

6. Time

7. Direction of use

8. User selection of item of food should be done on the basis of suitability or unsuitability to the user.

The prescribed method for healthy eating

1. One should take food only after the previous food is digested and that too in proper quantity. In Ayurveda the quantity of food differs from person to person which is determined by his/her digestive capacity. Also the physical form of food is given importance i.e. one should take solids and liquids in 1/3 rd amount each of the total capacity of intake and leave 1/3 rd empty for proper movement and tridosas to act upon it.

2. One should eat warm (freshly prepared) and unctuous food.

3. One should select the combinations which are not antagonistic.

4. One should ensure proper hygiene of place before eating alongwith all the favourable accessories.

5. One should not eat too fast or too slow.

6. One should eat food with full concentration and avoid laughing and talking while eating.

Biocides & Fumigants in Ayurveda

Biocides & fumigants play an important role in agriculture, industry and health. They contribute to the conservation and durability of a multitude of raw materials and manufactured products during production, storage and final use. In Ayurveda, there are many such measures described in the management of individual and social health & disease.

In Carakasamhita(CarakasaL̓hitˇ) an independent chapter dealing with Janapadodhvamsa(JanapadodhvaL̓sa) (epidemics) has many such references dealing with measures for the purification of air, water and soil. These measures can be broadly grouped under preventive and curative measures. These are aimed at control and elimination of harmful macro & microorganism e.g. use of preservatives for drugs, food, beverages; use of fumigants to kill or drive away the harmful pathogens and insects etc. However, these natural biocides and fumigants are mostly scattered in the context of control and treatment of various diseases and very few of them have been studied on modern scientific parameters for their nature and mode of action. These plant, animal or mineral derivatives usually appear to have some common property e.g. they possess strong bitter or pungent taste, strong unpleasant smell and a few are poisonous, if consumed in sufficient quantity.

In terms of protection from and prevention of disease or unwanted harmful animals and insects we find use of certain trees and plants e.g. Nimba (*Azadirachta indica* A. Juss.), Tulasi (*Ocimum sanctum* Linn.), Vanatulasi (*Ocimum basilicum* Linn.) in and around houses, evening fumigation of house with Nimbapatra (leaves of *Azadirachta indica* A. Juss.), Sarsapa (seeds of *Brassica campestris* Linn.),Sarjarasa (exudates of *Shorea robusta* Gaertn. f.), Hingu (exudates of *Ferula foetida* Regel) etc. on charcoal or cow dung fire to repel insects, or purify the places like Vranagara (operation theater),

Sutikagara (puerperal chamber). Fumigants are also used in disinfecting the fermentation pots used for Asava & Arista.

There are several Dhupana (fumigation) formulations to combat foul smell emanating from Vrana (wound), Yoni (vagina), Gatra (body). Fumigants were also used to disinfect the atmosphere and various Dhupa (fumigants) e.g. Dasangadhupa and other Havisa (oblation for burning) of Ghrta (clarified butter), Guggulu(exudates of *Commiphora wightii* Bhandari), Devadarukastha (woods of *Cedrus deodara* (D.Don) G.Don) etc. were used whenever some epidemic broke out in the villages.

For the prolong preservation of potency and prevention from getting rotten; the drugs & dietary items were extensively stored in or formulated with Ghrta (clarified butter), Taila (vegetable oil), honey, Asava/ Arista.

Caraka in Sutrasthana 3rd chapter (Aragvadhiyam) has described 32 Lepa & Pradeha (drugs for local application) consisting of various drugs including formulations in the management of skin affections like scabies, eczema, leprosy etc. There are fifteen Kusthahara (curing skin diseases including leprosy) formulations and in each group some drugs are biocides while others are soothing or healing agents. There is one Sarira-daurgandhahara (remover of foul smell from body) Pradeha (drugs for local application) also. There are many Lepa, Pradeha (drugs for local application) and drugs to be worn on the body of an infant to cure some of the Grahabadha (Paediatric idiopathic syndrome) of the infant.

Likewise in Sutrasthana 4th chapter there are Kusthaghna (drugs curing skin diseases including leprosy), Kandughna (drugs curing skin diseases with itching), and Krmighna (anthelminthics) Mahakasaya (great decoctions) that consist of biocides as well. These are enumerated as Khadira (*Acacia catechu*(Linn. f.) Willd.), Haritaki (*Terminalia chebula* (Gaertn.) Retz.), Amalaki (*Phyllanthus emblica* Linn.), Haridra (*Curcuma longa* Linn.), Bhallataka (*Semecarpus anacardium* Linn.f.), Saptaparna (*Alstonia scholaris* (Linn.) R. Br.), Aragvadha (*Cassia fistula* Linn.),Karavira (*Nerium indicum* Mill.), Vidanga (*Embelia ribes* Burm. f.) and Jatipravala (young leaves of *Jasminum officinale* Linn.) being Kusthaghna (drugs curing skin diseases including leprosy).

Candana (*Pterocarpus santalinus* Linn. f.), Nalada (*Vetiveria zizanioides* (Linn.) Nash), Aragvadha (*Cassia fistula* Linn.), Naktamala (*Pongamia pinnata* (Linn.) Pierre), Nimba (*Azadirachta indica* A. Juss.), Kutaja (*Holarrhena antidysenterica* (Roxb. ex Flem.) Wall. ex DC), Sarsapa (seeds of *Brassica campestris* Linn.), Madhuka (*Glycyrrhiza glabra* Linn.), Daruharidra (*Berberis aristata* DC.) and Musta (*Cyperus rotundus* Linn.) as Kandughna (drugs curing skin diseases with itching).

Aksiva (*Moringa pterygosperma* C.F. Gaertn.), Marica (fruits of *Piper nigrum* Linn.), Gandira (*Coleus barbatus*(Andrews) Benth.), Kebuka (*Costus speciosus* (Koen. ex Retz.) Smith), Vidanga (*Embelia ribes* Burm. f.), Nirgundi (*Vitex negundo* Linn.), Kinihi (*Albizia procera* (Roxb.)Benth.), Goksura (*Tribulus terrestris* Linn.), Vrsaparnika (*Ipomoea maxima* (Linn.f.) G.Don.), and Akhuparnika (*Merremia gangetica*(Linn.) Cufodont) as Krmighna(anthelmintics).

In Susrutasamhita sutrasthana chapter-38 (Dravyasangrahaniya) the Arkadigana plants viz. Arka (*Calotropis procera* Dryand ex W.Ait.), Alarka (*Calotropis gigantea* (Linn.) Ait.f.), Karanjadvaya (*Pongamia pinnata* (Linn.) Pierre), & (*Holoptelea integrifolia (Roxb.) Planch*.), Nagadanti (*Croton oblongifolius* Roxb.), Mayuraka (*Achyranthes aspera* Linn.), Bhargni (*Clerodendrum divaricatum* Jack), Rasna (*Pluchea lanceolata* Oliv. & Hiern), Indrapuspi (*Gloriosa superba* Linn.), Ksudrasveta (*Albizia lucida*Benth.), Mahasveta (*Albizia procera* (Roxb.) Benth.), Vrscikali (*Pergularia daemia* (Forsk.) Chiov.), Alavana (*Celastrus paniculatus* Willd.) and Tapasavrksa (*Balanites aegyptiaca* (Linn.) Delile) are said to have the property to cure Krmi (worms), Kustha (skin diseases including leprosy) and Vranavisodhana (wound cleansing & purifying).

The Surasadigana plants viz. Surasa (*Ocimum sanctum* Linn.), Svetasurasa (*Ocimum canum* Sims.), Phanijjaka (*Origanum majorana* Linn.), Arjaka (*Orthosiphon pallidus* Royle ex. Benth.),Bhustrna (*Cymbopogon martini* (Roxb.) Wats.), Sugandhaka (*Leucas martinicensis* R.Br.), Sumukha ('Br*assica juncea* (L) Czern.),Kalamala (*Ocimum basilicum* Linn.), Kutheraka (*Ocimum basilicum*Linn.), Kasamarda (*Cassia occidentalis* Linn.), Ksavaka (*Centipeda minima* (Linn.) A.Br. & Aschers), Kharapuspa (*Origanum*specy),Vidanga (*Embelia ribes* Burm. f.), Katphala (*Myrica esculenta*Buch.-Ham. ex D. Don), Surasi (*Limonia crenulata* Roxb.), Nirgundi (*Vitex negundo* Linn.), Kulahala (*Sphaeranthus indicus* Linn.), Undurukarnika (*Merremia gangetica* (Linn.) Cufodont), Phanji (*Rivea ornata C*hoisy),Pracibala (*Peristrophe paniculata* (Forssk.) Brumm.), Kakamaci (*Solanum nigrum* Linn.) and Visamustika (*Strychnos nuxvomica* Linn.) are also said to be Krmighna(anthelmintics) and Vranasodhana. (Wound cleansing & purifying).

In recommendation of plants for use as toothbrush Caraka enumerated some plants e.g. toothbrush sticks made of Nimba (*Azadirachta indica* A. Juss.),Karanja (*Pongamia pinnata* (Linn.) Pierre), Karavira (*Nerium indicum* Mill.), Arka (*Calotropis procera* Dryand ex W.Ait.) etc. that are disinfectant and remover of foul smell from mouth.

In Caraka Cikitsasthan 23rd chapter (Visacikitsa) there is description of one formulation for fumigation, which would kill serpents, rats, insects and tiny insects of clothes. The plants enumerated are Jatu (Laksa i.e. secretion of Lacifer lacca), Sevya (roots of *Vetiveria zizanioides* (Linn.) Nash), Patra(leaves of *Cinnamomum tamala* Nees),

Guggulu (exudates of *Commiphora wightii* Bhandari), Bhallataka (fruits of *Semecarpus anacardium*Linn.f.), Kakubhapuspa (flowers of *Terminalia arjuna* (Roxb.) Wight &Arn.), Sarjarasa (exudates of *Shorea robusta* Gaertn. f.) and Sveta(white flower variety of *Clitoria ternatea* Linn.). In Vranacikitsa also there are formulations for local irrigation, application and fumigation to be used for vranasodhana (wound cleansing & purifying), which act as disinfectant. Natural biocides are also used in various types of Krmiroga e.g. Udarakrmi (intestinal worms), Krmija-siroroga (Headache due to hydatid cyst/Taenia solium/ Taenia Echinococcus), Krmija-hrdaroga (Heart disease with infective pathology), Vranakrmi (wound infested with worms), Krmidanta (Carious ooth/dental caries) etc.

In Astangasamgraha Uttarasthana, chapter-1(Balopacaraniya) it is described to tie a cotton pouch containing Hingu (exudates of *Ferula foetida* Regel), Vaca (rhizome of *Acorus calamus*Linn.), Turuska (*Liquidambar orientalis* Mill.) and Sarsapa (seeds of *Brassica campestris* Linn.), on the upper frame of door and head side of bed (cradle)and also in the neck of infant and mother for protection which possibly acts as repellent for insects etc. Further there is mention of fumigants for baby's apartment consisting of dried crow feathers along with Trivrta, Vaca (rhizome of *Acorus calamus* Linn.), Kustha (*Saussurea lappa* Clarke),Srivesta (exudates of *Pinus roxburghii* Sarg.), Sarsapa (seeds of *Brassica campestris* Linn.), added with little Ghrta (clarified butter).

Further in Astangasamgraha Uttarasthana, chapter-30 (Vranapratisedha) fumigation with Srivestaka (exudates of *Pinus roxburghii* Sarg.), Sarjarasa (exudates of *Shorea robusta* Gaertn. f.), Sala (*Shorea robusta* Gaertn. f.), Devadaru (*Cedrus deodara* (D.Don) G.Don), Simsapa (*Dalbergia sissoo* Roxb. ex DC.),Khadira (*Acacia catechu* (Linn. f.) Willd.), Asana (*Pterocarpus marsupium* Roxb.), Kaidaryasara (*Melia azedarach* Linn.), Yava (*Hordeum vulgare* Linn.), Madhucchistha (bee wax), Bhurjapatra (*Betula utilis* D.Don), Ksauma (*Linum usitatissimum* Linn.) and Ghrta (clarified butter)are indicated to allay exudation and pain of wounds.

In Astangasamgraha Sutrasthana chapter-38 (Sastrakarmavidhi) also there is mention of Vrana-raksoghna Dhupa consisting of Guggulu (exudates of *Commiphora wightii* Bhandari), Agaru (*Aquilaria malaccensis* Lam.), Sarjarasa (exudates of *Shorea robusta* Gaertn.f.), Vaca (rhizome of *Acorus calamus* Linn.), Gaura-sarsapa (white seeds of *Brassica campestris* Linn.), Hingu (exudates of *Ferula foetida*Regel), Lavana (salt), Nimbapatra (leaves of *Azadirachta indica* A. Juss.), and Ghrta (clarified butter) for the fumigation of wound. This also finds mention in Uttarasthana chapter-1 for the protection of newborn infant.

Astangasamgraha Uttarasthana chapter-8(Bhutapratisedha) contains many formulations, which appear consisting of natural biocides and fumigants. Likewise the external therapeutic measures to prevent or cure various infantile Grahabadha (Paediatric idiopathic syndrome)also appear usually consisting of similar nature of drugs.

It may be mentioned here that Ayurveda was intricately woven with culture and religion in the society and natural biocides and fumigants were widely used on a variety of pretext aimed at prolonging life and providing health, happiness and prosperity.

24. What are non-patentable inventions in *Ayurveda* ?

1. What is Ayurveda ?

Ayurveda is a Sanskrit word which consists of two different words; *Ayu* and *Veda*. *Ayu* means life and *Veda* means knowledge.Thus it indicates 'The knowledge of Life'. Ayurveda is not only the science of diseases, but it also deals with Life. The definition of Life is - The flow of consciousness. Life is known as 'The union of the mind, body and spirit'. The science of life is that which makes life understood. It imparts the knowledge with regard to what substances, properties and actions are promotive of life and what are not so. *Ayurveda* as described by the eminent scholar *Caraka*, is that which deals with good, bad, happy and unhappy life, its promoters and non-promoters, measure and nature. The subject matter of *Ayurveda* is not the physical body alone. It also deals with the mental, emotional and spiritual aspects. Here in *Ayurveda*, it is laid down the good and the bad of life, and what is wholesome and what is unwholesome in relation to life as also the measure of life.Thus the subject matter of Ayurveda is not only a physical body but the mind, body and spirit - the tripod. *Ayurveda* gives us the formulas for living a long life filled with joy. *Ayurveda* is not limited to the physical body but also deals with the mental, emotional and spiritual aspects of life.

2. How old is Ayurveda ?

Ayurveda is a part of *Vedas*. *Veda* means pure state of knowledge. As a preventive science and medical system, it was described thousands of years ago in the *Rig-*

Veda (one of the four *Vedas*). *Vedas* date back an estimated 5,000 years so *Ayurveda* is widely considered to be the oldest form of health care in the world. *Ayurveda* has influenced many other medical sciences. For this reason, *Ayurveda* is often referred to as the 'Mother of all healing.'

3. What are the eight branches of Ayurveda ?

1. Internal medicine (*Kaya Chikitsa*)
2. Pediatrics and gynaecology (*Balaroga Chikitsa*)
3. Surgery (*Shalya Chikitsa*)
4. E.N.T - ear, nose, throat and surgery of head and neck and opthalmology (*Shalakya Chikitsa*)
5. Toxicology (*Agadatantra*)
6. Rejuvanetion (*Rasayana*)
7. Study of sexual function and reproduction (*Vajikarana chikitsa*)
8. Psychiatry (*Manasroga chikitsa*)

4. What is the principle objective of Ayurveda ?

Ayurveda is bestowed upon us by our ancestors, who were eminent and wiser and having insight into our being. Basically Ayurveda is Health promotive - preventive - curative and nutritive - all self contained.
The two principle objectives of *Ayurveda* are :
(a.) '*Swasthasya swasthya rakshanam*' - To prolong life and promote perfect health (add years to life and life to years)
(b.) '*Aturasya vikar prashamanamcha*' - To completely eradicate the disease and dysfunction of the body.

Ayurveda takes the individual as whole and seeks to re-establish harmony between all the constituents of the body. Perfect balance of the tripod - Mind, Body and Spirit means perfect health.

5. What is the definition of health according to *Ayurveda* ?

Ayurveda has a Holistic concept of Health. Disease free status of the body alone does not mean health. Swasthya (Health) means to be 'established in the self'.
The Ayurvedic view of a healthy person is :
Samadosha, Samagnischa, Samadhatumalkriyah, Prasannatmendriyamanah, Swastha iti abhidhiyate. (Sushrut Samhita, Sutrasthan, Chapter 15, Shloka 10)
'He whose doshas are in balance, appetite is good, all tissues of the body and all natural urges are functioning properly, and whose mind, body and spirit (self) are cheerful or full of bliss, is a healthy person.'

6. What is the ayurvedic viewpoint of structure and function of body ?

Universe as well as human body are made up of five basic elements colectively called *'Panch Mahabhootas'*.These are *Aakash* (Ether), *Vayu* (Air), *Agni*(Fire), *Aapa* (Water) and *Prithvi* (Earth). The sixth mandatory component of life is Atma (life spirit) without which life ceases.The human body is made up of *Doshas* (Bio-humours),*Dhatus*(Body matrix) and *Malas* (excretable products). *Vata, Pitta* and *kapha*, known as *Tridoshs* are physiological entities of the body which are responsible for carrying out all the functions of the body. *Dhatus* are the structural entities of the body.These are *Rasa* (Plasma), *Rakta* (Blood cells), *Mamsa* (Muscular tissue), *Meda* (Fatty tissue), *Asthi* (Bony tissue), *Majja* (Bone marrow) and *Shukra* (Hormonal and other secretions of genitals). *Agni* (Metabolic fire) is in thirteen different forms and carries out the whole metabolism of the body.The waste products of the body which are excretable are produced in the body as by-products of metabolism.These are known as malas which include *Pureesh* (faeces), *Sweda* (sweat) and *Mutra* (urine).All biotransformations within the body occur through *Srotases* (body channels) which are the sites for action of *Agni*.

7. How does *Ayurveda* approach to diagnose and to treat the diseases ?

Ayurvedic approach to diagnose the illness is very systematic and scientific. The logical thoroughness and minuteness of methods employed in Inquiry and Investigation of each and every factor or phenomenon of the patient concerning his habit,constitution, illness and environment are the prime factors for the perfect diagnosis. *Tridosha (Vata,Pitta and Kapha)* are the three Bio-Energies,which govern the body. The concept of these three Bio-Energies is unique. Balance of *Tridosha* means perfect health, and this is the basic principle of *Ayurveda*. The theory of *Tridosha* - the three bio-energies, is very similar to concepts of immunology and stress.The Ayurvedic approach to Life-style (swasth-vritta) teaches us the practical rules of behavior that prevent *Tridosha* being disturbed because every disturbance in the normal balance of *Tridosha*, results in an illness. In *Ayurveda*, primary attention is given to re-establish or balance the *Tridosha*. 'Balance of *Tridosha* is Life and imbalance means illness'.

8. What is *'Tridosha'* ?

Vata, Pitta and *Kapha* are the names of *Tridoshas*. *Vata*(air), *Pitta*(bile) and *Kapha*(phlegm). *Doshas* are basically three different forms of energy. The three *doshas* contain two of the five elements as any other matter. The *Doshas* work as a team in a natural healthy individual. Perfect balance of these three *Doshas*(energies) is the basis of well being. These constituents give specific properties to *Doshas* with each *Dosha* having one property particular to itself and two opposite to others. Hence

the character of *Doshas* is influenced mainly by what is eaten as also by temperature, season, mental state etc. In most persons either one or combination of *Doshas* would be dominant. This defines the constitution of the person.

9. How *Tridosha* work ?

Ayurveda describes each individual as a state of balance of the three *doshas*, which govern different aspects of the body. *Vata dosha* controls the principle of transportation, *Pitta dosha* controls internal processes such as digestion and metabolism, *Kapha dosha* encompasses our bodily protection, strength and growth. Because no two people have the same combination of these three *doshas*, everyone is a unique individual and individualized care and attention is needed for the treatment. When an imbalance occurs, proper diet and lifestyle changes can be implemented restore the balance. In such a case, one may be advised for specific dosha-reducing / aggravating foods, activities and medications or may even opt for *Pancha Karma*, an internal cleansing system of treatment mentioned in *Ayurveda*.

10. What is the effect of *Vata Dosha* ?

If *'Doshas'* are dynamic energies, *'Vata Dosha'* is the kinetic energy. Word *'Vata'* means 'which moves'. *Vata dosha* is initiator of all forms of activity. It is important in the communication network of the body ; from sense organ to brain and consciousness, from tissue to tissue and cell to cell.*'Vata'*is responsible for perception (that includes pain), assimilation and reaction. It brings a thought from memory to consciousness and transfers current experience into memories. It inspires speech and is the base of laughter and exaltation. At the level of physical body it is responsible for micro and macro movement. '*Vata'* is more cerebral. Stress vitiates *'vata'* which in turn alters 'Pitta' or *'Kapha'* leading to wide variety of symptoms. Lack of sleep, excessive physical activity and long hours of fasting also vitiate *'Vata'*. There are five types of *Vata Dosha*.

11. What is the effect of *'Pitta Dosha'* ?

'Pitta dosha' is responsible for all types of transformations in the body. *Pitta* controls digestion of food as well as conversion of light rays falling on the retina to electric impulses. In the brain there is a local *'Pitta Dosha'*, responsible for comprehension and analysis of data received. A person with pre determined *'pitta dosha'* is highly intelligent, quick to process sensory inputs and able to reach decisions promptly. *Pitta* controls emotions like anger, fear and bravado. *Pitta* controls digestion of food, it is responsible for hunger, appetite and thirst. It gives shine to the skin. In contrast to *Vata*, *Pitta* is more physical. There are five types of *'Pitta Dosha'*.

12. What are the effects of *Kapha Dosha* ?

'Kapha Dosha', is also termed as phlegm. It is the cohesive energy in the body, it smoothes out problems, lubricates and provides support when needed. If *'Vata'* is kinetic energy, *'Kapha'* is potential energy. *'Kapha'* is very close to tissues and like *'Pitta'*, it has greater physical form than *'vata'*. It shares many of the properties of the tissue it influences. It is anti thesis of *'Pitta'* and is protective in nature. Its main property is stability. In contrast to *'Pitta', 'Kapha'* denotes loyalty, compassion and love. A predominance of this *'Dosha'* makes a person forgiving in nature free from envy and endowed with patience. It gives mental strength and resistance to diseases. It gives firmness to joints while keeping them lubricated. It also enhances sexual potency. There are five types of *'Kapha Dosha'*.

13. What is the approach of Life-style according to *Ayurveda* ?

Health is greatly influenced by Life-Style *(Swastha-vritta)*. According to *Ayurveda*, Life-style (the rules and guidelines) is divided into three parts:
-- *Dincharya* (Diet and regimen for the daytime)
-- *Ratricharya* (Diet and regimen for the night)
-- *Ritucharya* (Seasonal Diet and regimen) - *Sandhikal* (diet instructions for the joint period of two seasons)
One more thing that is very helpful for the knowledge of proper life-style *'Samsarjan karm'* means specific diet program after illness or after *Panchkarma* Treatments. For perfect health, long disease free body status, one must follow these instructions.

14. What are the modes of ayurvedic treatment ?

There exists eight divisions of Ayurvedic therapeutics, namely *Kayachikitsa* (Internal medicine), *Shalya* (Surgery), *Shalakya* (Otorhinolaryngology and Opthalmology), *Kaumar Bhritya* (Paediatrics, Gynaecology and Obstetrics), *Agad tantra* (Toxicology), *Rasayana* (Gerentorology), *Vajikaran* (Aphrodisiacs) and *Bhoot Vidya* (Psychiatry). The principles of treatment are *Shodhan* (purificatory), *Shaman* (palliative and conservative), *Nidan parivarjan* (avoidance of causative and precipitating factors of disease) and *Pathya Vyavastha* (do's and don'ts regarding diets and lifestyle). *Shodhan* therapy includes *Vamana* (medically induced emesis), *Virechana* (medically induced laxation), *Vasti* (medicated enema), *Shirovirechana* (administration of medicines through nose) and *Raktmokshan* (Blood letting). These therapeutic procedures are collectively known as *Panchkarma*. Before executing *Panch karma* treatment, *Snehan* (oleation) and *Swedan* (getting perspiration) are to be employed .

15. What is the importance of Ayurvedic procedures ?

These are basically therapeutic measures taken either to prevent diseases or cure them. Thus Ayurvedic procedures are done either to detoxify the body or as a prelude to strengthening the immune system. *'Panchakarma'* or five procedures is the most sought after anti aging, detoxification therapy.

16. What is *Panchakarma* ?

The pre-procedures are called *'Poorva Karma'* and consists of digestion *(Pachana)*, oleation (*Snehan*), fomentation *(Swedan)*. Basic objective of *'Panchakrama'* (Five internal detoxification procedures) is to remove the excessive accumulated toxins, which causes the vitiation of *'Dosha'* (fault). If any *'dosha'* is imbalanced, either due to environment or dietary factors it is often difficult to be normalised with diet and drugs alone. Actual *'Panchakarma'* procedures are always preceded and succeeded with specialised procedures. If used as therapeutic measure they can be done at any time of the year, i.e., at the time the disease occurs. If one uses it as a preventive measure, it should be used at the appropriate time for each *'Dosha'*. *'Poorva Karma'* include *'Pachan''Snehan''Swedan'*

17. What are the five procedures in *Panchakarma* therapy ?

1. Induced vomiting *(Vaman)*
2. Purging *(Virechan)*
3. Medicinal enema *(Vasti)*
4. Nasal administration of substances *(Nasya)*
5. Blood letting *(Raktamokshana)*.

18. What is *Vaman* ?

Vaman : Vomiting (Vaman) is intended to remove the *Kapha dosha*. It is not to be adopted for *'Kapha'* only but necessarily in case of *'kapha's'* conjunction with one or both. *Vaman* is essential in the case of food poisoning or other type of poisoning. *Vaman* employs certain emetic drugs that induce a severe spell of vomiting to clean the upper gut. Bronchial asthma is prevented by periodically inducing *'Vaman'*.

19. What is *Virechan* ?

Virechan : Purging is a purification treatment as important as emesis or vomiting. *'Virechan'* concentrates on the lower part of the gut and uses purgatives to clean the bowel. This procedure helps in getting rid of all three *Doshas,* though *Pitta* and *Kapha* benefit the most. To cure piles, boils, discolouration of face, jaundice, chronic fever, spleen enlargement, cataract, intenstinal disorders, ailments of the womb, arthritis, constipation, diabetes, skin diseases, tumours, asthma, cough, ailments of the head and many other diseases .

20. What is *Vasti* ?

Vasti : The classical Text *'Ashtanga Hridaya'* says, 'A purge properly carried out leads to clarity of intellect, power to the organs, elemental stability and glow to digestive fire and it delays aging'. Medical enema '*Vasti*' predominates in the five course of treatment *(Panchakarma)*. This is prescribed for *'Vata'* dominated patients and helps to overcome all diseases, revives vital force and rejuvenates body. The rectal lining is very permeable and the drug reaches the circulation directly without passing through liver. *Ayurveda* offers '*Vasti*' as a therapy for several indications. These are digestive, evacuating, rejuvenating and health promotive '*Vastis*'. In general *Vastis* tackle *Vata dosha* the best way. The fluid for *Vasti* is either medicinal decoction or herbal oil to suit the ailment. *'Vasti'* for the head gives extra ordinary relief for all ailments connected with *'Vata'* in the head, ear ache, humming in the ear, deafness, numbness of the head and all ailments based on the cranial nerves. This procedure is usually done for 7 days.

21. What is *Nasya* ?

'Nasya' (Nasal administration of substances) is essential for more or less all the ailments above the neck. This is effective for many diseases like facial paralysis. *'Nasya'* is of three types : purgative, nourishing and palliative. For each ailment, a substance that gives desirable result is selected. By this procedure shoulders, neck and face will become dense and firm, the skin soft. All organs become firm and hair will not gray.

22. What is *Raktomokshana* ?

Raktomokshana : Blood letting (*Raktamokshana*) is a therapy advised by *Ayurveda* to treat heart conditions and varicose veins. *Ayurveda* advocates the use of leeches applied every alternate day to reduce congestion. The digestive fire is low after the *'panchakarma'*.

23. How is *Ayurveda* different from modern medicine ?

Modern medicine tries to treat and remove the condition, rather than treating the patient suffering from it. This is stemmed from the view that all the people are more or less the same as opposed to the Ayurvedic principles. *Ayurveda* makes its special contribution by addressing the uniqueness of each patient and by helping body to heal itself.

24. What are non-patentable inventions in *Ayurveda* ?

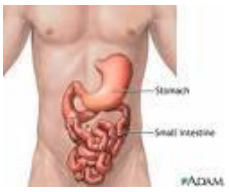

For non patentable inventions refer to the site :

Specialised Treatment :- Filariasis, Bronchial Asthama.

Glossary

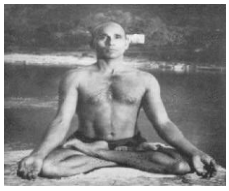

1.	ĄcĒra RasĒyana	*KĒyacikitsĒ*	Rules of conduct and behaviour in the society. Regarded as a type of RasĒyana therapy in Ąyurveda, the term refers to non-pharmacological approach in the form of improved code of conduct, to achieve rejuvenative effects of RasĒyana like longevity, immunity of the body and improved memory of mind without the use of material RasĒyana.
2.	ĄdĒnakĒla	*KĒyacikitsĒ*	One of the two divisons of the year in Ąyurveda, which has been mentioned in the seasonal regimen (§tucaryĒ). ĄdĒna literally means to take away. It represents the northern solstice i.e. the period from winter to summer solstice. It is the period during which energy/ strength is lost from the body due to increasing heat of sun which imparts hot and dry qualities to living beings. It includes three seasons namely: đišira (cold & dewy season), Vasanta (spring season), GrĪūma (summer season).
3.	Ągantuja	*Roga NidĒna*	It signifies the diseases which have an external cause. It refers to the disorders where the painful condition is first produced and is later followed by the disturbance in DoūaDhĒtu equilibrium.

			Disorders due to injury, poisoning, parasites and germs are categorised under it.
4.	ĄhĒra 	*KĒyacikitsĒ*	The term refers to food in Ąyurveda.Whatever food is eaten or drunk, which not only provides nutrition but satisfies mind and soul, has been mentioned as ĄhĒra. Regarded as one of the three sub-pillars of healthy living (Upastambha), ĄhĒra has been given prime importance in Ąyurveda. Ąyurveda believes we are what we eat and all the diseases are also the outcome of faulty food habits.' ĄhĒra has been furthur classified into two types: wholesome diet (Hita ĄhĒra) and unwholesome diet (Ahita ĄhĒra).
5.	ĄkĒša 	*PadĒrtha VijŪĒna*	Free Open Space. ĄkĒša is regarded as the fifth and most subtle of the five eternal elements or the PaŪcamahĒbhĶta. It is the universal organising principle of space and is thus represented through spaces in human body viz. mouth, nose, respiratory tract etc. Since space is the medium for transmission of sound waves, ĄkĒša is characterised by dominant feature of sound (đabda) and ears are regarded as the sense organs which predominantly have akasa mahabhuta.

6.	Ąlocaka Pitta	*đĒrĪrakriyĒ*	One of the five subtypes of Pitta. It is located in the eyes and governs the vision, thus enabling one to perceive the forms of objects clearly and meaningfully.
7.	ĄmĒšaya 	*RacanĒđ ĒrĪra*	Literally the term means the site or receptacle of undigested food (Ąma). The term is used to refer to organs of digestion between navel (NĒbhi) and the breast (Stana). Anatomically, it can be regarded as stomach with upper part of small intestine (duodenum).
8.	Ąma	*Roga NidĒna*	Literally the term means unripe, uncooked or immature. In Ąyurveda, it is a generic term used to indicate toxic metabolic residue which is the result of undigested food due to impaired (weak or irregular) Agni. Ąma is regarded as the root cause of gastro-intestinal as well as systemic disorders.
9.	Ąmaya	*Roga NidĒna*	Literally the term means □arising due to Ąma'. It is used as a synonym of disease in general as Ąma is the most common cause of all the disorders. See also VyĒdhi, Gada.□
10.	ĄpaŠ 	*PadĒrtha VijŪĒna*	The element water. One of the five eternal elements (PaŪcamahĒbhĶta), ĄpaŠ is the universal organising principle of fluidity that characterizes change and movement of all kinds. It is the element without stability,

			which has dominant characterstic feature of taste (Rasa). Since the element attributes to taste, tongue is regarded as the sense organ which predominantly contains this element. The element is represented through body fluids e.g. blood & lymph.
11.	Ąpta	*PadĒrtha VijŪĒna*	Literally means reached' or obtained'. In Ąyurveda, the term refers to a credible authority or person free from prejudice and emotional influence, the one who tells us about the objects exactly as they are. Such persons are regarded as trustworthy and their words are considered a source of valid knowledge.
12.	Ąptopadeša	*PadĒrtha VijŪĒna*	The term refers to instructions, utterances or communications of the credible persons (Ąpta). Regarded as one of the sources of valid knowledge (PramĒīa) in Ąyurveda, the classical texts also represent a form of Ąptopadeša. It is the first among the methods to be employed to ascertain the nature and source of a disease.
13.	Ąrogya	*KĒyacikitsĒ*	Literally the term stands for a state of diseaselessness'. Although used as a synonym of healthful state, health is not merely absence of disease. Ąrogya can be described as condition prior to onset of disease & after the cure of disease.The condition provides

			practical framework in diagnosis, prognosis, medication and nursing. See SvĒstha also.
14.	Ąrtava	*đĒrĪrakriyĒ*	SažskḶta term for menstrual blood. Regarded as an UpadhĒtu of Rakta, the term has been further subclassified into AntaŠpuūpa (ova or egg for fertilisation) and the BahiŠpuūpa (monthly blood discharge).
15.	Ąšaya	*đĒrĪrakriyĒ*	Seat, receptacle or dwelling place. It refers to cavities or visceras in the body where the Doūa (humors), DhĒtu (body constituents) and Mala (waste products) are contained. These are seven in males and eight in females. Each Ąšaya is the dwelling place of particular body component and represents a paticular organ as suggested by name e.g.VĒtĒšaya (large intestine), PittĒšaya (liver & upper part of small intestine), RaktĒšaya (heart), ĄmĒšaya (stomach), AgnĒšaya (pancreas), PakvĒšaya (ceacum) & GarbhĒšaya (uterus) in females.
16.	Ąšcyotana	*đĒlĒkya/ KĒyacikitsĒ*	One of the eye therapies mentioned in Ąyurveda, it refers to administration of eye drops. Mostly juices of herbs (Svarasa) are used for. Nature & dose of drugs used depends upon Doūa vitiation.

17.	Ąsana 	*Svasthav Ļtta*	Literally means 'a seat' , the term is specifically used to refer to posture or steady physical position of the body for prolonged meditation.Third and most well known limb of classical Aū°ĒŽga Yoga, Ąsana refers to physical posture of Yoga. It is regarded as a way in which one can experience unity of mind and body, in harmony with the nature. Each Ąsana has a unique therapeutic value and opens a specific energy channel. Ąyurveda regards Ąsana as fixed physical forms, having specific therapeutic as well as preventive aspects that increase or decrease Doūa by themselves.
18.	Ąsava-Ariū°a	*Bhaiūajya KalpanĒ*	Medicated liquors containing self generated alcohol. The formulations are prepared by placing the drugs (juices or decoction) mixed with sweetening agents (honey/jaggery) and fermenting agents like flower of Woodfordia fruticosa (Linn.) Kurz. in specific proportions in earthen jars for a specific period of time & thus subjecting the drugs to fermentation.While Ąsavas are prepared through fermentation of raw drugs or the juices, the Ariū°as are prepared through fermentation of decoction of the drugs. These fermented formulations contain permissible amounts of alcohol and have a

			prolonged shelf life. They improve digestive fire and are easily absorbed.
19.	ĄsthĒpana Basti	*KĒyacikitsĒ*	Medicated decoction based cleansing enemas or intrarectals. Regarded as a part of PaŪacaKarma therapy in Ąyurveda, it involves administration of decoctions of the drugs through anal orifice.The therapeutic procedure has more of cleansing value, hence needs not to be retained for longer time in the body than fortyeight minutes. Used for abdominal as well as nervine disorders of VĒta. Also known as Niruha Basti. See Basti also.
20.	ĄyuŠ	*PadĒrtha VijŪĒna*	Literally meaning duration or span of life, the term specifically refers to life. According to Ąyurveda, ĄyuŠ is a complex four dimensional balanced union of the body (đĒrĪra), body's senses (Indriya), mind (Satva) and the spirit (ĄtmĒ) in a harmonised and co-ordinated manner. Thus the term includes not only physical, but the mental aspects as well.
21.	Ąyurveda 	*SažhitĒ*	SažskĻta term composed of two words - ĄyuŠ (Life) & Veda (knowledge). Literally it means 'science of life'. It is a holistic, natural and most ancient system of healthcare that originated in India about five thousand years ago. Regarded as an Upaveda of Atharva Veda, it is the only

			system of medicine that deals with preventive as well as curative aspects. Its aim is to provide guidance regarding food and lifestyle so that healthy people can stay healthy and prescription of medicines for the diseased to improve their health. It has a vivid descripton of beneficial (Hita), non-beneficial (Ahita), happy (Sukha) & unhappy (Dukha) aspects of life.
22.	AbhyaŽga 	*KĒyacikitsĒ*	A type of external oleation that involves smooth, synchronised, gentle but firm massage or rubbing of body parts with simple or medicated oils in the direction of hair growth. The process involves specific hand movements for specific body parts. Included as a detail in personal hygiene (SvasthavĻtta), daily or periodical massage not only has regional benefits but helps to increase circulation, decrease dryness and balance the vitiated Doūa. See also Udvartana.
23.	Agada	*KĒyacikitsĒ*	In general, the term Gada' means disease, thus A-gada' means freedom from disease. Agada indicates drugs or medicine. Specifically the term is used for the Anti-dotes' or the drugs which counteract the effect of poisons.

24.	Agada Tažtra	*Aū°ĒŽga-Ąyurveda*	The term refers to food in Ąyurveda.Whatever food is eaten or drunk, which not only provides nutrition but satisfies mind and soul, has been mentioned as ĄhĒra. Regarded as one of the three sub-pillars of healthy living (Upastambha), ĄhĒra has been given prime importance in Ąyurveda. Ąyurveda believes we are what we eat and all the diseases are also the outcome of faulty food habits.' ĄhĒra has been furthur classified into two types: wholesome diet (Hita ĄhĒra) and unwholesome diet (Ahita ĄhĒra).
25.	Agni	*KĒyacikitsĒ*	Literally the term stands for fire. It is the essential form of fire and heat in the body. It kindles all the biological processes of life. Responsible for generation of body heat, temperature, vision and digestion, it forms the basis of digestive system. Its function is transformation, absorption and elimination and is imperative to digestion and metabolism. Agni is of thirteen types: one Ja°harĒgni, five BhĶtĒgnis & seven DhĒtvĒgnis.
26.	Agnikarma	*đalya*	Therapeutic thermal cauterisation. Specifically, AgniKarma refers to burning, scalding or scarring of organic tisssue by means of a hot iron rod (DagdhašalĒkĒ) or similar appliances. Regarded as the best parasurgical procedure in ancient

			Ąyurvedika surgery, it is used as a final resort to treatment of disorders which are incurable with herbal medicine or surgery. Diseases treated with AgniKarma disappear & do not recur.
27.	Agni MahĒbhĶta	*PadĒrtha VijŪĒna*	Literally represents fire. One of the five eternal elements i.e; the PaŪcamahĒbhĶta, Agni is the universal force in nature that produces heat and radiates light.The element is the organizing principle which controls all kinds of conversions or transformations, and is characterised by dominant feature of Vision (RĶpa). Eyes are regarded as the sense organs.
28.	AjĪrīa	*KĒyacikitsĒ*	Regarded as a gastro-intestinal disorder, the term refers to the state of Indigestion. A sequel of weak digestive fire (Ja°harĒgni), it is a source of many other abdominal disorders.
29.	Akūitarpaīa 	*đĒlĒkya/ KĒya CikitsĒ*	Literally means nourishment (Tarpaīa) to the eyes (Netra). This is a special treatment in which the eyes are bathed in pure or medicated fluids (clarified butter/oil/decoction). For this purpose after massage, organic dough rings made of blackgram are carefully placed around the orbital cavity. Medicated GhĻta (clarified butter) is kept in hot water and its supernatant when tepid, is poured into the dough ring and retained for 15-20

			minutes. Eyes are alternatively opened and closed while immersed in the GhḶta. The oil bath for the eyes relieves tension and fatigue, improves eyesight, balances the nervous system, and smoothes away wrinkles while gently eliminating toxins and impurities. It has also been known to relieve eye strain from constant glaring into the computer or television screen, simple myopia as well as more serious eye diseases.
30.	Amla	*PadĒrtha VijŪĒna*	One of the six tastes (—aē Rasas). In Ąyurveda, it refers to the sour taste. It has been described as healing and stimulant, VĒta pacifying, cardiotonic or good for heart (HḶdaya), appetizer and digestive but causing heartburn if taken in excess. See also Rasa.
31.	Amlapitta	*KĒyacikitsĒ*	A gastro-intestinal disorder in which vitiated Pitta turns acrid and causes inflammation of gastric mucosa. Characterised by loss of appetite, heartburn, eructations and giddiness, the disease can be regarded as hyperacidity or dyspepsia.
32.	Ažgula	*RacanĒ đĒrĪra*	See Ažguli
33.	Ažguli	*RacanĒ đĒrĪra*	A type of measurement used in ancient times. It denotes measurement of a finger's width.

34.	AŪjana	*KĒyacikitsĒ*	One of the therapies for eye mentioned in Ąyurveda, it refers to application of black pigments in the form of powder or ointment into the eyes.
35.	AntaŠ ParimĒrjana	*KĒyacikitsĒ*	The term refers to internal therapeutics in Ąyurveda. It consists of two broad categories - Saẑšodhana (purificatory therapy) & Saẑšodhana (palliative therapy). Purificatory therapies includes the PaŪcaKarma while palliative therapy involves treatment through drugs, diet and lifestyle regimens according to the nature of disease. See BĒhya ParimĒrjana also.
36.	Anu	*PadĒrtha VijŪĒna*	A common prefix of SaẑskĻta used frequently in Ąyurveda which means after, near to or subordinate to.
37.	Anulomana	*Dravyaguīa*	Literally the term stands for sending or putting to right direction. One of the pharmacological actions of the Ąyurvedika drugs. It signifies the herbs which facilitate elimination of waste products (Mala) through the natural outlets. Such drugs possess the capacity to relieve flatulence and mild constipation as well. It includes aromatic and carminative herbs like HarĪtaki (Terminalia chebula Retz.).
38.	AnumĒna	*PadĒrtha VijŪĒna*	One of the PramĒīa (source of valid knowledge) mentioned in Ąyurveda, AnumĒna refers to

			inferential or deduced knowledge dependent on rational or balanced thinking (Yukti) e.g; deduction of the state of digestive fire (Ja°harĒgni) from individual's capacity to digest food.
39.	AnupĒna	*KĒyacikitsĒ*	A fluid vehicle prescribed to be taken with or soon after the medicine. The purpose is to facilitate the absorption or assimilation of the drug or to increase efficacy of the drug. Different AnupĒnas according to the disease & nature of the main drug have been mentioned in the ancient texts. Main vehicles are honey, clarified butter, buttermilk and juices of certain herbs. Can also be regarded as post-prandial drink.
40.	Anupašaya	*Roga NidĒna*	Fourth phase of Ąyurvedika diagnostic process (PaŪcanidĒna). It refers to diet, drugs or regimens which aggravate the condition of the patient and is contrary to Upašaya. Employed to determine the hidden sign & symptoms, Anupašaya is used for diffrential diagnosis and to ascertain the precise nature and magnitude of a disease. For example, in case of rheumatoid arthritis (ĄmavĒta), application of oils (Snehana) is Anupašaya & aggravates the condition, but it relieves Arthritis (SaždhivĒta) and is regarded as

			Upašaya for that. See Upašaya also.
41.	Anurasa	*Dravyaguīa*	Secondary taste. It refers to the taste which manifests slightly or manifests at the end, after the main Rasa. For example sour taste of amalki(Indian gooseberry) is its Rasa', but the sweet taste perceived at the end is the Anurasa'. The secondary taste or the Anurasa may be present in the fresh state of substance but disappears in dry state. See Rasa also.
42.	AnuvĒsana Basti	*KĒyacikitsĒ*	One of the Bastis (Intra-rectal therapies) mentioned in Ąyurveda. AnuvĒsana refers to unctous (oily) medicated enemas/intrarectals that must be retained in the body for a minimum of nine hours to produce desired therapeutic effects. It nourishes and moistens the dry tissues and organs and is useful in VĒta disorders.
43.	ApĒna	*đĒrĪrakriyĒ*	One of the five subtypes of VĒta, the term literally means downward moving air. Since it is centered in large intestine, which is the main site of VĒta, it supports and controls all the other subtypes. It governs the downward moving impulses of defaecation, urination and ovulation etc.

44.	ApĒna VĒyu	*đĒrĪrakriyĒ*	Flatus. Regarded as one of the non-suppressible urges, the term is specifically used for the waste bodily wind which is expelled through lower portion of body i.e. anus.
45.	Aparigraha	*Maulika SiddhĒnta*	The fifth Yama. Parigraha means to take, procure, to possess or to seize and A' is prefix for non in SažskĻta. Aprigraha, therefore, means non hoarding. It refers to avoidance of unnecessary acquisition of objects not essential for mantaining spiritual study.
46.	Apatarpaīa	*KĒyacikitsĒ*	One of the two commonly used Ąyurvedika treatments, the term is used for reducing or detoxifying therapy. It is designed for reducing the body bulk. Involves a series of dietary as well as other regimens that produce lightness e.g; fasting, exercises, exposure to sunlight & administration of drugs. It includes three of the six elementary therapies (Upakrama), namely Lažghana (lightening), Rukūaīa (drying) and Svedava (sudation). All these have one effect in common, i.e. to produce lightness. See Sažtarpaīa also.
47.	Apathya	*PadĒrtha VijŪĒna*	One of the PramĒīa (source of valid knowledge) mentioned in Ąyurveda, AnumĒna refers to inferential or deduced knowledge dependent on rational or balanced thinking (Yukti) e.g;

			deduction of the state of digestive fire (Ja°harĒgni) from individual's capacity to digest food.
48.	Apatya	*KaumĒra BhĻtya*	Offspring, child or descendant.
49.	Ariū°a	*PadĒrtha VijŪĒna*	The term signifies unfavourable symptoms that predict death. Ariū°a specific to different diseases have been mentioned. Regarded as clinic discipline in Ąyurveda (Ariū°a VijŪĒna), its knowledge helps the physician to ascertain the possibility of cure of a disease. See Ąsava Ariū°a also.
50.	Arka 	*Dravyaguīa*	SažskĻta name for the medicinal plant Calotropis procera Dryand
51.	Arka	*Bhaiūajya KalpanĒ*	A pharmaceutical preparation of volatile drugs. The term refers to distilled or concerntrated aromatic waters used both in Ąyurveda & UnĒnĪ medicine. It is prepared by distillation of drugs which have been soaked in water for at least twenty four hours. Such preparations can be preserved for longer periods of time than infusions.
52.	Artha	*PadĒrtha VijŪĒna*	Literally the term refers to the meaning of a word or phrase, i.e; final essence of any thought. Specifically, it stands for goal, purpose or the object of pursuit,

			which is desired, desirable and satisfies the acquiring tendency of an individual. Also represents material prosperity as one of the four vital accomplishments of human life.
53.	Aū°ĒŽga Ąyurveda	*PadĒrtha VijŪĒna*	The eight branches/disciplines of Ąyurveda are collectively named as Aū°ĒŽga Ąyurveda. These are: KĒyacikitsĒ (internal medicine), KaumĒra BhĻtya (paediatrics), BhĶta VidyĒ (psychiatry), đĒlĒkya (otorhinolaryngology and ophthalmology), đalya (surgery), Agada Tažtra (toxicology), RasĒyana (Geriatrics) & VĒjĪkaraīa (eugenics and aphrodisiacs).
54.	Aū°ĒŽga HĻdaya	*SažhitĒ*	One of the three major treatises of Indian medicine, a classical text of seventh century by VĒgabatta. It is regarded as a concise version of Aū°ĒŽga SaŽgraha, which is predominently based on Caraka and Sušruta SažhitĒ. The text represents scientific advancements over the ancient treatises and provides a complete description of Ąyurveda in itself.
55.	Aū°avarga	*Dravyaguīa*	A group of eight rare medicinal herb roots which are alterative and nutritive in nature. They promote health and are beneficial in general debility due to chronic wasting disorders.These include: JĪvaka,

			§ūabhaka, MedĒ, MahĒmedĒ, §ddhi, VḶddhi, KĒkolĪ & KūĪrakĒkolĪ. Most of the drugs of the group are not available now a day. Substitutes (PratinidhĪ Dravya) are used in place of such drugs. Given with warm milk and GhḶta as an adjuvant, group is an ingredient of popularly used Avleha, CyavanaprĒša.
56.	Aū°avidha ParĪkūĒ	*Roga NidĒna*	One of the types of RogĪ ParĪkūĒ, the term literally means eight fold methods of examination. These includes the examination of NĒåĪ (pulse), Mala (stool), MḲtra (urine), JihvĒ (tongue), đabda (voice), Sparša (skin), DḶk (vision) and ĄkḶti (appearance). It gives an idea about the patient's general condition and the type of illness. Also hepful to analyze the prognosis of disorder.
57.	Asthi 	*RacanĒ đĒrĪra*	Bone tissue. One of the seven bodily components (DhĒtus), it is said to be derived from fat (MedĒ) & generative of bone marrow (MajjĒ). Being the hardest structure, it provides support, shape and protection to human body, apart from nourishing the bone marrow.
58.	Auūadhi 	*KĒyacikitsĒ*	SažskḶta term for drugs with therapeutic value. Specifically, the term is used for therapeutic modalities, remedies and the treatment. It signifies all the healing methods including rituals and the invocations which are

			conducive to health. One of the three pillars of Ąyurveda (TrisĶtra), AuūadhĪ deals with the managment of the disorders. See Bheūaja also.
59.	AvagĒhana 	*KĒyacikitsĒ*	A type of wet fomentation (Drava Sveda), which involves soaking the affected part in a container filled with warm medicated fluids. Comparable to tub bath, it promotes the circulation, calms the nerves, strengthens the muscles and relieves the pain and stiffness. It is specifically used for VĒta disorders, haemorrhoids, dysuria and other painful conditions. See Drava Sveda also.
60.	Avalambaka Kapha	*KriyĒ đĒrĪra*	One of the five subtypes of Kapha, Avalambaka is located in the heart and lung region and performs the vital functions of nourishing, lubricating and protecting both the structures.
61.	Avaleha 	*Bhaiūajya KalpanĒ*	Medicinal preparation meant to be licked or lapped up by the tongue. It has consistency of thick paste and is prepared by boiling and reducing the strained decoction to desired consistency and adding sugar or jaggery to it. Easily assimilable, CyavanaprĒša is the most popularly used Avaleha.
1.	BĒhya ParimĒrjana	*KĒyacikitsĒ*	External cleansing therapies. Treatment procedures through external purificatory measures. It

			includes several therapeutic procedures i.e. methods of external oleation e.g. AbhyaŽga, sudation (Svedana) and medicated gargles (GaīēĶūa).
2.	Bala	*đĒrĪrakriyĒ*	SažskĻta term for strength. In Ąyurveda, the term signifies not only the physical strength, but includes the vibrant immunity, which is capable of acting without being acknowledged. It has been further classified into three types - natural (Sahaja Bala), seasonal (KĒlaja Bala) and aquired (YuktikĻta Bala).
3.	Balya	*Dravyaguīa*	Means the one that promotes strength. The term signifies pharmacological property of a drug. It is used for the energizers that provide strength to the body. Apart from increasing muscular strength and tone i.e; the physical capacity, they increase the immunity i.e; ability to resist diseases.
4.	Baždha 	*đalya Tažtra*	Literally meaning bandage. In Ąyurveda, the term specifically refers to the knots or the bandages, which are regarded as a very important aspects of surgery (đalyatažtra). Fifteen different types of bandages pertaining to different body parts and different areas have been mentioned.

5.	Basti	*RacanĒ đĒrĪra*	Sažskḷta term for urinary bladder. According to Ąyurveda, it is a vital part (Marma).
6.	Basti	*KĒyacikitsĒ*	Literally meaning the urinary bladder, Basti refers to therapeutic administration of medications through rectal, vaginal or uretheral routes. It has been named so as in ancient times, bladder of large animals like goat and cow were used as enema bags for its administration. Most important component of PaŪacaKarma therapy, it is the best curative & palliative procedure for VĒta disorders. Regarded as half or sometimes the whole of the therapy, the procedure has rejuvenative (health promoting) value as well.
7.	BhĒnupĒka	*Bhaiūajya KalpanĒ*	BhĒnu stands for sun, PĒka refers to processing. The term, therefore, refers to processing of drugs in the sunlight. It is basically the process of evaporating the moisture/water content of the drugs by exposure to sun. Specifically mentioned for preparation of Loha Bhasma.
8.	BhĒvanĒ 	*Bhaiūajya KalpanĒ*	Addition of fluids (decoction/juices) to the powdered drugs (plant or mineral origin) followed by trituration of the drugs till the fluid dries up.Commonest procedure during preparation of the formulations, it potentiates the action of original

			drugs. Generally, the process is repeated several times, so that the drug aquires active principles of the incorporated fluids.
9.	Bhaiūajya KalpanĒ	*Aū°ĒŽga Ąyurveda*	Ąyurvedika pharmaceutics. The term Bhaishajya' means medicine and KalpanĒ' means form. It is that branch of Ąyurveda which deals with pharmaceutical preparation of different forms of medicine e.g. syrup, tablet, powder etc.
10.	Bhasma 	*RasašĒstra*	Literally the term stands for holy ash. In Ąyurveda, the term signifies alkaline ashes derived from organic (plant and animal) as well as inorganic (mineral & metallic) substances. Commonly, the term refers to calcined or incinerated form of mineral and metallic substances, prepared through elaborate processess of đodhana and MĒraīa. Water soluble Bhasmas of plants are are called as Kūara. Bhasmas are used widely as these are available at all the times, can be preserved for longer periods and are effective in small doses. They are intended for internal use.
11.	Bheda	*Roga NidĒna*	Literally means type, divison, variety or distinction, the term describes the types of a disease in Ąyurveda. It is also regarded as developmental stage of an untreated disorder; and refers to sixth stage of disease

			manifestation, characterised by complications and aggravation into chronicity.
12.	Bhedana	*Dravyaguīa*	Literally, the term means breaking through or piercing. One of the pharmacological actions of the Ąyurvedika drugs, the term is used to denote purgatives like Picrorhiza kurroa, which cause forcible expulsion of feaces by breaking down the hardened stool.
13.	Bhedana	*đalya Taztra*	One of the eight surgical procedures (đastra Karma) in Ąyurveda. It signifies the incision which is used to achieve effective drainage or exposure of underlying structures to let the contents out. Used for treatment of suppurative disorders which require drainage e.g. an abscess (Vidradhi).
14.	Bodhaka Kapha	*đĒrĪrakriyĒ*	Literally means the awakener' or the one who catalyzes knowledge. It is one of thesub-types of Kapha that is located in the tongue and enables perception of taste.
15.	BĻhažīa	*KĒyacikitsĒ*	Nourishing therapies in Ąyurveda. One of the six preparatory treatments (Upakrama) which promote bulk and nourishment of the body. It consists of administration of certain drugs or food articles which are Balya (strength promoting) in nature alongwith prescription of

			regimens like sleep, bath, gentle massage and administration of certain medicated oil enemas (AnuvĒsana Basti). Predominently used for VĒta disorders. Can be regarded as a palliative therapy.
16.	BḶhattrayĪ	*SažhitĒ*	The three most ancient scriptures of Ąyurveda i.e. Caraka SažhitĒ, Sušruta SažhitĒ and Aū°ĒŽga HḶdaya are collectively referred to as BḶhattrayĪ or the three supreme or paramount texts. These form the most important database of Ąyurvedika medicine at present. The treatises represent systemization of medical science of Ąyurveda upto seventh centuary A.D. Each of the texts describes not only the theoretical & philosphical basis of Ąyurveda, but also the diagnosis, therapy as well as preparation of numerous curative formulations.
17.	BhrĒjaka Pitta	*đĒrĪrakriyĒ*	One of the subtypes of Pitta that is located in the skin and governs lusture, complexion & body's temperature by keeping secreations from sweat and sebaceous glands of the skin active.
18.	Bhrama	*Roga NidĒna*	SažskḶta term meaning an illusion, deceit or wrong perception. Regarded as a mental disorder in Ąyurveda, it refers to false knowledge or

			mistake e.g. regarding a rope as snake.
19.	BhĶtĒgni	*đĒrĪrakriyĒ*	Elemental fire. The form of Agni at molecular level. It is of five types corresponding to each of PaŪcamahĒbhĶta, responsible for transformation of respective element in the dietary articles, thus helping in molecular metabolism. Can be regarded as digestive enzymes.
20.	BhĶta VidyĒ	*Aū°ĒŽga Ąyurveda*	One of the eight branches of Ąyurveda which classically deals with pacification of demons and ghosts through Yogika and divine therapies like Mažtra CikitsĒ, PrĒīĒyama and đĒntiKarma etc. Since the symptoms are psychological and the treatments are also rational, it can be regarded as Ąyurvedika psychiatry in modern era.
21.	Brahmacarya	*SvasthavĻtta*	One of the three leading pillars of healthy living (Upastambha) and fourth part of Yama in Aū°ĒŽga yoga, it not only includes sexual restraint or abstinence but intelligent handling of sexual energy. It is the first Ąšrama i.e.department of spiritual life.
22.	Brahma MĶhĶrta	*SvasthavĻtta*	Pre-dawn hours. It is the period roughly 1.5 hours or ninety minutes before sunrise. Ąyurveda regards it is auspicious to arise in this hour. Known as God's hour, it is regarded as most conducive for meditation and to aquire

			supreme knowledge and eternal hapiness.
23.	Buddhi	*PadĒrtha VijŪĒna*	Sažskḷta term derived from ''Buddha', which means - to know. Literally the term means intellect. It is the faculty of wisdom, intelligence and discrimination, refers to intellect of living beings, that by which one knows or is aware. It is the ultimate decision maker, a decisive state which determines distinction between the things.
1.	Cakra 	*SvasthavḶtta*	Sažskḷta term for wheel or a disk. In Ąyurveda, it signifies the seven basic energy centres within the body of which ones consciousness is composed. In physical body the centres correspond to nervous system or glands situated along the spinal cord from base to head. These are sacred energy gateways which govern subtle psychosomatic aspect of inner being. Useful in Yoga and meditation, these have qualities of re-establishing the inner balance and restoring the health form.
2.	Cakūu 	*PadĒrtha VijŪĒna*	Sažskḷta synonym for eye, the sense organ of vision. Regarded as faculty of sight, light and clearness, its other synonyms are Akūi, Nayana & Netra.
3.	Cakūuūya	*Dravyaguīa*	Literally the term signifies drugs which are RasĒyana for the eyes

			(beneficial for the eyes). The term is used for the drugs which provide health and longevity to the eyes and support the health of eye.
4.	Caraka	*SažhitĒ*	The original commentator on Caraka SažhitĒ, considered to be father of Ąyurvedika medicine.
5.	Caraka SažhitĒ	*SažhitĒ*	It is the most ancient and most authoritative text of Ąyurveda available today. Originally in SažskĻta and mostly in verse form, the text predominently deals with the treatments through internal and external applications of medicine. It explains the logic and philosphy on which Ąyurvedika system of medicine is based. It remains the most authentic Ąyurvedika text on internal medicine till date.
6.	CatuūpĒda	*SažhitĒ*	Four props or parts of medical practice. The term signifies four essential ingredients of successful medical management. These include: Bhiūaka (physician), Dravya (drugs,diet and all other medical facilities needed in the treatment),UpasthĒtĒ (attendent or nursing personnel) & RogĪ (Patient). A meaningful and effective co-operation of these four aspects of therapeutics plays an important role in successful management of the disorder.

7.	CetanĒ	*PadĒrtha VijŪĒna*	Derived from the root Citta', means to perceive or understand. The term signifies the individualised consciousness or intelligence i.e. the means by which one becomes aware of oneself and the things around. Heart is regarded as principle seat of consciousness (CetanĒ SthĒna) in Ąyurveda.
8.	Chardi	*Roga NidĒna*	Regarded as a disorder in Ąyurveda, the term refers to vomiting due to vitiation of Doūa or unpleasent sensory experience. In it especially upward moving UdĒnavĒyu is vitiated.
9.	Chedana	*Dravyaguīa*	Literally the term means to cut away. One of the pharmacological actions of Ąyurvedika drugs, it refers to the herbs which actively draw out the Doūa by scraping them from the tissues. For example, Marica (fruit of black pepper)
10.	Chedana	*đalya Tažtra*	Indicates excision. One of the eight surgical procedures (đastra Karma). A procedure whereby a part or whole of the limb or body structure is cut off from the parent. It is employed for non-suppurative, hard, fixed and necrotising tissue lesions.
11.	CikitsĒ	*KĒya CikitsĒ*	Derived from the root 'Ki° RogĒpnayane', it refers to measures related to cure and relief from disease. Regarded as

			a synonym of treatment or therapies, it comprises of measures dealing with eradication of causative factors as well as treatment of the disorders. The treatment in Ąyurveda is widest and most comprehensive among all other systems of medicine. Principally, it is classified into three broad categories namely - Saẑšodhana (purificatory therapies), Saẑšamana (palliative therapies) and NidĒnaparivarjana (elimination of cause).
12.	Citta	*PadĒrtha VijŪĒna*	Subconscious mind. It is the storehouse of memory, regarded as the seat of three fold mental faculties comprising of the BuddhĪ (intellect), Mana (mind) and the AhaẑkĒra (egoism).
13.	CĶrīa 	*Bhaiūajya KalpanĒ*	Literally the term stands for powder. It signifies fine powder of a drug or fine mixture of the drugs. Commonly used form of Ąyurvedika drugs, it retains potency for one year if well preserved.
1.	DaivavyĒpĒšraya CikitsĒ (DaivĪ CikitsĒ)	*KĒya CikitsĒ*	One of the three major methods of treatment. Divine treatment is advised for disorders which were believed to be caused by sinful acts and could not be ascribed to any physical or mental cause, e.g. ApasmĒra (epilepsy) and UnmĒda (psychological disorder). The treatment involves incantations (Maẑtra), wearing of

			precious stones (Maīi/ Ratana) & sacrifices, all of which are intended to secure divine influence in order to eliminate disease.
2.	DašamĶla 	*KĒya CikitsĒ*	Literally means ten roots. Traditional combination of the root barks of ten potent herbs taken in equal amount. The drugs have more or less similar therapeutic action. The group includes roots of Aegle marmelos Correa ex Roxb., Gmelina arborea Roxb., Oroxylum indicum (Linn.) Venten, clerodendrum multiflorum (Burm.f.) Kuntze Syn.: C. phlomoides Linn. / Premna integrifolia Linn. / Premna mucronata Roxb., Stereospermum chelonoides (Linn. F.) DC. Syn.: S. suaveolens (Roxb.) DC., and roots of Desmodium gangeticum (Linn.) DC, Uraria picta (Jacq.) Desv. ex DC., Solanum indicum Linn., Solanum surattense Burm. and Tribulus terrestris. Mentioned as đothahara MahĒkaūĒya in ancient texts, the group has anti-inflammatory action and is effective in KĒsa(bronchitis),(SandhigatavĒta) arthiritis , đirasĶla(headache) , Jvra (fever) , DhĒtukūaya (weakness), Tandra (drowsiness) and digestive problems.
3.	Dašavidha ParĪkūĒ	*Roga NidĒna*	Ten-fold Ąyurvedika diagnosis of the patient. It is one of the many criterions of diagnosis that are

			mentioned in Ayurveda. It includes the physician's judgement regarding the patient as a whole, his constitution (PrakĻti), DoūikaVititation (VikĻti), quality of the tissues (SĒra), compactness of the body (Sažhanana), general stature and physical proportionality (PramĒīa), physical strength (VyĒyĒma đakti) , adaptability (SĒtmya), emotional balance (Sattva), digestive capacity (ĄhĒra đakti), rate of ageing (Vaya).
4.	DhamanĪ	*RacanĒ đĒrĪra*	Literally the term stands for the blowing pipes. According to Ąyurveda, it refers to the vascular structures involved in transportation of nourishing substances to all parts of the body by action of VyĒna VĒyu. The movement of fluids through these hollow tubes results in the blowing sound and thus the name. They originate from the region of the umblicus and are twenty four in number.
5.	DhanvantarĪ	*SažhitĒ*	Physician of the Gods. Regarded as founder of Ąyurveda, he is re-incarnation of the Hindu God Vishnu, who emerged at the time of churning of ocean by Deva and Asura or demons, with a pot containing ambrosia (rejuvenating nectar/elixir of immortality).
6.	DhĒtu	*đĒrĪrakriyĒ*	Literally the term means □that which supports, holds and binds

			togeather.' In Ąyurvedika physiology, the term refers to bodily constituents (tissues) which form the pillars of the body.These are the means of nourishment and growth and responsible for anatomical architecture of the body. They provide support to body as well as mind. Seven in number, these include: Rasa (plasma/lymph), Rakta (blood), MĒžsa (flesh), MedĒ (fat/adipose tissue), Asthi (bones), MajjĒ (bone marrow) and đukra(semen/sperm) . Each DhĒtu is substrate for formation of next DhĒtu i.e. precursor of next DhĒtu.
7.	DhĒtu	*RasašĒstra*	Literally the term means □that which supports, holds and binds together.' It refers to the metals used as drugs in Ąyurvedika pharmaceuticals.
8.	DhĒtvĒgni	*đĒrĪrakriyĒ*	Special digestive agencies for bodily tissue. It is the specific constituent fire of each DhĒtu which is responsible for its metabolism and transformation into other DhĒtu. The entire array of tissue metabolism is dependent on it which inturn is dependent on Ja°harĒgni.
9.	DhĪ	*Roga NidĒna*	SažskĻta term for acquisition of knowledge. One of the aspects of mind power, it refers to the capacity to learn or aquire knowledge. It indicates the inner reasoning, initial learning or

			understading and therefore signifies immediate or working memory. Loss of DhĪ alongwith the two other aspects of mind power, i.e. DhĻti and SmĻti is regarded as an important cause of diseases in Ąyurveda. See DhĻti, SmĻti and PrajŪĒparĒdha also.
10.	DhĻti	*Roga NidĒna*	SažskĻta term for the retention capacity or the power to retain what has been learned. It is the processing of the new knowledge within the mind and brain that results in memory that can be retrieved later. It is the capacity of mind to store knowledge for future reference.
11.	DhĶmapĒna	*KĒya CikitsĒ/ đĒlĒkya Tažtra*	Inhalation of medicated smoke. The therapy is predominently used as treatment procedure especially in the đĒlĒkya Tažtra. Selected drugs are powdered, made into suppository, smeared with GhĻta/oil, put in a dry cylinder and then ignited. The process involves inhalation of fumes through nostrils and exhalation through mouth. It has been mentioned as post therapeutic procedure for Vamana and Nasya.
12.	DhĶpana	*KĒya CikitsĒ*	SažskĻta term for fumigation. The therapy involves burning a combination of drugs of plant, animal or mineral origin at a place to release medicated fumes. The therapy is aimed at

			refreshing and sterlising the air for curative and prophylactic purposes. Also used for treatment of wounds and ulcers.
13.	DĪpana	*Dravyaguīa*	One of the pharmacological actions of the Ąyurvedika drugs. It signifies drugs or natural substances that enkindle the digestive fire and thus augment the appetite. The drugs indirectly help in digestion of food. For example,ginger, pepper etc.
14.	DinacaryĒ	*SvasthavĻtta*	SažskĻta term for daily routine. It refers to the wholesome daily routine (day to day conduct) mentioned in ancient Ąyurvedika texts, that needs to be followed for the sustenance of a healthful living, which is one of the objective of Ąyurveda. It signifies the activities of the individual from morning to night.
15.	Doūa	*đĒrĪrakriyĒ*	Literally the term signifies □the corrupting agent', or □vitiating factor'. In context of Ąyurveda, these are the bioenergetic forces of the body which govern the entire biological process of the living organism, i.e. regulate all the physical and psychological behaviour. These are the bodily humors which are found in unique proporton in every individual determining the unique constitution (PrakĻti). In state of natural balance, these function as pillars of positive health. However, these have inherent

			tendency to get vitiated primarily and further vitiate the bodily tissues to result in manifestation of the disease. These are regarded as of two types: đĒrĪrika (Physical) & MĒnasika (Mental). đĒrĪrika, commonly known as Tridoūa, include VĒta, Pitta & Kapha while MĒnasika include Raja & Tama.
16.	Drava	*Dravyaguīa*	Literally means fluid, the term indicates one of the twenty properties of matter identified in Ąyurvedika pharmacology, which combats the dryness of the body.
17.	Drava Sveda 	*KĒya CikitsĒ*	Sudation through medicated liquids. It is used in patients with VĒta-Pitta predominance. The process is carried out either by keeping the affected part in a container filled with warm medicated liquids (AvagĒhana) or pouring the warm medicated liquids over the affected area (Pariūeka).
18.	Dravya	*KĒya CikitsĒ*	Literally meaning substance', the term is specifically used for the drugs; i.e. substances employed as medicine in Ąyurveda, as according to Ąyurveda, there is no substance in the world which can not be employed as medicine. It has been mentioned as one of the four pods of treatment (CatuūpĒda) in ancient texts.

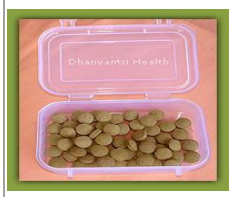

19.	Dravya	*PadĒrtha VijŪĒna*	Literally meaning □substance'; the term is regarded as the substances which are foundations of quality (Guīa) and action (Karma). According to Ąyurvedika philosophy, the entire universe is primarily made of nine eternal substances, i.e. KĒraīa Dravya which include PaŪcamahĒbhĶta, ĄtmĒ (Soul), Mana (Mind), KĒla (Time) and DišĒ (Space).
20.	Dravyaguīa	*Aū°ĒŽga Ąyurveda*	Ąyurvedika pharmacology and pharmacogonosy. The branch of Ąyurveda dealing with identification, description, classification, properties and actions of the drugs, specially the plant drugs. Scattered all through Aū°ĒŽga Ąyurveda, the science basically deals with the drugs (Dravya), their therapeutic properties and pharmacological actions.
21.	DĶūya	*đĒrĪrakriyĒ*	Literally the term means ''the corrupted factors' or the one that contaminates. It signifies the DhĒtu and Mala which are secondarily vitiated by the Doūa. Hence it indicates the deranged or disturbed tissues which are regarded as seat of disease manifestation in the body. Vitiated Doūa are also termed as DĶūya
22.	Dvandvaja / Dvidoūaja	*đĒrĪrakriyĒ*	A condition characterized by simultaneous predominance of two Doūa, it can be the unique

			somatic constitution of the person (PrakḶti) or a type of disorder.
1.	EūaīĒ	*PadĒrtha VijŪĒna*	Literally the term means ?to seek' . In Ąyurveda, it refers to pursuits of healthy living. Three pursuits of healthy living include: longevity (Paraloka EūaīĒ), to earn wealth as a mean of fulfillment of passion or desire (DhanaiūaīĒ) and to have a pleasent existence beyond (ParalokeūaīĒ).
1.	Gada	*Roga NidĒna*	Disease or sickness. Literally the term refers to the condition which makes one disabled.
2.	Gandhaka 	*RasašĒstra*	SažskḶta term for Sulphur. Commonest used mineral component of Ąyurvedika formulations. Regarded as subsidiary mineral in Ąyurvedika pharmaceutics, it is used for potentiating the effect and minimising the toxicity of Mercury (PĒrada) in Ąyurvedika formulations.
3.	GaīēḴūa 	*đĒlĒkya/KĒya CikitsĒ*	Ąyurvedika mouthwash. Described as a step in DinacaryĒ, it involves holding fluids (Mukha dhĒraīa) like oil, honey, milk and decoction etc in the oral cavity for a specific period of time (3-8 min) without movement of the fluids inside the oral cavity. Apart from strengthening teeth and gums, it improves voice and senstivity of the taste buds also. See Kažvala also.

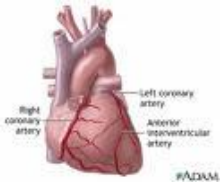

4.	Garbha	*Maulika SiddhĒnta*	Literally, the term means womb, interior chamber, the inside or middle of anything.
5.	Garbha 	*Prasuti Taztra*	Signifies foetus or embryo. Soul (ĄtmĒ) alongwith JĪva (mind) descends into the zygote formed by fusion of sperm and ovum resulting in formation of embryo. The same is confined to uterus (mother's womb) and undergoes developmental changes for nine months to develop into full term foetus.
6.	GarbhĒšaya 	*StrĪroga*	The eigth Ąšaya in females which is the receptcle of foetus. Anatomically it is regarded as the uterus.
7.	GhĻta/ GhĪ 	*KĒya CikitsĒ*	SažskĻta term for clarified butter, known as GhĪ in Hindi. Butter is gently heated till water evaporates and protein settles down at the bottom. Later it is strained to result in formation of GhĻta. It has been compared to nectar of life i.e. AmĻta in Ąyurveda as it has several medicinal uses both in the original and processed forms. It has also been mentioned as a pharmaceutical preparation wherein the medicated fluids (KvĒtha) and pastes (Kalka) are added to pure GhĪ and boiled till the water or the liquid evaporates and froth disappears.

8.	GrahaīĪ	*Roga NidĒna*	Apart from anatomical structure, the term has been regarded as a disorder in Ąyurveda; it signifies disturbances in digestion and assimilation in small intestine. Disorders like irritable bowel syndrome, sprue etc fall in the category of GrahaīĪ.
9.	GrahaīĪ	*RacanĒ đĒrĪra*	Literally meaning receptacle or the one which receives. It signifies a part of Gastrointestinal system (Koū°ha) which anatomically comprises lower end of the stomach and upper part of the small intestine. The part receives and retains food during the process of digestion. It is regarded as seat of PĒcaka Pitta and Ja°harĒgni.
10.	GrĒhĪ	*Dravyaguīa*	Literally means to bind. The term refers to pharmacodynamic property of the drugs in Ąyurveda. It signifies the herbal medicines or drugs which facilitate absorption of intestinal fluids. The drugs act as appetizers as well as astringents and are used in intesinal disturbances e.g. irritable bowel syndrome, non-infective diarrhoea etc. The drugs are Uūīa in potency and pungent in taste. For example, đuī°hĪ (Zingiber Officinale).
11.	Gražthi	*đalya Tažtra*	Literally meaning knot or complex. In Ąyurveda, the term refers to tumour, lump or nodule visible or palpable from the surface. It has been regarded as a

			specific disorder in Ąyurveda and several types have been mentioned.
12.	GrĪūma	*SvasthavĻtta*	Term refers to summer season. One of the three seasons of ĄdĒna KĒla. It signifies the end of ĄdĒna KĒla and ranges from Mid-May to Mid-July. As per Ąyurveda, the season is characterised by diminition of Kapha and vitiation of VĒta. See ĄdĒna KĒla, §tucaryĒ also.
13.	Guēa 	*Bhaiūajya KalpanĒ*	Term used to indicate jaggery, indian raw natural sugar. It is the solidified form of sugarcane juice used as a content of many Ąyurvedika formulations. It is rejuvenative tonic, helps in elimination of urine and feaces. Contains vitamins and minerals also.
14.	Guīa	*PadĒrtha VijŪĒna*	SažskĻta term for quality or trait. It refers to the qualities that are inherent in a substance and cannot exist on their own. A total of forty one Guīas have been described in Ąyurveda and out of these twenty are regarded as physico-pharmacodynamical properties of drugs and diet e.g. heavy, cold, soft. There are three fundamental qualities of subtle substances or primal nature which have been mentioned as Triguīa in Ąyurveda and these include: Sattva (Quiescent, self luminous stuff), Raja (Inherent energy/Active stuff) and Tama

			(Heavy/ obstructing/ passive stuff).
15.	GurḶ	*Dravyaguīa / Maulika SiddhĒnta*	Literally the term means dispeller (Gu) of darkness (RḶ). Regarded as a spiritual teacher, it is the title for living representative of philosphical or religious system. In Ąyurvedika pharmacology, it is the term for heaviness, one of the many physico-pharmacodynamic properties of a drug, constituted by Earth and Water. Its main action is providing satisfaction (TḶpti) and increasing bulk of substances (BḶhažīa). For example, the drug, MĒūa (Phaseolus mungo).
16.	Gu°ikĒ 	*Bhaiūajya KalpanĒ*	A ball or pustule. Ąyurvedika medicinal preparations in the form of pill. These are solid, semisolid globular masses which are designed to be swallowed. These represent somewhat more stabilized form of CḶrīa. They are prepared by solidifying the decoction of drugs with or without mixing the powder of the drugs.The other method involves BhĒvana of some specific liquids to the powdered drugs (CḶrīa), which is dried thereafter and made into semisolid bolus. The advantage is they are portable, easily administered and contain the exact dosage of the drugs. Synonyms include Vati, VĒtaka, Modaka etc.

1.	Hemanta	*SvasthavḶtta*	Winter season. Ranges from mid-november to mid january. One of the three seasons of the Viūarga KĒla (Strengthening period).
2.	HikkĒ	*Roga NidĒna*	SažskḶta term for hiccup. It has been named so because of the Hik' sound produced. Regarded as a symptom in modern system of medicine, it has been mentioned as a specific disorder in Ąyurveda, caused due to aggravation and upward movement of VĒta. Dietary irregularities and psychic factors like anxiety, nervouseness and anger have also been mentioned as causes for production of hiccups.
3.	Hima	*Bhaiūajya KalpanĒ*	One of the five fundamental pharmaceutical preparations, i.e. PaŪcavidha KaūĒya KalpanĒ. The term signifies cold infusions prepared by soaking one part of well crushed drug in six parts of water and keeping it overnight (twelve hours). Thereafter, the filterate is taken as Hima.
4.	HḶdaya	*RacanĒ đĒrĪra*	SažskḶta term for Heart. HḶ' means 'to take' and 'Dya' means for to give'. The term therefore signifies the physiological aspect of heart, which is the central organ and the main site of exchange of body fluids, i.e. pure and impure blood. It is the chief site of consciousness (CetanĒ) and mind (Mana). In Ąyurveda it is also regarded as the seat of

			PrĒīa/life force and also the repository of eight essential drops of Ojas in the body.
5.	HĻdya 	*Dravyaguīa*	One of the pharmaco-dynamic properties of the Ąyurvedika drugs. The term refers to cardiac tonics, i.e. the drugs, properties or tastes which nurture the heart, blood and circulation. The drugs promote cheerfulness by strengthening the cardiovascular system. Sour taste (Amla Rasa) has been regarded as the best Cardiac strengthener in Ąyurveda. Other examples of HĻdya herbs include Arjuna (Terminalia arjuna) and pomengranante.
1.	Indriya	*RacanĒ đĒrĪra*	Literally the term means belonging to Indra'. In Ayurveda the term refers to the eleven instruments of perception and action. Five are the organs of perception (JŪĒnendriya) and five are organs of action (Karmendriya). Eleventh is the mind (ManaŠ) which is the dual organ of perception as well as action (Ubhayendriya). These are regarded as components of ĄyuŠ in Ąyurveda.
1.	JĒŽgama	*Dravyaguīa*	Derived from the verbal root Gam' which means to go or move, the term refers to living entities which are self moving, more specifically referred as wanderers.

2.	JĒŽgama Dravya	*Dravyaguīa*	Drugs or products which are derived from animals. These are widely used in Ąyurvedika formulations, e.g. milk, urine, dung, blood, hairs and nails of various animals.The periods or time for collection of these products has also been mentioned. Blood, hair and nails etc should be collected from young and strong animals while the products like milk, urine and dung should be collected after digestion of food.
3.	Jala	*Maulika SiddhĒnta*	See ĄpaŠ.
4.	JalĶkĒ 	*đalya CikitsĒ*	The term literally means ⍰whose life is water' or ⍰whose home is water'. It refers to aquatic blood-sucking worms, i.e. Leeches which are used to extract bad or vitiated blood and thus cure disorders caused by vitiated blood and Pitta, e.g. swellings, tumours, burning sensation, itching etc. It is the mildest form of blood letting (Raktamokūaīa), employed when SirĒvedha is not indicated. JalĶkĒvacĒraīa has been mentioned as individual therapy in Ąyurveda.
5.	JarĒ	*Roga NidĒna*	Derived from the verbal root ⍰JĻš' which means to grow old or to shorten age. The term specifically refers to old age in Ąyurveda. It has been regarded as a natural disorder (SvabhĒvaja VikĒra) in Ąyurveda treated with

			rejuvenative therapies, i.e. RasĒyana, also mentioned as JarĒ-CikitsĒ in ancient therapeutics.
6.	Ja°harĒgni	*KĒya CikitsĒ*	One of the thirteen types of Agni in the body, the central and the most important of all. It signifies the 'stomachic fire ' which performs digestion, absorption and assimilation of the ingested food and maintains health. It is believed to be located in the navel region (NĒbhi) between stomach (ĄmĒšaya) and duodenum (PakvĒšaya). Its vitiation is regarded as root cause of all the disorders in the body (KĒya) in Ąyurveda and is also known as bodily fire (KĒyĒgni) or the digestive fire (PĒcakAgni). See Agni also.
7.	Ja°hara	*RacanĒ đĒrĪra*	Literally means hard, old or bound, the term signifies the abdominal region, the Stomach (ĄmĒšaya) in particular
8.	JĪrīa	*Roga NidĒna*	The term literally means old or torn out. In Ąyurvedika pathology, the term refers to the chronicity of disorders, i.e. used as a prefix for the diseases which have been of long duration. It is also used to indicate the state of complete digestion of food.
9.	JĪva	*Maulika SiddhĒnta*	Derived from JĪva'; which means to live.The term refers to the living being in general. It has been regarded as a synonym of ĄtmĒ in

			ancient Ąyurvedika texts. It is the eternal life force which makes the bodily functions possible. It is of the nature of consciousness which makes the bodily functions possible. It is the core of the life (JĪvana)
10.	JĪvana	*Maulika SiddhĒnta*	Hindi term for life. Mentioned as ĄyuŠ in Ąyurveda. See ĄyuŠ.
11.	JĪvanĪya	*Dravyaguīa*	Literally the term means that which is beneficial for life (JĪvana). These are rejuvenative herbs. Specifically categorised as one of the MahĒkaūĒya by Caraka, it refers to a group of drugs which include the Aū°avarga along with JĪvantĪ (Leptidinia reticulata) and Madhuyaū°i (Glyccrhizia glabra).
12.	JŪĒnendriya	*đĒrĪrakriyĒ*	The term JŪĒna' signifies knowledge and Indriya' signifies organ or agent of perception. Hence the term refers to organs of perception of knowledge. There are five organs of perception, which include: sense of hearing, the ear (đrotra), sense of sight, the eyes (Cakūu), sense of touch, the skin (Tvak), sense of smell, the nose (Ghraīa), and the sense of taste, the tongue (RĒsanĒ).
13.	Jvara	*Roga NidĒna*	SažskĻta term for fever. It is regarded as most important and critical among all the disorders as it is the only disorder which affects each and every living

			being. It affects the whole body, the organs of senses as well as the mind. It has been mentioned as individual disorder as well as symptom in many other disorders. It is regarded as the king of all disorders in Ąyurveda.
1.	KĒla	*Maulika SiddhĒnta*	The term literally refers to time. It also denotes the seasons; state of an individual /disease; supreme spirit regarded as destroyer of universe and Yama-the God of death.
2.	KĒla Basti	*KĒya CikitsĒ*	Fifteen days regimen of Basti treatment consisting of ten AnuvĒsana and six ĄsthĒpana Basti in ratio of 1:6:6:3, with one AnuvĒsana initially and three the at end and AnuvĒsana alternating with ĄsthĒpana in between. It pacifies vitiated VĒta.
3.	KĒmalĒ	*Roga NidĒna*	Common term for all types of Jaundice. It is the most common of all the liver disorders. Considered a Pittaja VikĒra in Ąyurveda characterised by yellowish discoloration (HĒridra Varīa) of skin, eyes, tongue, mucous membranes and urine. As per modern system of medicine, it is the liver disorder which results in increased concerntration of bile pigments and bilirubin in blood.
4.	KĒsa	*Roga NidĒna*	The term refers to cough. Cough due to different causes has been mentioned in Ąyurveda as per the

			vitiation of Doūa and due to external injuries (Kūataja) and loss of body tissues (Kūayaja).
5.	KĒya	*Maulika SiddhĒnta*	SažskĻta term for CikitsĒ in ancient therapeutics. body', it refers to building up of body with food. The body takes in food, digests, absorbs, metabolises and assimilates in selective manner. The term comprehends the whole process of metabolism in the body. It is also used for Agni, as it is the factor responsible for bio-transformation and thus provides energy necessary for all activities in the body. Derangement of Agni is the root cause of disease in the body which requires treatment.
6.	KĒya CikitsĒ	*Aū°ĒŽga Ąyurveda*	It is the foremost branch of Aū°ĒŽga Ąyurveda. KĒya stands for body or the Agni and CikitsĒ refers to treatment. The term collectively stands for branch of Ąyurveda which deals with management of whole body disorders resulting mostly due to derangement of Agni e.g. Jvara (fever), Kuū°ha (skin disorders) etc. The branch comprises all specialities of general medicine.
7.	KĒya Kalpa	*KĒya CikitsĒ*	KĒya' means body and Kalpa' means transformation. The collective term refers to ancient rejuvenative procedures which result in radical changes in life and health ranging from cure of mild disorders to weaning off the

			age related changes, e.g. wrinkling of skin and loss of vitality etc. It is basically an anti-aging therapy. It was first used for a sage, Cyavana §ūi, who supposedly turned to thirty years from eighty years with the treatment. The treatment involves strict daily and dietary regimens which must be followed to get desired results.
8.	KajjlĪ	*RasašĒstra*	Black powder/amalgam, fine like eye-salve, prepared by repeated trituration of purified mercury (PĒrada) and purified sulphur (Gandhaka). Most primitive preparation used in Ąyurvedika practice. It is relatively safe and makes ideal base for most of the Rasa formulations. It exerts potentiating effect on properties of other drugs and makes them easily assimilable in the body tissues.
9.	KalĒ	*Maulika SiddhĒnta*	The term means tiny fraction, small part or an aspect. Generally employed for phase of moon or a small unit of time, it is specifically used for minute membranous anatomical structures which separate primary bodily constituents (DhĒtu) from their respective physical locations (Ąšaya). These are seven in number as per Ąyurvedika anatomy (RacanĒ đĒrĪra).

10.	Kalka 	*RasašĒstra*	One of the five basic formulations (PaŪcavidha KaūĒya KalpanĒ) which is prepared by soaking selected fresh or dried parts of medicinal plants and then grinding them into a wet paste. The crushed plant material is administered as such without expressing the juice. It is employed for the drugs which have active principles in both solid as well as liquid parts. It is used in preparation of medicated GhĻta and oils. It has lower potency than the expressed juice (Svarasa).
11.	Kalpa	*KĒyacikitsĒ/ Bhaiūajya KalpanĒ*	The word is derived from the SažskĻta word "KalpanĒ" which means to think or to imagine. In Ayurveda, the term refers to a drug or its preparation; or treatment regimes that have been formulated and have the power eradicate a disease and to transform or bring radical changes in health and life. In treatments administered in Kalpa form, the dosage is increased and decreased gradually in a definite pattern for a specific period of time to achieve desired results. Generally, Parpa°Ī preparations like Vijaya Parpa°Ī are administered in this way for the treatment of GrahaīĪ (irritable bowel syndrome). It is mentioned that ĄmalakĪ (Emblica officinalis), BhallĒtaka (Semecarpus anacardium) and

			PipallĪ (Piper longum) when taken in Kalpa form act as RasĒyana; i.e. immuno potentiators, anti ageing and anti oxidant agents.
12.	Kažvala	*SvasthavĻtta*	A type of Ąyurvedika mouth washes which involves movement of herbal decoction/Oil/clarified butter in the oral cavity for a specific period of time. It has cleansing as well as strengthening action for teeth and gums. See GaīēĶūa also.
13.	Kapha	*đĒrĪrakriyĒ*	Ka' stands for water and Pha' refers to the process of biological evolution, hence the term literally means life fluid'. One of the three Doūas, it is the functional intelligence within the body regarded as the principle of cohesion. đleūma is another synonym of Kapha which means to keep togeather'. It is responsible for nourishing, developing and fortyifying functions and plays a vital role in nutrition and stability. Most stable of three Doūa, it is also potential source of strength and resistance against the diseases; i.e. it bestows immunity. It has five subtypes, namely đleūaka, Tarpaka, Bodhaka, Kledaka and Avalambaka.
14.	Karma	*Maulika SiddhĒnta*	Literally the term stands for action or deed. The term has multiple meanings in Ąyurveda. It signifies actions done in the past

			as well as in the present existence.The past actions are believed to yield results in the present/ current birth (Daiva Karma). Such actions have also been mentioned as the causes of many diseases in ancient texts, e.g. Kuū°ha (leprosy), ApasmĒra (epilepsy) etc.
15.	Karma	*Dravyaguīa/KĒya CikitsĒ*	The term signifies both actions and procedures in different aspects.The therapeutic action of a specific drug on the body is known as Dravya Karma, while the therapeutic procedures to eliminate vitiated Doūa e.g. Vamana (emesis), Virecana (purgation) have also been mentioned as Karma (PaŪacaKarma).
16.	Karma Basti	*KĒya CikitsĒ*	Thirty days regimen of Basti treatment consisting of eighteen AnuvĒsana and twelve ĄsthĒpana Basti in ratio of 1:12:12:5, with one AnuvĒsana initially and five at the end and AnuvĒsana alternating with ĄsthĒpana in between. It pacifies vitiated VĒta.
17.	Karmendriya	*Maulika SiddhĒnta*	Organs/agents of action. These are five in number which include: Hasta (hands for movements), PĒda (feet for locomotion), Mukha (mouth for speech), Guda (anus for elimination) and Upastha (generative organs for procreation). See Indriya also.

18.	KaūĒya	*Maulika SiddhĒnta*	SažskĻta term for astringent taste. It is a cooling taste which reduces secreations specially the salivation. It is haemostatic and aids healing. Composed of the elements VĒyu and PĻthvĪ, it pacifies Kapha and Pitta and increases VĒta. Excessive consumption results in dryness and thirst. See Rasa also.
19.	KaūĒya	*RasašĒstra*	The term has two meanings: firstly, destruction of original shape/form of the Dravya during preparation of the medicinal formulation and the second, To remove or destroy disease. The term, therefore, specifically refers to the medicinal plants/ minerals used as drugs in Ąyurveda. See KaūĒya KalpanĒ also.
20.	KaūĒya KalpanĒ	*Bhaiūajya KalpanĒ*	KaūĒya' refers to the drugs used in Ąyurvedika pharmaceutics while KalpanĒ' is used for forms. Hence the term collectively refers to the processing of drugs into different forms to make them fit for consumption and administration. Five basic formulations have been mentioned which are regarded as primary preparations for other formulations (PaŪcavidha KaūĒya KalpanĒ) i.e. svarasa, kalka, kvatha, hima and phanta .
21.	Ka°hina	*Dravyaguīa*	Literally meaning difficult, it is one of the twenty physico-pharmacological qualities of the

			drugs mentioned in Ąyurvedika pharmaceutics. It refers to the hardness of the drug. The drugs having the quality of hardness are difficult to process during preparation of the formulations. The drugs render the body strong and resistant.
22.	Ka°i Basti 	*KĒya CikitsĒ*	The term Basti refers to Intra-rectal therapies, however Ka°i Basti' is a form of external Basti mentioned in ancient therapeutics. It is lower back bath therapy which involves localised external application of medicated oils in the region of back. A rim of black gram (Uåada DĒla) is made over the affected portion of the spine and thereafter warm medicated oil is poured in it and allowed to stand for a specific period of time. The procedure is useful in treatment of disorders like low back ache, ankylosing spondylitis, slip disc and sciatica. It benefits the muscle spasm and rigidity of lower spine and strengthens the bone tissues in that area.
23.	Ka°u	*Maulika SiddhĒnta*	SažskĻta term for pungent taste. It is the heating taste found in hot spices which stimulates appetite and is useful for assimilation of food. The taste has decongesting and vivifying properties.Composed of the elements VĒyu and Agni, it increases VĒta & Pitta and decreases Kapha. Excessive

			intake of the Rasa causes burning sensation. See Rasa also.
24.	KaumĒra BhĻtya 	*Aū°ĒŽga Ąyurveda*	LIterally the term means nurturing the KumĒra (child) .It is one of the eight specialised branches of Ąyurveda. The subject comprises a lot more than its literal meaning. It is the branch which deals with nurturing of Kumara i.e.development from neonatal to the stage when child can eat solid food; Value of good milk and breast feeding and the associated problems;the diseases of infancy & childhood & respective curative measures.It involves pre-natal & post-natal care of the baby as well as care of thewoman before and during pregnancy.The branch therefore encompasses specialities of Gynaecology & Obstetrics togeather with Pediatrics.
25.	Kešya	*Dravyaguīa*	Beneficial for hair. It refers to the natural herbs and substances that strengthen hair and hair roots. For example Madhuyaū°I (Glycyrrhiza glabra Linn.), ĄmalakĪ (Phyllanthus emblica Linn.) and BhĻŽgarĒja (Eclipta prostrata (Linn.).
26.	Khara	*Dravyaguīa*	One of the twenty physico-pharmacological qualities of the drugs mentioned in Ąyurvedika pharmaceutics. It refers to roughness or coarseness of the

			drug. Such drugs are useful as scraping agents (Lekhana).
27.	Ki°°a	*đĒrĪrakriyĒ*	The term refers to the waste products of digestion and metabolism. Specifically it is used for the waste products of the body's tissues (DhĒtu) other than the three Mala, i.e. faeces, urine etc. For example, bile is the waste product (Ki°°a) of Rakta. Other examples of Ki°°a include hair, nails, waste products of nose, eyes and ears.
28.	Kledaka Kapha	*đĒrĪrakriyĒ*	One of the five subtypes of Kapha, chiefly located in stomach where it aids digestion of food along with SamĒnaVĒyu and PĒcaka Pitta. It performs the vital function of softening and liquefication of the ingested food and thus helps in digestion. It also nourishes the four other subtypes by its humid properties. Its vitiation results in irregular secreation of stomach fluids and is manifested as indigestion, loss of appetite etc.
29.	Koū°ha	*đĒrĪrakriyĒ*	The term signifies the gastrointestinal tract. Specifically refers to status of bowel of the patient. Examination of the Koū°ha is essential so as to determine the potency of the drug to be administered, specifically for Virecana. Depending upon the predominant Doūa, three types have been mentioned. MĻdu

			Koū°ha (soft bowels) arises due to predominance of Pitta and intake of hot milk, GhĻta or sugarcane produces purgation. Madhyama Koū°ha (medium bowels) represents the predominance of Kapha, where mild laxatives like TriphalĒ and Isabgol produce purgation while KrĶra Koū°ha (hard bowels) represents dominance of VĒta wherein strong laxatives are required to produce purgation.
30.	Koū°hĒgni	*đĒrĪrakriyĒ*	See Ja°harĒgni.
31.	KĻmi	*Roga NidĒna*	SažskĻta term for Worms. It includes all parasitic, bacterial, fungal and yeast infestations. It includes external (BĒhya) as well as internal (ĄbhyĒntara) parasites. Twenty in number, these have been further categorised into Kaphaja, PurĪūaja and Raktaja. Raktaja KĻmi is comparable to bacterias.
32.	KriyĒkĒla	*Roga NidĒna*	KriyĒ means action and KĒla means time. Hence literally the term means period for timely action/oppurtunity. The concept signifies the modes and stages of development of disease. Ąyurveda categorises development of disease into six stages. The course of each disease begins with accumulation of vitiated Doūa at its respective site and thereafter it proceeds to various stages to

			assume specific clinical signs and symptoms. The six stages are time units for activity of Doūa. Each stage is an oppurtuinity to halt and revert the spread of the disease. The first three stages namely SaŪcaya, Prakopa and Prasara are the sub-clinical stages while the latter three which include SthĒnasažžraya, Vyakti and Bheda are the clinical stages of pathogenesis. The knowledge of KriyĒkĒla is indispensible to a physician for early diagnosis, prognosis and timely preventive and curative measures.
33.	KūĒra	*Dravyaguīa*	Literally the term means that which destroys. It is the SažskĻta term for the alkali substances. It is light, warm, acrid and moistening. Principally used for cauterisation, it forms a separate therapeutics in Ąyurveda. KūĒra of both plant and mineral origin have been used in Ąyurveda e.g. YavakūĒra (chemically pottassium carbonate prepared from ashes of barley ears) and ŊaŽkaīa (borax). It is indicated both externally and internally in ancient therapeutics.
34.	KūĒra Karma	*đalya*	The term refers to application of KūĒra (caustics and alkaline preparations) both externally (PratisĒraīĪya) as well as internally (PĒnĪya). It is regarded as a parasurgical measure in Ąyurveda. It is more effective

			than the use of surgical instruments and their substitutes, as it is not only capable of excision (Chedana), incision (Bhedana) and scraping (Lekhana), but also counteracts the vitiation of three Doūa. It comprehends multiple qualities of many drugs. KūĒra Karma is capable of destroying the dead tissue and helps in regeneration of tissues. External application is indicated in treatment of skin disorders, piles and fistula while internal administration is digestive and laxative and is used for intestinal obstruction, enlargement of liver and spleen and urinary calculus.
35.	KūĒra SĶtra 	*đalya*	A medicated thread impregnated with paste of turmeric powder (HaridrĒ CĶrīa) and latex of Euphorbia nerifolia (SnuhĪ KūĪra) which is used in an Ąyurvedika parasurgical procedure that offers effective, ambulatory and safe alternative treatment for disorders like fistula (Bhagandara) and piles (Arša). Application of this thread helps in excision as well as healing of the unhealthy tissue and the swollen veins.
36.	Kūaya	*Roga NidĒna*	Literally the term stands for loss/ reduction/ atrophy. Antagonist to VĻddhi, the term signifies the loss and reduction of the body tissues. Ancient texts of Ąyurveda mention detailed sign &

			symptoms of the VḶddhĪ and Kshya of Doūa & DhĒtu. Specifically the term also refers to tuberculosis in Ąyurveda as the disease is characterised by wasting and atrophy of the bodily tissues. See RĒjayakūmĒ also.
37.	Kūaudra 	*Dravyaguīa*	One of the eight varieties of honey (Madhu), classified on the basis of source, i.e. the honeybee from which it is obtained and the colour. It is produced by brown coloured honeybee (Apies florae). It has been specifically mentioned for use in diabetes which has also mentioned as Kūaudra Meha in ancient texts. Other types of Madhu include: MĒkūika, BhrĒmara, Pautika, Chatraka, Ąrghya, AudĒlaka, DĒla.
38.	KūĪra 	*Dravyaguīa*	SažskḶta term for Milk. Milk of eight animals have been specifically mentioned for use in Ąyurvedika formulations and are collectively termed as Ashta KūĪra. These include- cow, buffalo, goat, sheep, elephant, horse, camel and woman.. Milk is used as the chief ingredient in many therapeutic procedures as suggested by the name, e.g. KūĪra Basti, KūĪra DhĒrĒ etc. This term is also used for latex of medicinal herbs
39.	KūĪra PĒka	*Bhaiūajya KalpanĒ*	Pharmaceutical preparation which is medicated milk prepared by boiling one part of a

			prescribed drug with eight parts of milk and thirty two parts of water till only milk remains and water is evaporated. Such preparation helps to combat the unwanted effects of the drug e.g. Arjuna (Terminalia arjuna (Roxb.) Bedd.), freely used in cardiac disorders is dry but Arjuna KūĪrapĒka is not as dry as the drug.
40.	Kūudra	*Roga NidĒna*	Literally the term stands for small. A group of disorders has been mentioned in ancient texts which have ill defined pathology and insufficient description of signs and symptoms. Such disorders have been collectively referred as Kūudra Roga. For example, AružūikĒ (dandruff), Cippa (nail bed abscess).
41.	Kuū°ha	*Roga NidĒna*	Literally the term means which damages the tissues. It is a common term for skin disorders specially leprosy as the disease causes disfiguration, discolouration and brings disgrace to the bearer. It destroys the tissues and results in even loss of the body parts.
42.	Ku°ĪprĒvešika	*KĒya CikitsĒ*	Indoor rejuvenative procedure. A type of RasĒyana therapy, i.e. rejuvenative measure which involves the admission of the patient into a specially designed cottage. Particular RasĒyana drugs have been mentioned

			which are to be administered through this method only.
43.	KvĒtha	*Bhaiūajya KalpanĒ*	The term refers to decoction, one of the five basic formulations (PaŪcavidha KaūĒya KalpanĒ), where one part of the selected drug or drugs is boiled over moderate fire (MadhyamĒgni) in an open vessel with four, eight or sixteen parts of water (as specified) untill one quarter of the water remains. Thereafter the decoction is strained through a piece of cloth. Before being added to water, the drugs are coarsely powdered and soaked in water overnight. The quantity of water is dependent on the physical properties of the constituent drugs, i.e. soft, medium or hard. It may be administered as such or used for preparation of secondary formulations like Avaleha, GhĻta and Taila etc.
1.	Laghu	*Dravyaguīa*	The term literally refers to lightness.One of the twenty physico-pharmacological qualities of the drugs mentioned in Ąyurvedika pharmacology, It is the property of ĄkĒša. The drugs having the property promote the digestive fire, are easy to digest, increase metabolism in the body constituents and thus keep the body energetic and active.
2.	LaghutrayĪ	*SažhitĒ*	The three short or easy ancient texts namely MĒdhava NidĒna,

			BhĒvaprakĒša SažhitĒ and đĒrŽgadhara SažhitĒ are collectively referred to as LaghutrayĪ. The texts are of primary importance in Ąyurveda and deal with important information about diagnosis of disease, drugs of plant or mineral origin and preparation of different fomulations, e.g. decoction, powder, tablets etc in concise form.
3.	Lakūaīa	*Roga NidĒna*	Literally the term stands for characterstics/ aspect / definition/ condition or mark. The term specifically refers to the indicators of the disease in Ąyurvedika pathology. As for diagnosis of the disease, the signs as well as symptoms are regarded as the indicators. The symptoms are the subjective ones which are expressed by the patient while the sign refers to the physical characterstics observed by the physician during examination of the patient. The term Lakūaīa' specifically refers to the Symptoms.
4.	LaŽghana	*KĒya CikitsĒ*	Fasting, reducing or lightening therapies. One of the six preparatory procedures (Upakrama) mentioned in Ąyurveda. It embodies techniques and procedures that reduce, eliminate, calm and purify. Such procedures reduce the body bulk. It includes four eliminative (Sažšodhana)

			procedures namely Vamana, Virecana, NirḲha Basti and Nasya; intake of light food (Laghu Bhojana); administration of digestive drugs (PĒcana); fasting (UpavĒsa); exercise (VyĒyĒma); exposure to sunlight and fresh air (MĒruta & Ątapa); control of thirst (TḶūīĒ). It is the prescribed therapeutic measure for treatment of Ąma. See BḶhažīa and Apatarpaīa also.
5.	LasikĒ	*RacanĒ đĒrĪra*	Fluid in the body which resides in between the skin (Tvak) and muscle tissues (MĒžsa). The term refers to sebaceous secretions. It has been mentioned as the site of Pitta and is the vitiated factor (DḲūya) in many disorders e.g. Prameha (urinary disorders /polyurea) and Kuū°ha.
6.	Lauha	*RasašĒstra*	A term used for metals in general or pharmaceutical preparations containing Loha Bhasma as the main ingredient, e.g. SaptamḶta Lauha.
7.	Lavaīa	*Dravyaguīa*	SažskḶta term for salty taste. It is the slightly heating and hydrophilic in nature and improves appetite, digestion, cleanses the blocked channels and aids in circulation. It adds relish to food and activates flow of saliva and gastric juices. It helps in strenthening of tissues but depletes the tissues when used in excess. Composed of elements like Jala and Agni, it

			increases Kapha and Pitta while pacifies the vitiated VĒta. If taken in excess, it causes burning sensation, high blood pressure, impotency, baldness, wrinkles and itching. See Rasa also.
8.	Lavaīa  /	*Bhaiūajya KalpanĒ*	Literally meaning salt, the term specifically refers to the salts extensively used in Ąyurvedika formulations. Both naturally ocurring and artificially prepared salts are used in pharmaceutical preparations. Lavaīas are used both as drugs and as adjuncts. Most commonly used Lavaīas have been colllectively mentioned as PaŪaca Lavaīa' which are appetisers, digestives, purifiers and softening.
9.	Leha	*Bhaiūajya KalpanĒ*	See Avaleha.
10.	Lekhana	*Dravyaguīa*	Means to scrape. it is one of the pharmacological actions of the drug.The term is used for the drugs/herbs which scrape the waste residues and clear the system of deranged constituents. The drugs having such action are bitter (Tikta) and pungent (Ka°u) in nature. For example, Guggulu (Commiphora wightti), turmeric (Curcuma longa) and VacĒ (Acorus calamus).
11.	Lekhana	*đalya*	One of the eight surgical procedures (đastra Karma) in ancient texts; the term refers to scraping or scooping. It is used

			for hard ulcerative lesions with thick rolled margins, which have a tendency to crack repeatedly and have raised granulating surface. It is carried out to promote healing in a chronic, non healing ulcer and to remove tartar from teeth etc.
12.	LekhanĪya	*Dravyaguīa*	The one which has the therapeutic action of Lekhana.One of the fifty MahĒkaūĒya by Caraka, it includes a group of herbs that scrape away the excess tissue, excess secretion or any obstruction.The drugs enkindle the digestive fire and pacify the Kapha Doūa.The drugs in this group include: Musta (Cyperus rotundus Linn. / Cyperus scariosus R. Br. / Cyperus arundinaceum Baker), Kuū°ha (Saussurea lappa Clarke), HaridrĒ (Curcuma longa), DĒru HaridrĒ (Berberis asiatica Roxb.), VacĒ (Acorus calamus Linn), AtiviūĒ (Aconitum heterophyllum Wall. ex Royle), Ka°uki (Picrorrhiza kurroa), Citraka (Plumbago zeylanica Linn), Cirabilva (Holoptelea integrifolia (Roxb.) Planch), HaimavatĪ (Paris polyphylla Sm).
13.	Lepa 	*Bhaiūajya KalpanĒ*	Medicines in the form of paste used for external application. The drugs made into a fine powder are mixed with some fluid medium indicated in each preparation and made into a soft

			paste. The media used for mixing include water, cow's urine, oil, GhĻta etc. Different types of Lepa have been mentioned in Ąyurveda for use.
14.	Loha 	*RasašĒstra*	SažskĻta term for the iron metal or metals in general. Depending upon the qualities and the therapeutic values, three types of iron have been mentioned in our ancient texts: Muīēa, TĪkūīa and KĒnta.
1.	Maharasa 	*RasašĒstra*	A group of eight superior minerals viz Abraka(Mica), Vaikranta(Tourmaline), Maksika(Copper pyrite), Vimala(Iron pyrite), Silajatu(Black Bitumen), Tuttha(Blue Vitriol), Capala(Bismuth ore) and Rasaka(Calamine) which are used extensively in Ayurveda.
2.	MĒžsa	*RacanĒ đĒrĪra*	SažskĻta term for flesh. It is the third among the seven bodily constituents (DhĒtu), derived from Rakta DhĒtu and is precursor of the MedĒ DhĒtu. Comprable to the muscular tissue in the body, it provides physical strength, covers the bones and nourishes the fat tissues. It contributes to the bulk of the body. Among the diseases caused by its vitiation, important ones are cervical adenitis, goitre, granulomas and tumours.

3.	MĒnasa Doūa	*đĒrĪrakriyĒ/ Maulika SiddhĒnta*	Psychic factors responsible for mental disorders. Of the Triguīa, only Satva Guīa (Balance of Harmony) is regarded as Guīa, while Raja (Stimulator) and Tama (Inhibitor) are the Doūa. These are the psychopathogenetic factors which affect mind and produce mental disorders.
4.	MĒraīa	*RasašĒstra*	Literally means ''killing'. It refers to the processing of metals and minerals through oxidation in Ąyurveda which renders these substances to Bhasma (ash powders) useful for medicinal purpose.The process converts these substances into microfined forms/compounds which can be easily absorbed and assimilated into the system without exhibiting any harmful side effects.The process involves grinding /triturating the purified metals and minerals with herbal juices and heating at high temperatures in furnaces for several times. It enhances the natural properties of the metals and minerals and introduces new properties into these substances.
5.	MĒtrĒ	*KĒyacikitsĒ*	General term for proper amount of drug, diet and physical activity. Specifically refers to dosage of pharmaceutical preparation sufficient to counteract the disease without causing any side effects. The dose of a drug depends upon multiple factors, e.g; season, constitution of

			patient, potency of the drug and the form in which the drug is administered e.g. powder, paste, decoction etc.
6.	MadĒtyaya	*KĒyacikitsĒ*	Literally means intoxication. It is the state or symptoms that arise due to continuous use or a high dose of substances that are intoxicating. Although the term signifies intoxication of any kind, alcohol (Madya) was the original reference. According to modern medicine, there are four stages involved in the process of addiction or drug dependence. These are acute intoxication, symptoms of withdrawal, drug dependence and finally drug abuse. The state of madĒtyaya is comparable to the third and fourth of these stages.
7.	Madhumeha	*KĒyacikitsĒ / Roga NidĒna*	Literally the term means excretion of sweet honey like urine.The term signifies Diabetes Mellitus in general as it is the disorder in which blood glucose level increases, exceeds the renal threshold and is excreted in urine. Ąyurveda regards it as a type of Prameha or the urinary disorders and is mentioned to be incurable.
8.	Madhura	*đĒrĪrakriyĒ*	One of the six RASA mentioned in Ąyurveda, the term refers to Sweet taste.It is Guru (Heavy), Snigdha (Viscous) and đĪta (Cooling). It is nourishing, toning and calming. It helps to build up

			the body tissues. Composed predominentaly of PḶthvī & Jala elements, it increases Kapha and pacifies VĒta and Pitta. If taken in excess, it causes obesity, diabetes and lethargy. See Rasa also.
9.	Madhyama	*Maulika SiddhĒnta*	Term stands for intermediate' or in between'. Used for multiple meanings in Ąyurveda, It signifies the middle part of the body (trunk) anatomically and middle age from medicinal point of view.''
10.	Madya	*Bhaiūajya KalpanĒ*	Any intoxicating material or substance. Specifically refers to fermented alcoholic preparations.
11.	MahĒbhĶta	*Maulika SiddhĒnta*	The term literally refers to gross eternal elements.These are the basic building blocks of existence. The building blocks of matter combine in an infinite variety of proportions such that each form of matter is unique. It is the smallest divisible part of matter which forms the universe.The universe has a miniature representation in human body.The five gross elements include: Earth (PḶthvī), Water (Jala), Fire (Teja), Air (VĒyu) and Space (ĄkĒša). Each of these five is related to a chief sense of perception and has a chief property. Collectively, these are termed as PaŪcamahĒbhĶta.

12.	MahĒkaūĒya	*Dravyaguīa*	KaūĒya signifies the Drugs having thearapeutic value. MahĒkaūĒya is the term coined by Caraka for classification of the drugs and it refers to a group of drugs which are used for similar purpose and have similar therapeutic action. MahĒkaūĒya are named on the basis of the therapeutic actions and uses of that particular group. About fifty groups have been mentioned in the ancient texts which have therapeutic value. For example, Balya (strength promoting), Vedana SthĒpana(pain alleviating) etc.
13.	MajjĒ	*RacanĒ đĒrĪra*	One of the seven bodily constituents (DhĒtu), it is derived from Asthi DhĒtu (Bone) and is generative of đukra (Semen). It is the oleating material which fills the cavities and pores of bones; it is located especially in the internal cavity of big bones. From its location, it is comparable with the bone marrow. Its main function is to provide strength to the body. It also nourishes the đukra (Sperm), which is the final constituent.The diseases caused by its vitiation include pain in finger joints, giddiness and loss of consciouness etc.
14.	Mala	*đĒrĪrakriyĒ*	The term is derived frm the DhĒtu MḶ which means to cleanse and purify. It refers to products of digestion and tissue metabolism which are polluting agents i.e.

			which, unless expelled, render the body impure. As a component of life's triad, these are the basic constituents of living organism and equally contribute to sustenance & proper functioning of the body, in a way similar to Doūa and DhĒtu. Their formation is mandatory for the maintainence of health and excretion is equally important as these toxify if retained. PurĪūa (Faeces), MĶtra (Urine) and Sveda (Sweat) are the main Malas in the body.
15.	Mana	*đĒrĪrakriyĒ*	Derived from the verbal root MĻ which means to think. It is the term for psychic energy, spirit or elemental force of nature which gives individuality to the person. It refers to the instinctive mind or the seat of desire. It is the entity responsible for generation of knowledge. It is the governer of all senses. It is regarded as the eleventh Indriya, also known as Ubhayendriya as it shares the characterstics of coginition as well as action. Forms a part of Tridaīēa (Tripod) on which the individual rests and functions. It has specific characterstics viz Ekatva (Solitude) and Aīutva (Subtleness). Analysis, thinking, imagination are some of the specific functions of Mana.
16.	Manda	*Dravyaguīa*	One of the twenty physico-pharmacological qualities of the drugs mentioned in Ąyurvedik

			pharmaceutics, the term literally means slow'. It is the property of PḶthvĪ & Jala MahĒbhḴta. The drugs having this property act slowly. It provokes the Kapha and pacifies the Pitta. For example GuēucĪ (Tinospora cordifolia).
17.	Maīda	*Bhaiūajya KalpanĒ*	Refers to rice water. It is regarded as a preparation where one part of rice (đĒli DhĒnya) is boiled with fourteen parts of water till rice is properly cooked. Thereafter water is filtered, i.e. taken without rice grains. It optimises the digestive fire.
18.	MaždĒgni	*KĒyacikitsĒ*	Signifies diminished digestive capacity or low digestive fire. A type of imbalance of Ja°harĒgni(digestive fire), which occurs due to vitiation of Kapha. It is a condition in which food taken even in normal quantity can not be digested or metabolised. It is caused by practice of diet & activity which vitiate Kapha, e.g; sleeping during day time, drinking too much water, improper food habits and suppression of natural urges. It is mentioned as the root cause of multiple disorders. See Agni also.
19.	Maztra	*KĒyacikitsĒ*	SažskḶta term derived from the root ''Mana' meaning mind and suffix ''Tra' meaning tool. The term literally refers to mind tool i.e. instrument of thought. It signifies sacred phrases or sounds that are endowed with

			special power for health and spiritual development.These may be chanted loudly or repeated silently to produce significant results. Mažtras quieten the mind, harmonize the inner self and stimulate latent spiritual qualities. Incantation of specific Mažtras has been mentioned to be useful for treatment of psychic disorders. It forms a part of DaivĪ CikitsĒ mentioned in ancient therapeutics.
20.	Mardana	*RasašĒstra*	The process of trituration of drugs generally the metals & minerals to a fine state of division with or without prescribed liquid
21.	Marma	*RacanĒ đĒrĪra*	The term refers to vital spots/lethal or mortal spots in the body where the vital forces are cocerntrated. These are sensitive and vulnerable. Injury to such spots results in permanent deformity to the organ or death. Anatomically, these are places where flesh (MĒžsa), veins (SirĒ) and arteries (DhamanĪ) are intimately associated. Ąyurveda emphasises one hundred and seven (107) points in the human body which are of great importance. According to the risk involved, these have been furthur classified into SadyaprĒīahara (instant killers), KĒlĒntaraprĒīahara (causing death after some interval), Višalyaghna (causing death as soon as the foreign body is

			removed), Vaikalyakara (causing permanent loss or deformity of the organ), RujĒkara (causing intense pain in the affected region). The knowledge of the mortal spots in the human body is very essential especially for the surgeon and the topic has been mentioned to comprise half the scope of the Surgery in Ayurveda.
22.	Mastu	*Bhaiūajya KalpanĒ*	Curd water. It is liquid seprated from yoghurt. It is used both externally and internally in ancient therapeutics. Ingredient of many pharmaceutical preparations, it has also been mentioned as AnupĒna.
23.	MedĒ	*RacanĒ đĒrĪra*	SažskĻta term for fat or adipose tissue. It is one of the seven bodily constituents (DhĒtu), derived from MĒžsa (flesh) and is precursor of the Asthi DhĒtu (bones). Its chief locus is the belly; it supports the body and contributes to its firmness. It nourishes the bones, cools the system through prespiration. Among the disease involving the constituent are thirst, dryness of mouth, palate and throat, burning sensation in the body, numbness of limbs and lack of energy.
24.	MĒraīa	*đĒrĪrakriyĒ*	SažskĻta term for intellect. Literally means that which bears intelligence. It is the mental power, intelligence or wisdom. See BuddhĪ also.

25.	Medhya	*Dravyaguīa*	Generalised term signifying pharmacological action of drugs on various areas of mental functions. These herbs enhance the mental & intellectual ability. Such herbs act on each individual aspect of mental ability & hence improve ability to learn, retain and recall information and also the coordination between these aspects. For example; BrĒhmĪ (Bacopa monnieri) and đaŽkhapuūpĪ (Convolvulus pluricaulis).
26.	MithyĒyoga	*Roga NidĒna*	Literally means improper proportion. Regarded as one of the cause of the disorders in Ąyurveda, it signifies improper physical, mental and vocal activity, i.e; improper application of mind, speech and physical activity by an individual. The same has also been mentioned for the seasons and the food habits. For example, climatic features of one season occuring in another is the improper proportion of KĒla while untrue, untimely, harsh speech indicates MithyĒyoga of speech (VĒcika). Such coordinations result in undesirable results causing disease.
27.	MĻdu	*Dravyaguīa*	One of the twenty physico-pharmacological qualities of the drugs mentioned in Ąyurvedika pharmaceutics, the term literally refers to softness. It is the property of ĄkĒša and Jala. The

			herbs having the property are easy to process, digest and soften the waste products. Such drugs enhance Kapha and pacify the VĒta and Pitta.
28.	MĶhĶrta	*Maulika SiddhĒnta*	Literally means ''moment of an hour'. The term signifies a period of time or a certain division of a day or night. There are at least three mĶhĶrta systems. The first defines one mĶhĶrta as 1/8th of a day or night (90 minutes in a 12-hour night), the second as 1/15th of a day or night (48 minutes), and the third as 1/16th of a day or night (45 minutes). MĶhĶrta also refers to the astrological science of determining the most auspicious periods for specific activities. See BrĒhmamĶhĶrta also.
29.	MĶla	*Maulika SiddhĒnta / Dravyaguīa*	Literally meaning ''root' or 'foundation'. The root, base or bottom or basis of an object etc. Also refers to foundational, original or causal, as in MĶla Grantha, i.e. original text. As for the part of a plant in Ąyurvedika pharmacogonosy, the term refers to the root of a plant.
30.	MĶrcchĒ	*Roga NidĒna*	SažskĻta term for fainting or unconsciousness. A disease caused by vitiation of Tama, which causes blockage of sensory pathways along with other Doūa, leading to loss of mental perception of pleasure or

			pain. Regarded as first stage of coma.
1.	NĒbhi 	*RacanĒ đĒrĪra*	SažskḶta term for navel or the umblicus. One of the ten specific life spots- the DašaprĒīĒyatana (seat of vital air), it is also the site of one of the six energy Cakras known as MaīipḲra Cakra. It is a SadyaŠ PrĒīahara Marma (instantly fatal) in nature. It corresponds to deep vital structures in the navel region.
2.	NĒåĪ	*RacanĒ đĒrĪra*	Literally means tubular stalk or flute, the term refers to a duct, vein or artery in human body, specifically used for pulse or radial artery . It also signifies the fine energy channels through which movement and impulses are controlled. Hence, it is used for the nerve fibres within the human body.There are three main NĒåĪs namely IåĒ, PiŽgalĒ and SuūumnĒ. SuūumnĒ is the major nerve bundle which passes through the spinal column while IåĒ and PiŽgalĒ intertwine the spinal column.
3.	NĒåĪ ParĪkūĒ 	*Roga NidĒna*	One of the Aū°avidha ParĪkūĒ, the term stands for pulse examination. It is unique amongst all systems of diagnosis in the world as it is not merely the counting of the pulse rate but is an art as well as science which helps to assess the Doūika equilibrium in the body and thus in diagnosis and thereafter

			treatment of the individual. It is conducted early in the morning on empty stomach. Pulse is examined at the root of the thumb, one AŽgula below Maīibandha SandhĪ by examining the radial artery pulse. The index, middle and ring fingers are used. VĒta Doūa is examined by tip of index finger, Pitta by tip of middle finger and Kapha by tip of ring finger. The pulse rhythm varies in accordance with the patient's bodily condition (hunger, thirst, sleep and stage of digestion); environmental conditions (exposure to sun, cold & breeze); and mental state (anger, sorrow, joy).
4.	NĒåĪ Svedana	*KĒyacikitsĒ*	Steam kettle sudation. A type of local thermal fomentation, wherein the herbs are boiled to prepare decoction over low flame in a pressure cooker or kettle. The steam thus produced is passed through a hose and directed towards the desired body part. It is effective in joint pains, muscle spasm, spondylitis & paralysis.
5.	NĒnĒtmaja Roga	*KĒyacikitsĒ*	A disease caused by single Doūa which is predominant, i.e. either of VĒta, Pitta or Kapha. ''Anatamaja' pertains to the one which is not produced by self. Here, the prefix ''NĒ' representing ''not' has been added to the term ''AnĒtmaja'; and literally the term means the disease which is produced from ones own self or a

			single Dosa only. Eighty types of VĒta, forty of Pitta & twenty types of Kapha NĒnĒtmaja disorders have been described in classical texts.
6.	Nasya 	*KĒyacikitsĒ*	One of the five major therapeutic procedures mentioned in PaŪacakarma, ''Nasa' means nose and the term Nasya signifies nasal application of herbal medicines .The nose is the doorway to the đira or the brain. It is a specific treatment for every disorder arising above the collarbone (Urdhvajatrugata) and can be given in healthy individuals as well. It consists of an oil massage of head, neck and shoulders, combined with fomentation of that area and thereafter, the medicines are administered through the nostrils in specific quantity. The therapy cleanses the nostrils and sinuses of accumulated mucous and toxins and strengthens the nervous system. Ayurveda recommends this treatment for strengthening the whole respiratory apparatus, eliminating sinus trouble and reducing congestion in the head and chest as well as tension in the neck. An excess of bodily humors accumulated in the sinus, throat, nose or head area are eliminated by means of the nearest possible opening, the nose. Nasya is of three types,

			purgative (đodhana), nourishing (BĻhažīa) and palliative (đamana). For each ailment a substance that gives desirable result is selected. See
7.	đirovirecana also.	*NidĒna Roga NidĒna*	SažskĻta term that refers to aetiology or the initiator of the disorder as well as diagnosis of the disease. It is a factor both in genesis as well as the knowledge of the disease.What seed is to the sprout, NidĒna is to the disease. It signifies all the aetiological factors whether endogenous, exogenous, immediate or distant.
8.	NidĒna PaŪcaka	*Roga NidĒna*	Etiological pentads. The term signifies the five fold methodology for examination or the five steps of the Roga ParĪkūĒ which are the means of understanding the genesis of the disease.These are employed for proper diagnosis of the disorder. It includes NidĒna (aetiological factors), PĶrvarĶpa (porodromal signs), RĶpa (signs & Symptoms), Upašaya (therapeutics tests) and SamprĒpti (pathogenesis). Though employed collectively for proper diagnosis, they are significant individually also and are applicable in different states of the disease management.
9.	NidrĒ	*đĒrĪrakriyĒ*	SažskĻta term for sleep. When the mind is afflicted by ''Tama' at night, the Kapha Doūa increases and natural sleep is inflicted. When organs of coginition and

			action, i.e. ManaŠ and Indriya are fatigued, these are withdrawn from their respective functions & become inactive; both mind and the body go to rest. As a result the individual's interaction with the surroundings comes to a halt. Regarded as one of the three leading pillars of healthy living (Upastambha), it is also a basic instinct and is an essential requirement for life and good health.
10.	Nija Roga	*Roga NidĒna*	Innate, internal or one's own. Refers to endogenous (systemic) disorders caused due to derangement of Dosha-dhatu equilibrium and other intrinsic factors of the body due to faulty diet and lifestyles.
11.	NirĒma	*Roga NidĒna*	The term signifies the one which is free from Ąma. The Doūa may be aggravated in such conditions but it is compartively easier to balance the vitiated Doūa, as no pre-therapy of DĪpana - PĒcana drugs is required. (SĒma with Ąma).
12.	Niruha Basti	*KĒyacikitsĒ*	See ĄsthĒpana Basti.
13.	NiryĒsa 	*Dravyaguīa*	SažskĻta term for exudates from the medicinal plants.

14.	Niyama	*SvasthavĻtta*	The personal do's and donts. Literally the term means to restrain, regulate, control or check. ''Ni' refers to within and ''Yama' refers to self restraint. Second limb of Aū°ĒŽga Yoga, it signifies the art of self purification, i.e. right conduct towards oneself. It involves keeping one's mind free from anxiety, depression, low self-esteem, doubts, and negative mental states such as hatred, anger and pride. It also implies eliminating these negative qualities and re-establishing positive ones through constructive observances which include - Santoūa (contentment), đauca (purity), SvĒdhyĒya (self-discipline), Tapas (austerity) and Ęšvara PrĒiidhĒna (devotion to god).
1.	Ojas	*đĒrĪrakriyĒ*	Bodily strength, ability or the vital power. It is the invisible source of life force or vigour that imparts energy to the individual. It is the superfine essence of bodily tissues (DhĒtu), rightly called as life sap. Ojas is positive, nurturing energy that boosts the immune, nervous, endocrine and psychological systems in the individual. It is the outcome of proper digestion of nourishing foods in the body. Hence, a nourishing diet combined with excellent digestion is the key to building Ojas. It is of two types

			Para-Ojas & Apara-Ojas. Former is located in HĻdaya (heart) and measures Aū°a Bindu (eight drops) in quantity whereas the other is distributed all over the body and measures ArdhĒŪjali (half of the folded hollow of the hand) quantity. It corresponds to the immune functions of the body. Physically, it is white in colour, with slightly yellow and red tinge and is of the nature of Kapha. It has ten specific pharmacodynamical properties - Madhura (sweet), đĪta (cold), MĻdu (soft), Snigdha (unctuous), Bahal(abundant),đlakūīa (smooth), Picchila (slimy), Guru (heavy), Manda (dull/not fast) & Prassana (clear).
2.	Ojokūaya	*Roga NidĒna*	Literally means Depletion of Ojas. It is a condition which occurs due to the excessive loss and wasting of Ojas. It is manifested as loss of consciousness, wasting of muscles, wasting of bones, stupor, delirium, loss of memory and even death. Many scholars have correlated the condition with AIDS (Aquired Immuno deficiency Syndrome). See Ojas also.
3.	Ojomeha	*Roga NidĒna*	A SažskĻta term which literally means excretion of Ojas in the urine and refers to Madhumeha (diabetes mellitus) as the disease

			is also characterised by loss of vitality. See Madhumeha also.
1.	PĒcakĒgni	*đĒrĪrakriyĒ*	See Ja°harĒgni.
2.	Pacaka Pitta	*đĒrĪrakriyĒ*	One of the five sub-types of Pitta (fire) that digests food (Pacati). Situated in the region between the stomach and the intestines, it is the essence behind the digestive fire. It is responsible for all the steps of digestion, till the extraction of the SĒra or essence from food. It is the basis and support of the other forms of Pitta. When aggravated, it causes indigestion which results in hyperacidity and ulcers. If impaired, it causes poor absorption and low digestive fire. It can be compared to the digestive enzymes, hepatic bile or bile with pancreatic juice in particular.
3.	Pacana	*Dravyaguīa / đalya Tažtra*	One of the pharmacodynamic actions of drug mentioned in Ąyurvedika pharmacology. Literally the term denotes digestion or the drugs capable of digesting Ąma toxins and undigested residues. The drugs increase the secretion of digestive juices and help directly in digestion of food but they do not enhance the gastric fire and therefore do not stimulate appetite. For example, NĒgakešara (Mesua ferrea). The drugs having the action are also termed as PacanĪya'. 2. In đalya

			Taźtra, it is the eighth measure for the treatment of wounds and stands for ripening'. It refers to procedures which aid suppuration and help in dehydrating wounds.
4.	PadĒrtha	*Maulika SiddhĒnta*	Literally the term refers to the meaning of a word. But specifically the term stands for the matter'. A PadĒrtha is an object of valid knowledge which can be thought of or perceived (Artha) and named (Pada). All things which exist and all objects of experience are hence PadĒrtha. Simple substances are eternal and independent (KĒraīa Dravya). Compound substance is dependent and transitory. There are six PadĒrtha or categories in theist philosophy of Vaišeūika which are also accepted in Ąyurveda. They are Dravya (substance), Guīa (quality), Karma (activity), SĒmĒnya (generality or similarity amongst objects), Višeūa (difference or dissimilarity amongst objects) and SamavĒya (inseparable inherence). In Ąyurveda they are classified on basis of therapeutic importance as SĒmĒnya, Višeūa, Drayva, Guīa, Karma and SamavĒya.
5.	PaŪcagavya	*KĒyacikitsĒ*	Five important products obtained from cow which includes milk (Dugdha), curd (Dadhi), clarified butter (GhĻta), urine (MĶtra) and dung (Gomaya). These

			components may be used alone or in combination with other herbs for treatment of diseases. Their use is therapeutic as well as in auspicious rituals. Their properties are believed to strengthen our immune system. Formulations such as PaŪcagavya GhĻta and KalyĒīaka GhĻta have been specifically mentioned in psychiatric disorders like UnmĒda & ApasmĒra.
6.	PaŪcakarma 	*KĒyacikitsĒ*	SažskĻta term wherein ⍰PaŪca' stands for five and ⍰Karma' stands for therapeutic measures; thereby the term collectively signifies a pentad of therapeutic procedures for bio-purification & rejuvenative therapies to detoxify the body and to revitalise the entire system. A collective expression for Sažšodhana Cikitsa, it is a curative management plan for diseases. It may be employed before the start of treatment procedures for many disorders as the body needs to be cleansed of impurities and rejuvenated in health before it can be treated for complex health problems. Apart from it, PaŪcakarma on its own is also a cure to many problems. The therapy involves five cleansing procedures namely: Vamana (emesis), Virecana (purgation), ĄsthĒpana Basti (non-oily cleansing enema), AnuvĒsana

			Basti (nourishing & oleation enema) and Nasya (nasal therapies). These practices are extremely helpful in relieving chronic & deep seated diseases as well as beneficial for preserving and improving physical and mental health. Some scholars alsoincule Raktamokūaīa (therapeutic blood letting) in it.
7.	PaŪcamahĒbhĶta	*Maulika SiddhĒnta*	See MahĒbhĶta.
8.	PaŪcĒŽga	*Dravyaguīa*	PaŪca stands for five and AŽga for parts, the term signifies five useful parts of plant, i.e. plant as a whole including the root, leaves, stem, fruits and flowers. The active principles of the plant are distributed in all these parts.
9.	PaŪcavidha KaūĒya KalpanĒ	*Bhaiūajya KalpanĒ*	Literally the term means five fundamental methods for pharmaceutical preparations. These in decreasing order of potency include - Svarasa (expressed juice of plants/parts), Kalka (paste), KvĒtha (decoction), Hima (cold infusion) & PhĒī°a (hot infusion). These are the basic five ideas on which the branch of Bhaiūajya KalpanĒ is based. All the future developments in this branch were further proliferations of the PaŪacavidha KaūĒyaKalpanĒ. As above formulations had a short shelf life, there was a need for developing secondary

			formulations. Drugs used for the preparations are grouped as MĒhakaūĒya.
10.	PĒīēu	*Roga NidĒna*	The term is used to depict a colour arising due to combination of white & yellow, like the flower of Ketaki or the screw pine, (Pandanus tectorius). It is also used to signify the yellowish discoloration of skin due to deficiency of the blood as in anaemia & hyperbilirubinemia.
11.	PĒrada	*RasašĒstra*	SažskĻta term for the metal mercury. Literally it means the one that enables a person to achieve salvation by overcoming the wordly affairs. It is an important metal used in Ąyurveda which forms the basis of RasašĒstra. Though Mercury is a heavy metal and regarded unsafe for consumption in modern medicine, it is an important part of Indian system of medicine. The Rasa Yoga or mercurial organo- mineral formulations are regarded as better and fast acting in very small doses and are therefore widely prescribed. It is □processed' through a laborious and multi-layered sequence of cleansing with herbs and distillation which render it safe for consumption. Other synonyms of mercury include Rasa, Rasendra, SĶta and Mišraka.

12.	ParĪkūĒ	*Maulika SiddhĒnta*	Literally the term stands for ⍰examination'. In Ąyurveda, it refers to parameters of investigation and diagnosis. For this, three fold (Trividha), six (—aēvidha), eight (Aū°avidha) and tenfold (Dašavidha) methods of examination have been mentioned in Ąyurveda. The three fold examination has been given utmost importance as it forms the basis of all other types. It includes: Daršana (inspection/see & observe), Sparšana (touch/palpation), and Prašna (inquire by asking questions) ParĪkūĒ. Caraka mentions Ąptopadeša (theoretical knowledge), Pratyakūa (practical or Daršana ParĪkūĒ) & AnumĒna (observation & inferences) as three specific methods for examination.
13.	PariīĒma	*Roga NidĒna*	The third major cause of disease. It literally means the end product or transformation. It refers to the changes that take place in the external environment during the various periods of day and seasons of the year. The cyclic changes have corresponding effects on the humans, which can be countered by following seasonal and daily regimens as mentioned in ancient texts. If a person does not modify the lifestyle accordingly, then discordance will arise and lead to a diseased state. It can be more

			specifically defined as being out of harmony with the rhythms and cycles of nature.
14.	Pariūeka	*KĒyacikitsĒ*	It means to sprinkle or to pour. It is a procedure in which medicated liquids like Taila, GhĻta, milk or plain water etc are sprinkled or poured in form of DhĒrĒ or continous stream over the affected body part or the whole body with the help of a cloth dipped in fluid or a vessel, preferably earthen, through a hole in its base. It relieves pain, stiffness and heaviness in the body. It is one of the types of external oleation or fomentation therapies and has been included in Vraīa Cikitsa as well. Pizhichil therapy employed in KeralĪya PaŪcakarma is similar to it.
15.	Parpa°Ī	*RasašĒstra*	Literally the term signifies a thin flake '. A medicinal preparation of mercury and sulphur (Kajjali) prepared by heating it alone or with other drugs over mild heat with a small amount of GhĻta till it melts and thereafter pouring the melted liquid on a banana leaf which is placed over a fresh cowdung cake. It is then covered with another leaf and gently pressed with a pouch made of cow dung. Thereafter it is allowed to cool and flakes of medicine are taken out and powdered. Regarded as the best medicine for gastro-intestinal disorders especially for GrahaīĪ (irritable

			bowel syndrome), it is administered in form of Kalpa, i.e. for a specific period of time in a specified dose and dietary regimens. Such preparations preserve their potency indefinitely.
16.	PašcĒt Karma	*KĒyacikitsĒ*	It refers to the procedures/specific methodology to be followed after the main therapeutic procedure or the PradhĒna Karma has been accomplished.1.In KĒyacikitsa, it refers to the rehabilitative measures following the PaŪcakarma therapy and includes the measures to be followed immediately after the therapy, i.e. the Sažsarjana Krama (normalising diet) and ParihĒra Viūaya (following the specific do's & donts). 2. In đalya Tamtra, all post-operative procedures are included under it.
17.	Pathya	*KĒyacikitsĒ*	Literally it means □that what is beneficial'. It refers to specific dietary as well as lifestyle regimes which are compatible for a person in health or for the one suffering from a specific disease. It signifies the diet and regimen, which does not impair the body's systems, is pleasing for the mind and needs to be advocated during the course of the disorder. It depends upon the nature of disease or diseased, season and the predominant Doūa. Commonly mentioned as the do's

			of the disorder; it has been mentioned as eqivalent to AuūadhĪ (medicine) as it plays a crucial role in management of the disorder. Because of its benefits to the person as a whole, it is also termed as SĒtmya. See Pathya-Apathya also.
18.	Pathya-Apathya	*KĒyacikitsĒ*	A unique concept of Ąyurveda which defines what diet is to taken; what life style is to be followed (Pathya) and what not to follow (Apathya). The concept has been given great emphasis in Ąyurveda. Pathya in disease is worth a thousand medicines and no amount of medication can be beneficial to a patient who does not follow the Pathya prescribed for it, as it itself is a complete medicine. Following of Apathya ever in a healthy person is unwholesome and in the sick person it is highly harmful.
19.	PeyĒ	*Bhaiūajya KalpanĒ*	Thin gruel of rice along with solid portion. It is prepared by boiling one part of coarsely ground rice with fourteen parts of water, till rice particles become soft. PeyĒ is light for digestive system, thus enhances digestive capacity and is the first meal eaten in Sažsarjana Krama
20.	PhĒï°a	*Bhaiūajya KalpanĒ*	It is the fifth and last PaŪcavidha KaūĒya KalpanĒ, least potent of all and light for digestion. It is prepared by adding four parts of hot boiled water to one part of

			coarsely ground herb/s. Thereafter the drug is kept at room temperature for some time, churned well, filtered and supernatant is used. The shelf life of the drug is short and it should be consumed while it is still hot. Prescribed dose for intake is about ninety six milli litres.
21.	Piiēa Svedana	*KĒyacikitsĒ*	The term Piiēa signifies a round or oval pellet, mass or body; and Svedana signifies fomentation. It refers to fomentation procedure performed with a bolus or pouch made of over cooked rice or paste of medicated herbs or sand. It tones the muscles and improves the circulation. The treatment is helpful especially in case of musculo-skeletal disorders. It removes stiffness and provides nourishment to the body. If the bolus of sand is used for fomentation, it is termed as BĒlukĒ (sand) Sveda.
22.	Piū°I	*RasašĒstra*	Literally means fine processed powder. It is a pharmaceutical preparation, usually of minerals prepared by triturating the drug with specified liquids under sun or moonlight, if specified. These preparations preserve their potency indefinitely. They are regarded as the AnĒgnikḶta Bhasma or calcined drugs prepared without thermal application.

23.	Pitta	*đĒrĪrakriyĒ*	One of the three bodily humours (Doūa). The term is derived from the root Tap' which means to burn or to agitate'. Pitta is the representative of the fire in the human body. It is the Ąyurvedika principle of heat energy which governs all the chemical changes & metabolic transformations in the mind and body. Principally located in the middle part of the body between heart and umblicus, it is composed of Teja (fire) and Jala (water).In balance, it promotes understanding and intelligence. Otherwise it arouses anger, hatred and jealousy. It has five subtypes: RaŪjaka, SĒdhaka, BhrĒjaka, PĒcaka and Ąlocaka. 2. Pitta (Mala of Rakta) is byproduct of Rakta DhĒtu. It can be regarded as hepatic bile as the symptoms of Pitta VĻddhi or its aggravation are similar to hyperbilirubinemia, e.g. yellow discolouration of skin, urine, feaces etc. It is related with blood as far as the location and physical properties are concerned. As a waste product it needs to be eliminated from the system as otherwise it may vitiate blood.
24.	PrĒkĻta	*đĒrĪrakriyĒ*	The one that is natural. It refers to the bodily constituents and processes that are physiological and not pathological.

25.	PrĒīa□□	*đĒrĪrakriyĒ*	Literally the term stands for the life energy which keeps the body alive and healthy. In Ąyurveda the term collectively refers to fire (Agni), moon (Soma), wind (VĒyu), Satva, Raja, Tama (Triguīa), five sense organs (JŪĒnendriya) and the empirical soul (ĄtmĒ). These twelve components constitute the vital life forces.
26.	PrĒīa VĒyu	*đĒrĪrakriyĒ*	VĒyu is a SažskĻta term meaning □air' or □breath'. PrĒīa is the term for □vital energy' the one which makes life and all physical activities possible. The term collectively means the foremost or □primary air' or nervous force. One of the five subtypes of VĒta, it is located in the regions of head, nose, tongue and the chest. PrĒīa has mainly an inward movement. It serves to bring the external air, food and water inward; i.e. ingestion and inspiration. It moves downward through the throat to the chest. Breath is the external manifestation of PrĒīa. It governs inhalation and swallowing as well as sneezing, spitting and belching. It governs the intake of impressions through the five senses that reside mainly in the head.
27.	PrĒīayĒma	*SvasthavĻtta*	A combination of the SažskĻta words PrĒīa meaning life energy and ĄyĒma meaning control or mastering. The term literally

			refers to the art of mastering the vital life force, i.e. the breath. It signifies the scientific breathing exercises which involve modulation and control of inhalation, exhalation and the retention of the vital energy. It helps in increasing the mental and physical endurance. It is the path to deeper relaxation and meditation and purifies the blood, vitalizes the internal organs and provides complete relaxation to the nervous system. It has been mentioned as the fourth principle of Aū°ĒŽga Yoga.
28.	PrabhĒva	*Maulika SiddhĒnta*	The effect or prominent, peculiar, specific mode of action of an herb. It is the power of drug to manifest action in its unique way. According to Ąyurveda, a drug produces effect in the body on the basis of its Rasa (taste), Guīa (physio-chemical properties), VĪrya (potency) and VipĒka (drug metabolism) collectively or by the most dominant one out of these suppressing the weak. However, when Rasa, Guīa, VĪrya, and VipĒka in a substance are found similar as in another substance, but in action the two substances differ, it is attributed to the PrabhĒva' of that drug. For example, DantĪ (Baliospermum montanum) has the same Rasa, VipĒka, VĪrya & Guīa as Citraka (Plumbago zeylanica). But DantĪ produces Virecana (purgation)

			while Citraka does not. Therefore, the action of purgation found in Danti can be attributed to its PrabhĒva.
29.	PradhĒna	*Maulika SiddhĒnta*	SažskĻta term derived from the root Pra' meaning before' as the prefix and the verbal root dha' meaning to place'. Thus the term signifies the one which is placed first, or is in a primal position. It is used as a prefix in many terms, for example, PradhĒna KĒraīa (leading cause), PradhĒna Lakūaīa (cardinal sign), PradhĒna Karma (main action) etc.
30.	PradhĒna Karma	*KĒyacikitsĒ*	Means the main therapeutic procedure or action. It is preceeded by PĶrva Karma and follwed by PašcĒtKarma. 1. In KĒyacikitsa refers to PaŪca Karma and signifies the five main bio-purificatory procedures, i.e.Vamana (therapeutic emesis), Virecana (therapeutic purgation), AnuvĒsana (oleation enema), Niruha (non-oleation enema) and Nasya (nasal insufflation). 2. In đalya Tažtra, refers to the main operative procedure.
31.	PrajŪĒparĒdha	*Roga NidĒna*	One of the three important causes of disease mentioned in Ąyurveda. PrajŪĒ signifies correct knowledge, wisdom or intellect and AparĒdha means crime or ''going against'. Hence the term refers to improper use of intellect or acting against correct knowledge. More specifically, it

			refers to a volitional transgression of right conduct. It is improper physical, vocal, and mental activity which results due to loss of DhĪ (discrimination), DhĻti (conviction), and SmĻti (memory). It always leads to fallacious information, wrong conclusions and hazardous actions and hence disease. See DhĪ, DhĻti, SmĻti also.
32.	Prakopa	*Roga NidĒna*	Literally means aggravation or vitiation. Second KriyĒKĒla. The term refers to second stage of disease manifestation characterized by provocation or aggravation of Doūa at their usual or specific sites only, not spreading further. The vitiated Doūa increases quantitatively accompanied with qualitative decrease. As a result, they provoke and irritate the local tissues.The end stage results in subtle physical and mental pre-symptoms produced by the vitiated Doūa, but no recognizable features of any specific disease. This is a fully reversible stage.
33.	PrakĻti	*đĒrĪrakriyĒ*	Literally means □nature' or natural form. □Pra' means beginning, commencement or source of origin; and □KĻti' means to perform or to form. Collectively the terms means □natural form' or □original form' or original source. It refers to unique psychosomatic constitution of an

			individual. PrakḶti is determined by a unique combination of the Tridoūa & Triguīa. Both đĒrĪrika (physical) as well as MĒnasika (mental) PrakḶti have been mentioned in Ąyurveda. However đĒrĪrika PrakḶti has been given prime importance as far as diagnosis and treatment are concerned. Ąyurveda considers that PrakḶti is formed at the time of inception of life on the basis of dominanat Doūa and does not alter during the later phases.The predominant Doūa can be any one of the three, two combined together or all the three in a balanced form, thus forming seven types of constitutions: VĒta, Pitta, Kapha, VĒta-Pitta,VĒta-Kapha, Pitta-Kapha and SannipĒtaja. Ąyurveda places emphasis on understanding the particular constitution of an individual as the basis for prescribing a healing regimen. With the unique constitution determined by the physician, recommendations for diet, lifestyle, and therapy can be made accordingly.
34.	PramĒīa	*Maulika SiddhĒnta*	Refers to means of correct apprehension or valid knowledge. It signifies the means by which truth can be verified. Ąyurveda accepts four such means of correct knowledge or proofs; viz.1) Pratyakūa or direct perception via the senses and

			mind. 2) AnumĒna or inferential knowledge from circumstantial evidences without making any direct perceptions 3) Yukti or analogical reasoning 4) đabda or verbal testimony, i.e. words spoken by a knowledgeable persons or references from very reliable literature. Ąyurveda accepts these as four means of knowledge in arriving at the truth of things.
35.	PramĒīa	*Roga NidĒna*	The term literally refers to amount, quantity or measurement. Specifically for Ąyurvedika diagnosis, the term signifies the measures of general stature and physical proportionality of the patient. One of the factors mentioned in DašĒvidha ParĪkūĒ, it is important in assessing the strength and Ąyu in an individual.
36.	Prameha	*Roga NidĒna*	The term is derived from the root Mih-SiŪcane' which means watering. In humans the term specifically refers to the urinary disorders. With Pra' as the prefix, the term signifies excessive urination or polyurea. In Ąyurveda, the term Prameha holds twin meanings of Prabhuta MĶtrata' or excessive urination and Avil MĶtrata' or turbid urine. It is a generalised term for urinary disorders, genito-urinary and metabolic disorders and includes a wide variety of conditions like diabetes

			insipidus, glycosuria, albuminuria, chyluria and even diabetes mellitus that has been mentioned as Madhumeha in ancient classics.
37.	Prasara	*Roga NidĒna*	The third KriyĒkĒla which marks the onset of spread of disease. The term signifies the third stage of disease manifestation where accumulating vitiated or aggravated Doūa start migrating from their original sites to whole body systems via the Srotasa or body channels. Classical symptoms (RĶpa) of a specific disease are not expressed in this particular stage but symptoms of vitiated Doūa are expressed. In addition, due to the spreading nature of this stage, the symptoms are also not localized and can appear and disappear in different areas of the body.
38.	PrasĶti Tažtra	*KaumĒra BhĻtya*	Branch of Ąyurveda dealing with obstetrics. One of the sixteen specialities of Ąyurveda that have been developed on the basis of Aū°ĒŽga Ąyurveda. It has been described as a part of KaumĒra BhĻtya (paediatrics) in the Aū°ĒŽga Ąyurveda but was segregated and developed independently later on.
39.	Pratyakūa	*Maulika SiddhĒnta*	SažskĻta term composed of two words ⍰Prati' which stands for ⍰in front' and ⍰Akūa' which means ⍰eye'. The term refers to direct perception, i.e. knowledge

			brought about by unhindered contact of sense-organs with their objects. It is the most immediate realisation, not only definite and unerring, but has a sense of immediacy or directness. It is most important and is regarded as superior to the other PramĒia. It is indepedent of previous knowledge, or inference or any manner of projection or conjecture.
40.	PĻthvĪ	*Maulika SiddhĒnta*	The element earth. One of the five eternal elements (PaŪcamahĒbhĶta), PĻthvĪ is the universal organizing principle of stability that characterizes structure and bulk of the material. It is the element which contains specific weight and on which rest of the MahĒbhĶtas act. It has dominant characterstic feature of smell (Gandha). Since the element attributes to smell, nose is regarded as the sense organ of this element.
41.	PĶrvakarma	*Ŧ KĒyacikitsĒ/đaly a Tažtra ŧ*	Preliminary and pre-requisite essential produceres to be carried out before the main therapy. 1.In KĒyacikitsa, the term refers to pre-purification preparatory therapies for PaŪacakarma without which it is difficult to achieve adequate results. Its objective is to prepare the body tissues for the cleansing and release of toxins.The main preparatory practices include

			Snehana (oleation) and Svedana (fomentation). The procedures help to clear the channels (Srotasa) of the toxic overload, and move the imbalanced bio-energies to their sites for elimination. Pacana has also been mentioned as one of the preparatory procedure in the ancient texts. 2. đalya Tažtra, It refers to all the pre-operative preparations.
42.	PĶrvarĶpa	*Roga NidĒna*	Second aspect of the five fold aetiological process i.e. NidĒna PaŪcaka. Literally meaning prior or antecedent form, it refers to early manifestations or premonitory symptoms of the disease which results from accumulation of the Doūa at susceptible sites. It consists of symptoms that forebode a disease. It is recognized to be in two phases: general (SĒmĒnya) and specific (Višeūa). In the general phase, only future occurrence of some particular disease can be known but nothing more about underlying Doūa disturbance; while in specific phase the Doūa responsible for the ensuing disease become clear as well. Besides the identification of a specific disease, it is a valuable aid in determining the curability of the disease, the line of treatment and in the differential diagnosis of the disease.

43.	Pu°a	*RasašĒstra*	An ancient heating arrangement or furnace meant for preparation of Bhasma or Satva. It may be constructed below or above ground level in some definite and specified measures according to the amount of heat to be supplied. Metal or mineral to be heated is kept in a crucible placed in the middle of the furnace, the source of the energy being cowdung cakes. Various Pu°a has been mentioned for preparation of a particular Bhasma, e.g. Gaja Pu°a for Lauha (iron) Bhasma, MahĒ Pu°a for Abhraka (mica) Bhasma
1.	RĒjasika	*đĒrĪrakriyĒ*	Pertaining to qualities of Rajas. It is regarded as one of the mental constitution resulting due to predominance of Rajas.The people in whom these qualities predominate are egoistic, ambitious, aggressive, proud and competitive and have a tendency to control others. Such persons tend to be violent in their disposition (bodily conduct, speech or thought).People belonging to this group are further classified into six types.
2.	RĒjayakūmĒ	*Roga NidĒna*	SažskĻta term for tuberculosis. Regarded as the king of diseases in Ąyurveda, it has been regarded so as the symptoms of the disease itself consist of group of disorders like KĒsa, đvĒsa etc and perhaps it was the leading cause of death in ancient times.

			According to Hindu mythology, Moon, the king among the satellites of the earth, was afflicted with this disease due to a curse of Brahma, the creator, and hence it was named the king's disease. Since the disease is characterised by loss of weight and other essential factors, it was also known as Kūaya in ancient times.
3.	RĒtricaryĒ	*Svastha VĻtta*	SažskĻta term for regimen to be followed at night. It is the routine that has been mentioned in ancient classical texts to be followed during evening or night to avoid vitiation of Doūa. It includes the dietary items that need to be taken and the sleep patterns to be followed.
4.	Raja	*PrasĶti Taztra*	See Ąrtava.
5.	Rajas	*đĒrĪrakriyĒ*	The term signifies one of the Triguīa, the essential components or energies of mind. It is the most active component, the one which imparts motivation and initiative to the mind. It is the force or the energy of movement characterized by action, energy, passion and stimulation that leads to the life of sensual enjoyment, pleasure and pain, efforts and restlessness.The word is derived from the root followed.RaŪj' which means to colour, the term is frequently

			used for vapour, mist and clouded atomosphere..
6.	Rakta	*đĒrĪrakriyĒ*	One of the seven bodily components; second most important after Rasa, it is the bodily fluid, i.e. blood. As per Ąyurvedika physiology, it is formed by the action of the RaŪjaka Pitta on the subtle aspect of the chyle (Rasa), which results in red colour to the blood. Composed of Jala and Agni as the basic elements, its principle seats are liver and the spleen and function is preservation of life (JĪvanĪyam). It nourishes the other bodily constituents, more specifically re-inforces the succeeding constituent i.e.MĒžsa. It vitalizes and maintains normal activities of life. It also endows on the body the natural glow of complexion.
7.	Raktamokūaīa 	*đalyaTažtra*	Therapeutic blood letting. Regarded as one of the five purificatory procedures (PaŪcakarmma) by Sušruta, it is an invasive procedure which is used for management of diseases caused by vitiation of Rakta and Pitta.This is done either by puncturing the vessels by sharp instruments (venesection/ điravedha) or application of leeches (JalĶkĒ) or by suction with the help of horn etc. The therapy is used for treatment of skin disorders, abscesses, gout, allergies, liver

			and spleen enlargements. It is more useful for treatment of chronic disorders which do not respond to other treatments.
8.	RaŪjaka Pitta	*đĒrĪrakriyĒ*	The term literally means the one that imparts colour. One of the five sub-types of Pitta, situated in the areas of liver and spleen, imparts pigment to subtle aspect of chyle (Rasa) and transforms it into blood (Rakta). It imparts colour to bile and stool also.
9.	Rasa	*Dravyaguīa*	The term has multiple meanings in Ąyurveda including juice, taste and essence. In Ąyurvedic pharmacology, it is regarded as one of the principle characterstics of the Dravya .i.e. the taste. It imparts the first direct and immediate action of the drug which is expressed when the drug comes in contact with the tongue, sense organ of taste .There are six types of tastes, commonly termed as —aēarasa viz. Madhura (sweet), Amla (sour), Lavaīa (saline), Ka°u (pungent),Tikta (bitter) and KaūĒya (astringent). The existence of different types of tastes is attribuated to varying PaŪacabhautika composition. Each Rasa has a specific pacifying or vitiating effect on the Doūa and the Dravya is selected keeping in view the Rasa and the predominent Doūa in the body of the patient.

10.	Rasa	*RasašĒstra*	The term signifies the principal element, i.e. mercury, used in Ąyurvedic pharmaceutics. The element has been named so because of its semi-fluid character and capacity to liquify all the other metals and imbibe them into it. It has miraculous curative powers. See PĒrada also.
11.	Rasa	*đĒrĪrakriyĒ*	Derived from the root √Ras' meaning √to move', the term signifies the food-essence and the body sap. It is the end product of digestion of food. Regarded as the first and most important among the seven bodily constituents, it is the substantial aspect of the food that is properly digested. It nourishes not only the immediately next constituent, viz Rakta, but all the succeeding bodily constituents. It circulates throughout the body and provides a soothing effect on entire system (PrĪiana). It is concerned with the conservation, transformation, and revitalization of energy. Apart from nourishing the body, it boosts the immunity and helps to keep the body and mind in best of health.
12.	RasašĒstra	*Maulika SiddhĒnta*	The term literally means √science of mercury'. It refers to branch of Ąyurveda dealing with processing and therapeutic use of metals, minerals and allied products. It is the science of making metals and minerals assimilable to human

			body so that these can be utilised as medicines.The branch principally deals with pharmaceutical preparations of mercury which is the term for Rasa.
13.	Rasauūadhi	*RasašĒstra*	Medicaments or preparations containing metals or minerals as the main ingredient. Though all the formulations of metals and minerals are regarded as Rasauūadhi, the term specifically refers to the formulations containing Rasa or mercury. Mercury is considered to be the king of all the therapeutically usable metals and minerals in Ąyurveda and hence called as Rasendra.
14.	RasĒyana	*Aū°ĒŽga Ąyurveda*	One of the eight clinical specialties of Ąyurveda which includes the rejuvenative therapies which regenerate body and mind and prevents ageing.The term Rasa signifies the fundamental body fluid while Ayana means the way, i.e. movement or circulation. Hence, the term refers to transport of the nutritive essence thoughout the body, nourishing and maintaining cells and systems, encouraging the growth of new cells and expelling damaged cells and toxins. It includes therapeutic procedures, i.e use of certain drugs and measures which prevent or retard the process of ageing, impart longevity,

			immunity and resistance against diseases. It increases life span and memory. The therapy involves use of certain drugs of plant or mineral origin which act by improving the digestive power or raising the nutrirtional value of Rasa or cleansing or toning up of body channels i.e. Srotasa. In modern terms, the drugs and the therapy can be regarded as adaptogenic agents which act through nutraceutical dynamics.There are two methods of therapy in vogue: one involves confinement of the patient in a specially constructed cottage over a length of time (Ku°iprĒvešika). It is an intense type of treatment which isolates the patient from human contact as well as physical surroundings (including sun and fresh air). The other permits patient's exposure to sun and fresh air while allowing him to pursue normal avocations (VĒtĒtapika). A third type has been described as ĄcĒra RasĒyana or following the right codes of conduct.
15.	Recaka	*Dravyaguīa*	Literally the term means expulsion. Derived from the verbal root Rec' meaning to empty or to purge. 1. It refers to the stage of exhalation in PrĒīayĒma (breath control). 2. As mentioned in Ąyurvedika pharmacology, it is one of the pharmacodynamic actions of

			drugs mentioned in Ąyurveda. It refers to the drugs which makes the feaces watery and expels it forcibly wheather formed or not. Thus these are the purging medicines which stimulate evacuation of bowels. For example, Trivrita (Operculina turpethum).
16.	§tucaryĒ	*Svastha VĻtta*	The term stands for seasonal conduct / regimen. Indian year has been divided into six seasons of two months each namely đišira, Vasanta, GrĪūma, VarūĒ, đarada and Hemanta. Each season has a characterstic impact on the human body. To negate the impacts injurious to health, a specific conduct needs to be followed which has been mentioned as §tucaryĒ in the ancient classical texts. Similar to the daily routine, seasonal regimen is also a necessary part of hygiene and preventive medicine. The prescribed seasonal conduct for each season includes the diet and the drinks to be taken or avoided, residence, clothing, rest, exercise, prophylactic measures that are appropriate to climatic conditions. It is advised that one should gradually leave the regimen of ongoing season and adopt that of the coming season.
17.	Roga	*Roga NidĒna*	SažskĻta term for disease. It is derived from the root √Ruk' which stands for pain and it is defined

			as the condition which impairs quality of life and is characterised by presence of pain or discomfort in the body as well as mental affliction. See Gada also.
18.	Rukūaīa	*KĒyacikitsĒ*	One of the six preparatory treatments (Upakrama), literally the term means the one which creates dryness. Regarded as one of the three depleting therapies (LaŽghana), the term signifies the dehydration therapy. It is useful for treatment of excess Pitta and Kapha.The drugs used for this therapy have characterstic properties like light, hot, sharp, rough, mobile and hardness. The therapy involves the intake of pungent (Ka°u), bitter (Tikta) and astringent (KaūĒya) substances. It is best suited for conditions where the channels of circulation are obstructed and there is an excessive dominance of the aggravated Doūa for example spasticity of the thighs, gout and urinary disorders.
19.	RĶkūa	*Dravyaguīa*	One of the twenty physico-pharmacological qualities of the drugs mentioned in Ayurvedic pharmacology, the term literally refers to dry, arid and non-greasy. It is principally composed of PĻthvĪ, Agni and VĒyu. The property aggravates VĒta and pacifies Kapha. It generates dryness, hardness, and roughness over the body. Its main function is đoūaīa (to absorb),

			besides developing roughness, hardness and destroying strength and complexion. As for therapeutic benefits, the drugs having this property are AvḶūya (non-aphrodisiac) and a Stambhan (cease secretions) and are thus useful in diseases of excessive secretion e.g. diarrhoea.
20.	RĶpa	*Roga NidĒna*	SažskḶta term that literally means what can be visualised, i.e. a form, image, figure or appearance. Third aspect of the aetiological process of diagnosis (NidĒna PaŪcaka), it denotes the cardinal signs and symptoms of the disorder. Regarded as the definite expression of the pre-monitory symptoms i.e. PĶrvarĶpa, its knowledge plays an important role in identifying the specific nature of disease.Without its proper knowledge, the physician can not effectively speculate the dianosis as well as the line of treatment of the disease. It has been mentioned as of two kinds: SĒmĒnya i.e. generalised symptoms or the total nature of disease and Višeūa, i.e. the specific individual symptoms as per Doūa predominance on which alone the nature of disease rests.
1.	Sadharana Rasa	*RasašĒstra*	A group of eight simple minerals used in Ayurveda viz. Kampillaka(Mallotus

			phillippinensis), Malla(white arsenic), Navasadara(ammonium chloride), Kaparda(cowrie), Agnijara(Ambergis), Girisindura(Red oxide of Mercury), Hingula(Cinnabar) and Mrddarasankha(Litharge).
2.	đĒlĒkya	*Aū°ĒŽga Ąyurveda*	The term đĒlĒkya' has been derived from the root đalĒkĒ which means a lancet or probe. It refers to the branch of Ąyurveda which employs the usage of a probe for management of diseases. It is regarded as the branch which deals with management of diseases that inflict the organs above collar bone (Urdhvajatrugata Roga), i.e. eyes, ears, nose, throat and the oral cavity. Since all the organs are deep seated and a probe is required to visulise their internals, it has been named so. It is a multi-faceted branch which incorporates the modern specialties of ENT, opthalmology and oto-laryngology.
3.	đalya	*Aū°ĒŽga Ąyurveda*	The term literally means a foreign body or material which bothers the psyche or physical body. It is the branch of Aū°ĒŽga Ąyurveda which deals with extraction various types of foreign bodies that have been producing disorders. Regarded as a significant branch of Ąyurveda, it originated from the sage-physician Sušruta, who is also considered the father of plastic

			surgery. The branch was popular since ancient times as this could give fast relief as compared to the slow process of recovery from medicines or herbs. Caraka, the best-known physician of ancient medicine also recommended it in treatment of certain diseases, which required immediate attention like bleeding piles and Udara Roga. It incorporates the modern speciality of surgery.
4.	đĒrĪra	*đĒrĪra RacanĒ*	Derived from the root đĪrūayate, meaning to be broken down, the term is used for human body, signifying the underlying catabolic processes and the ultimate mortal nature. Mentioned to be one of the constituents of ĄyuŠ, it is the foundation for consiousness, an aggregate of five primary forms of matter and their modifications. It has been defined to be comprising of the three basic structures i.e. Doūa, DhĒtu and Mala.
5.	đĪta	*Dravyaguīa*	SažskĻta term signifying property of coldness of the matter. It is one of the twenty physico-pharmacological qualities of the drugs mentioned in Ąyurvedika pharmacology. Antagonist to the Uūīa Guīa (hotness), it is principally composed of Jala and is characterstic of Madhura, Tikta and KaūĒya Rasa. It aggravates Kapha and VĒta while pacifies the Pitta. The drugs having this

			property are capable of curing MĶrcchĒ (syncope), TĻūīĒ (thirst) and DĒha (burning sensation) in the body. Its main function being Stambhan (cease secretions) and it increases the strength and immunity power as well.
6.	đira	*đĒrĪra RacanĒ*	SažskĻta term for head or skull. The uppermost part of body, it is regarded as UttamĒŽga i.e. the supreme organ which controls functions of the whole body system.
7.	đleūaka Kapha	*đĒrĪrakriyĒ*	Derived from the root đliū ĄliŽgane' which means to be moist or sticky, it is one of the five subtypes of Kapha which lubricates. Located in the joints as the synovial fluid, it binds the joints together thus affording ease of movement by reducing the friction.
8.	đleūamĒ	*đĒrĪrakriyĒ*	See Kapha.
9.	đodhana	*KĒyacikitsĒ*	Purification therapy. It is the detoxification through PaŪacakarma. See Sažšodhana also.
10.	đodhana	*RasašĒstra*	Means purification. In Ąyurvedika pharmaceutics, the term refers to process of detoxification of minerals, metals and poisonous herbal drugs in order to remove the inherent impurities and the toxic effects. The process not only removes the impurities but also potentiates the properties

			and actions of the metals and minerals. It renders the metals and minerals suitable for the process of MĒraīa.
11.	đukra	*KriyĒ đĒrĪra*	It is the last of the seven bodily constituents which is the generative fluid, derived from the MajjĒ. Although in SažskĻta the term refers to the male reproductive part or the semen, as a DhĒtu it signifies the last bodily constituent which is responsible for production of progeny both in males as well as females. It contributes to strength, complexion and nourishment in both men and women. Sušruta is the first to accept the presence of đukra in females.
12.	SĒdhaka Pitta	*đĒrĪrakriyĒ*	The term is derived from the root SĒdh' which means to acccomplish or to realize. One of the five sub-types of Pitta, it signifies the fire or body energy that determines the truth or reality. Located in heart, it functions through the nervous system & senses and governs intellect and intelligence. It thus empowers the mind and is responsible for intelligence, knowledge, memory, enthusiasm and consciousness.
13.	SamĒna VĒyu	*đĒrĪrakriyĒ*	One of the five sub-types of VĒta, it is regarded as the balancing or equalizing air (Sama-ana). It is nervous force behind the

			digestive system. Located between the stomach and the intestines, it governs digestion of food materials, separation of waste products and regulation of composition of body fluids as well as body temperature.
14.	Sažsarjana Krama	*KĒyacikitsĒ*	Post- PaŪcakarma regimen or the PašcĒt Karma of PaŪcakarma therapy. After the removal of Doūas and internal cleansing, the digestive capacity of the individual becomes low and has to be restored. This is achieved through properly planned and gradual changes in diet and lifestyle called as Sažsarjana Krama. It involves special post-therapy dietetic regimen which is designed to restore the digestive fire and absorptive capacity of the person, thus restoring him to a normal state of healths and involves intake of light diet initially and gradually proceeding towards the normal balanced diet.
15.	Saššamana	*KĒyacikitsĒ*	Pacification therapy, also known as đamana.. One of the three principle types of treatments mentioned in Ąyurveda, it signifies the treatment therapies which are intended to pacify the vitiated Doūa at their sites of aggravation without cleansing through drugs, diet and conduct. Thus, the calming or pacifying therapies combine medications and diet with recommendations

			concerning lifestyles. Apart from use of drugs and diet which are digestive, appetite promoting, the conduct is also instrumental in pacification of Doūa which can be physical, verbal as well as mental.
16.	Saẍšodhana	*KĒyacikitsĒ*	One of the three principal types of treatments mentioned in Ąyurveda, it signifies the cleansing therapy which involves elimination of waste products including the vitiated Doūa from the system.The therapy is administered through five therapeutic procedures of PaŪacakarma namely Vamana (emesis), Virecana (purgation), AnuvĒsana (unctuous enema), ĄsthĒpana (non-unctuous/ decoction enema) and đirovirecana (nasal insufflation) and can thus also be defined as Internal purification throughPaŪacakarma. It is recommended as beneficial prior to all methods of treatment specially the rejuvenation (RasĒyana). The therapy is aimed at radical removal of the disease factors and complete restoration of health. It detoxifies the body and mind.
17.	Saiždhava 	*RasašĒstra*	SažskĻta term for Rock salt. It is named after the Indus region where it is found. It is extensively used in Ąyurveda both as a drug and as an adjunct to the drug. Regarded as the best among all

			the salts used in Ąyurveda, it is the only one which is cold in potency (đĪtaVĪrya). It is an appetiser, improves the digestive power and is beneficial for the eyes. It acts on all the three Doūa and is capable of entering even the minutest parts of the body since it is SĶkūma.
18.	SaŪcaya	*Roga NidĒna*	First KriyĒkĒla marked by the stage of accumulation of vitiated Doūa. In this stage the particular dosha remains at its natural site but increases in quantitiy and deteriorates in quality. Signs and symptoms of these are seen and the patient desires for the activities or measures that are opposite to the causative factors. It can be natural (as per the seasons) as well as pathological (due to unhealthy diet and lifestyle regimen).
19.	Sara	*Dravyaguīa*	Literally meaning mobile, it is one of the twenty physico-pharmacological qualities of the drugs mentioned in Ąyurvedika pharmacology. Regarded as the characterstic of Jala, it is the opposite of Sthira and aggravates the Kapha. Its main function is to provoke Doūa into action. It is responsible for breaking the bond and release Mala (excretory product) from the body. It is useful in đodhana CikitsĒ (evacuation therapy).

20.	Sira	*đĒrĪra RacanĒ*	The term literally means tubular vessels through which the fluid flows. It signifies the fine capillaries, arteries, veins or ducts. More specifically, it refers to the blood vessels specially the veins. Primarily forty on basis of Doūa and seven hundred in total, these originate from the region of umblicus (NĒbhi) and spread out over the entire body.These vessels carry VĒta, Pitta, Kapha and Rakta in the body and thus nourish and support the body. These are also used as pathways for blood letting in ancient times (SirĒvedhana), which was regarded as a curative measure.
21.	SmĻti	*đĒrĪrakriyĒ/ KĒya cikitsĒ*	Refers to power of recollection or the memory of an individual.
22.	SnĒyu	*đĒrĪra RacanĒ*	Translated as ligament, the term signifies the tendinous portions of the muscle fibres which prevade the muscle both within and outside. About nine hundred ligaments have been mentioned in ancient classics. Regarded as important structures of body in Ąyurveda, injury to it has been mentioned to cause much more serious disturbances in the functioning of organs of action than injury to bone (Asthi), blood vessels (Sira), muscles (MĒžsa) and joints (Saždhi) including paralysis, loss of limbs and even death.

23.	Sneha	*PadĒrtha VijŪĒna*	SažskĻta term signifying love and affection, the term specifically refers to the unctuous substances used in Ąyurveda for Snehana (oleation therapy). The unctuous substances can be of vegetable origin i.e. Taila or of animal origin i.e. GhĻta, VasĒ and MajjĒ. Of these four types, GhĻta is considered the best.
24.	Snehana	*KĒyacikitsĒ*	SažskĻta term signifying the oleation therapy. It is one of the six preparatory treatments (Upakrama), which is the principal nourishing therapy. It also forms the component of the pre-purification therapy (PĶrvakarma) of thePaŪacakarma. It is a method of lubricating the system with unctuous substances externally as well as internally. On the basis of route of lubrication, it has been further categorised into BĒhya Snehana (external oleation) and ĄbhyĒntara Snehana (internal oleation). While external oleation involves oil massages and oil bath (AbhyaŽga), internal oleation involves internal administration of medicated oils and GhĻta. The method renders the system smooth, liquifies the vitiated Doūa to make them easily extractable. The therapeutic effects of the therapy include good lusture of skin, good digestion, and feeling of lightness

			in the body, sensory acuity and mental alertness.
25.	Snigdha	*Dravyaguīa*	One of the twenty physio-pharmacological qualities of the drugs mentioned in Ąyurvedika pharmacology, the term literally refers to viscid, unctuous, smooth and adhesive. It is principally composed of PĻthvī and Jala. The property aggravates Kapha while pacifying VĒta. It generates unctousness, softness and moistens removing the dryness, hardness, and roughness over the body. Its main function is to strenthen, soften and promote complexion. As for therapeutic benefits, the drugs having this property are VĻūya (aphrodisiac) and BĻhažia (nourishing/bulk promoting).
26.	Srotasa	*KriyĒ đĒrĪra*	The term refers to ducts or canal like structures or channels of circulation or hollow tracts within the body which comprise of the empty space and have openings through which they spread the nutrients to all parts of body for nourishment and growth or transport waste products of body metabolism. These are the channels of circulation that constitute a network of open spaces within the body. Health of the system is maintained by proper functioning of these channels. Srotasa also transport Doūa and may be vitiated by their vitiation. Disease results if the

			circulation of these channels is arrested or impeded. In case of any morbidity, Saẑšodhana therapy is employed i.e. purifications of body channels.
27.	Sthira	*Dravyaguīa*	Literally meaning firm and unmovable, it is one of the twenty physico-pharmacological qualities of the drugs mentioned in Ąyurvedika pharmacology. Regarded as the characterstic of PĻthvĪ, it aggravates Kapha and suppresses the VĒta in the body. It stabilizes the physiological structures and functions. The property is responsible for obstruction of channels (Srotasa Avarodha) also.
28.	SthĶla	*Dravyaguīa*	One of the twenty physico-pharmacological qualities of the drugs mentioned in Ąyurvedika pharmacology, it refers to bulkiness. Characterstic of PĻthvĪ, it aggravates the Kapha. Its function is to promote bulkiness, strengthen the joints, promote complexion, and strength. The drugs having this property are difficult to digest.
29.	SĶkūma	*Dravyaguīa*	One of the twenty physio-pharmacological qualities of the drugs mentioned in Ąyurvedika pharmacology, it refers to the minuteness or fineness. Characterstic of VĒyu, Teja and ĄkĒša, it aggravates the VĒta. Its function is to pierce (Vivaraīa), as a result it enters even into the

			minutest channels of the body. The drugs having this property are easily digestible.
30.	Svastha	*SvasthavĻtta*	SažskĻta term which signifies a healthy human body. It is a state of balanced co-ordination amongst ĄtmĒ, Indriya, and Manah.
31.	Sirodhara 	*KĒyacikitsĒ*	A special form of oil therapy, characterized by pouring medicated oil/ghrta/buttermilkof as a steady stream over the forehead. It is effective in alleviating vata related disorders and mental disorders due to stress and tension. Sirodhara is good for improving memory. Other effects of shirodhara are sound sleep and a soothing effect on mind and body. The medicinal herbs used in the preparation of the dhara fluid, determine the effectiveness of the therapy.
1.	Takra	*Dravyaguīa*	Means buttermilk. It is one of the pharmaceutical preparations prepared by churning curd mixed with water and removing butter from it. It is Madhura, Amla & KaūĒya in Rasa and appetizing, light on digestion and GrĒhĪ', i.e. facilitates digestion and intestinal absorption of digestive juices. It is widely prescribed in treatment of GrahaīĪ (irritable bowel syndrome) & non-infective dirrahoea.

2.	TamakašvĒsa	*KĒyacikitsĒ*	Fifth type of đvĒsa Roga (respiratory disorders) characterized by difficulty in breathing which occurs in paroxyms and is aggravated by mental and enviromental factors.When accompanied with fever, it is called Pratamaka đvĒsa and with Pitta predominance, it is called Sažtamaka đvĒsa. It can be co-related with bronchial asthma and chronic obstructive pulmonary disorders (COPD) on the basis of signs and symptoms present. It is a YĒpya Roga; i.e. palliative disease. See YĒpya Roga also.
3.	Tamas	*Maulika SiddhĒnta*	The word is derived from the root Tam' and represents darkness, inertia and heaviness. It is broadly used to signify AjŪĒna (lack of knowledge).
4.	Tamo Guīa	*KĒyacikitsĒ*	One of three qualities pertaining to the psyche. It has the basic qualities of Guruta' or heaviness and Ąvarīaka' or the one which conceals and repersents mental darkness, delusion, lack of knowledge or ignorance (AjŪĒna). Due to heaviness, it suppresses and controls Rajas and Satva. It is associated with inertia or JaåatĒ and is opposite to Rajas.
5.	TanmĒtrĒ	*Maulika SiddhĒnta*	Precursor of the SthĶla MahĒbhĶta or the five essential elements.These are the SĶkūma MahĒbhĶta which represent the

			minutest undivided particle of matter and confer the specific physico-chemical properties to the Aīu or the atoms which in turn combine to form the molecules of all the life forms. They are the subtle elements formed by the permutation and combination of three attributes of PrakḶti - Satva, Rajas and Tamas. They associate in definite proportions to give rise to the five basic elements or the MahĒbhḴta owing to an inherent tendency to associate. There are fiveTanmĒtrĒs namely PḶthvĪ, Jala, Tejas, VĒyu and AkĒša.
6.	TĒpa Sveda	*KĒyacikitsĒ*	A type of dry thermal sudation where heat is given to the affected part by means of heated cloth, sand, bricks, plates or rubbing the palms together, specially in case of children and over the eyes.
7.	Tarpaka Kapha	*đĒrĪrakriyĒ*	One of the five subtypes of Kapha. It is located in head and nourishes supports and soothes the Mastiūka or the brain and Indriya or the sensory organs by the virtue of its Snehana qualities. It can be co-related with the cerebro-spinal fluid which also performs similar functions.
8.	Teja	*Maulika SiddhĒnta*	Means the one that is illuminiscent, brilliant and sparkling. It is one of the five procreating elements and

			represents Pitta in the form of fire.
9.	TĪkūīa	*Dravyaguīa*	Literally stands for sharp and irritant. One of twenty pharmacodynamical properties of Dravya characterized by its purificatory properties and rapid action. It makes the body light, does not allow the structural elements (DhĒtu) to proliferate and may produce burning sensation, inflammation and oozing of fluids. It is derived from Agni MahĒbhĶta; e.g. Bhallataka (marking nut). It is opposite to Manda.
10.	TĪkūīĒgni	*đĒrĪrakriyĒ / KĒya Cikitsa*	A type of vitiated Ja°harĒgni or the digestive fire which is sharp, aggravated or excited. In this state it is under the influence of vitiated Pitta and easily digests heavy meals in a short time producing a voracious appetite. If the food is not supplied in time, it may consume the body reserves. Such a Pitta produces parched throat, dry palate and burning sensation in the body.
11.	Tridoūa	*Dravyaguīa*	Refers to bitter taste. One of the six Rasas, it is derived from the VĒyu and ĄkĒša MahĒbhĶta. It is Rukūa (dry), đĪta (cold) and Laghu (light) and pacifies the Pitta and Kapha Doūa. It is appetizing, wormifuge, quenches thirst and digests Ąma. Excess consumption causes destruction of structural constituents which

			are rich in water and fat contents like MedĒ & VasĒ (adipose tissue), MajjĒ (marrow) & LasikĒ (lymph).
12.	Tridoūa	*đĒrĪrakriyĒ*	VĒta, Pitta & Kapha. The three (Tri) bodily humours (Doūa) on which the ideology of Ąyurveda is based. These form the fundamental principles of Ąyurvedika physiology on which the concept of health has been conceived. In a healthy body and state of equilibrium they nourish and support all the activities of the body and are termed as DhĒtu'. They are suceptible to imbalance and vitiation of self and other structures and production of diseases due to unhealthy diet & regimens and are then termed as Doūa'. In the state of equilibrium these three fundamental factors maintain the integrity of the human body
13.	Triguīa	*đĒrĪrakriyĒ*	The three mental humours or psychic components. These are the Satva, Rajas & Tamas. In state of equilibrium they together maintain proper mental acquity. Especially of these, Satva is considered as a Guīa more than a Doūa, responsible for knowledge, mental peace and clarity. Rajas & Tamas are suceptible to imbalance and lead emergence of desire, infatuation, anger, greed, arrogance, fear and lack of knowledge.

14.	TḶūīĒ	*KĒyacikitsĒ*	Literally, it stands for thirst. Excessive and unquenchable thirst has been described as a disease under Pitta NĒnĒtmaja diseases.
1.	UdĒna VĒyu	*đĒrĪrakriyĒ*	One of the subtypes of VĒta Doūa. Literally the word means to breathe upwards. It is located in the Kaī°ha i.e. chest & neck and governs Bala (strength), Varīa (complexion), SmḶti (memory) and especially BhĒūaīa (verbal speech).
2.	Udaka Vaha	*đĒrĪrakriyĒ*	One of the types of Srotas or channels of transportation. Literally Udaka means Jala or water and here it represents the channels which transport liquid substances, specially the lymph. They are two in number, arising from TĒlu (palate) and Kloma (Laryngo -trachea). Their vitiation causes drying of lips and tongue, a parched throat and unquenchable thirst. Damage to them may cause instant death. See TḶūīĒ also.
3.	Udvartana 	*KĒyacikitsĒ*	A type of dry massage conducted like an AbhyaŽga but with a dry medium, i.e. powders or pastes of herbs instead of oil. It reduces the Kapha and MedĒ and cleanses the skin and makes it soft. Dry massages help in increasing the surface circulation and contouring the body.

4.	UpadhĒtu	*Ŧ KriyĒšĒrĪra/ RasašĒstra ŧ*	Subsidiary or secondary structural units derived as the by-products of the PrasĒda (pure form) of the DhĒtu. Their main function is to support the body. They do not undergo transformation or nourish the body as their precursors (DhĒtu). These are seven viz. Stanya & Ąrtava (derived from Rasa DhĒtu); KaīēarĒ & Sira (Rakta); six dermal layers & VasĒ (MĒžsa); SnĒyu (MedĒ). 2. In RasašĒstra, it refers to subsidiary minerals. See Annex- 2
5.	UpanĒha Sveda 	*KĒyacikitsĒ*	A type of fomentation where heat application is done through poultice or pastes and plasters. Dry or wet medication may be used as per the requiremint.
6.	Uparasa	*RasašĒstra*	The seven subsidiary minor minerals viz. Gandhaka (sulphur), Gairika (red ochre), KĒsĪsa (iron sulphate), Sphatika (alum), HaritĒla (orpiment), ManaŠšilĒ (realgar), AŪjana (galena) & Kažkuū°ha (exudate of Garcinia morella). See Annex- 2
7.	Upašaya	*KĒyacikitsĒ*	Literally it means the one which is wholesome eventually'. In Ąyurveda, it stands for therapeutic test and is one of the five diagnostic tools of NidĒna PaŪcaka employed for differential diagnosis between GĶåhaliŽga VyĒdhi' or diseases whose signs and symptoms

			closely resemble. Diffential diagnosis is made on basis of the beneficial effect of diet, daily regimen and medication, which may be antagonistic or synergistic (anti-cause, anti-disease or anti-cause & disease), in a diseased or which may appear as acting against but is not in real (ViparĪtĒrthakĒrĪ or contrary in effect). It is righty termed as SĒtmya' or the one which is suitable for the body, on basis of the beneficial effects derived. Eighteen types of Upašaya' have been described in Ąyurveda.
8.	Upastambha	*KĒyacikitsĒ*	Literally the term means the sub pillars'. Like the pillars (Tridoūa) support the main structure or the body, the sub pillars act in conjuction with them in maintaing the intergrity of the body These are three in Ąyurvedic philosophy-the ĄhĒra, Svpana or Nidra & Brahmacarya; meaning thereby the food consumed, the sleep and self control with intelligent handling of sexual energy respectively. Ahara is placed foremost as we are what we eat and food is a must for the survival of this body. The bodily and spiritual growth of a person is determined entirely on this one factor. Second comes the Nidra.When the Mana and Indriyas are fatigued, the sleep is induced naturally to replenish the

			energy and rejuvenate the body. Hence it also forms an important pillar of support to the body. Last is the Brahmacarya which more than abstainence here denotes control of self and senses. Collectively these three factors act like sub-pillars which maintain the integrity of the human body and are beneficial for spiritual growth of an individual.
9.	Upayoga SažsthĒ	*KĒyacikitsĒ*	The correct technique to practice or implement instructions. These have been described in context of ĄhĒravidhi VišeūĒyatana' or practical guidelines for consuming a wholesome diet.
10.	Uūīa	*Dravyaguīa*	Literally means hot or warm. One of the twenty pharmaco-dynamical properties of Dravya. It is derived from the Agni MahĒbhĶta which increases the bodily heat and causes Svedana. It has stimulant action on digestive system and increases appetite and facilitates digestion of Ąma; for e.g. Citraka. Physically it can felt by sense of touch i.e. skin.
11.	UtsĒdana	*đalyaTažtra*	Thirty fifth of the sixty methods to treat a Vraīa. It refers to application of ointments which stimulate growth of tissue and elevation of surface in a dry wound with hollowed edges and less amount of connective tissue.

12.	UttamĒŽga	*đĒlĒkya / đalyaTažtra*	Uttama' refers to the best and 'AŽga' refers to part. In Ąyurveda it refers to the head which is the seat of Mana and the other Indriyas and is hence the best amongst all other body parts.
13.	Uttara Basti	*KĒyacikitsĒ*	One of the types of Basti where therapeutic enema of medicated liquids is given into urethera in males or urethera or vagina in females. The word Uttara' depicts two meanings - the superior' the other the one that follows'. Therefore some consider it as the Basti which is given via the superior orifice and others the Basti which is given following ĄsthĒpana & AnuvĒsana Basti.
1.	Vaidya	*KĒyacikitsĒ*	The SažskĻta term for a physician. In Ąyurveda, a qualified physician is the one who has adequate theoretical knowledge, practical experience and skill and purity of body, mind and speech. Six qualities of a good Vaidya have been described as VidyĒ (clarity of knowledge), Vitarka (a rational & critical approach); VijŪĒna (wide knowledge); SmĻti (a good memory); TatpartĒ (devotion to profession); and KriyĒ (constantly improving oneself practically). Such a physician has been called as PrĒīĒbhisara or the one who brings life back in a dying man.
2.	Vamana	*KĒyacikitsĒ*	It is therapeutic emesis or vomiting induced in a person for a

			bio- purification or treatment of a disoder. The first in the series of PaŪcakarma, it may be performed in succession with other procedures or alone. Vamana Karma acts upto the level of Amasaya, i.e.seat of Kapha Doūa (stomach & first part of small intestine) and eliminates the accumulating Doūa. It has been described as the best treatment for vitiated Kapha. An adequate Vamana is PittĒnta i.e. the one that ends with billious vomiting. The agent applied to induce the procedure is called as Vamaka Dravya', of which Madanaphala (Randia spinosa) is the best.
3.	VĒmana	*KĒyacikitsĒ*	VĒmana was of the reincarnations of the hindu god, Viūīu. The term stands for a dwarf. It is one of the VĒta NĒnĒtmaja VikĒra (a disorder arising from VĒta Doūa alone). When vitiated, VĒta may lead to either gigantism or a stunted growth. VĒta governs all the nervous functions and when vitiated, the condition may result due to endocrinal imbalance at the level of pitutary or the hypothalamus.
4.	VĒjĪkaraīa	*KĒyacikitsĒ*	Eighth branch of Aū°ĒŽga Ąyurveda which deals with semenology and the study of aphrodisiacs. The basic aim of this branch is the production of good quality đukra or semen

			which inturn will produce a better progeny. It deals with treatment of Alpa (oligospermia), Duū°a (vitiated by Dosa) KūĪia (weak sperms) and đuūka (dried semen or aspermia) VĪrya (semen) and the methods and medication for its Puū°i (nourishment), đodhana (purification),VĻddhĪ (qualitative & quantitative increase)and Utpatti (origin).
5.	Varti 	*đalyaTažtra*	A suppository. Medicinal drugs made in form of a finger for introduction at specific sites for local action, like rectum, vagina and eyes etc.
6.	Vasti	*KĒyacikitsĒ*	See Basti.
7.	VĒta	*KĒyacikitsĒ*	One of the three bodily humours present in human body according to ayurvedic principles. The paramount functional component of the human body arising from the ĄkĒša and VĒyu MahĒbhĶta and is predominantly RĒjasika. The term is derived from the root VĒ Gati Gandhanyo' which means movement or to induce, infuse, to make down and to become aware of or to enlighten and effort. Enthusiasm, inspiration and expiration, voluntary actions like talking and walking, circulation of Rakta and the nutrients throughout the body and elimination of wastes from the body are the natural functions of

			VĒta. Among the three Doūa, VĒta is the most powerful and it controls the functioning of both Pitta and Kapha.
8.	VĒta VyĒdhi	*KĒyacikitsĒ*	Eighty diseases caused by vitiation VĒta Doūa alone. Also termed as the VĒta -NĒnĒtmaja VikĒra. Most disorders arise as a result of imbalance between the three Doūa but in these disorders, only VĒta Doūa is vitiated. For e.g. Urustambha, BĒdhirya, Nakhabheda, VipĒdikĒ etc.
9.	VĒyu	*KĒyacikitsĒ*	See VĒta
10.	Veda	*KĒyacikitsĒ*	The term stands for acquisition of knowledge or science. Ąyurveda (ĄyuŠ + Veda) is the comprehensive knowledge of the science of longevity and is derived from Atharvaveda, the fourth Veda. See ĄyuŠ also.
11.	VidĒhĪ	*Dravyaguīa*	Stands for the one which is heating, burning, acidic and causes inflammation. One of the pharmacodynamical properties of Dravya. Such substances cause heartburn and acidity with poor digestion.
12.	VĪrya	*Dravyaguīa*	Refers to potency. It is the power or capacity of a drug to produce an effect on the basis of Dravya as a whole or some of its pharmacodynamical property. It may be regarded that by the virtue of its active principle, a

			substance produces an effect and this capacity of an active principle is its Vīrya'. Two, eight & fifteen types of Vīrya have been described by various scholars, though two types i.e. Uūīa (hot) and đita (cold) are common.
13.	VikĒsĪ	*Dravyaguīa*	One of the pharmacodynamical properties of Dravya by the virtue of which it sucks away and takes out the vitality or the strength from the DhĒtu (body structures) and loosens the joints; causing depression and slackness; e.g. Kramuka (Areca catechu) & Kodrava (Paspalum scrobiculatum)
14.	VikĻti	*KĒyacikitsĒ/ Maulika SiddhĒnta*	Means a state of disequilibrium, imbalance or deficiency or an excess from a normal crange. It is just the opposite of PrakĻti. Disequilibrium of DhĒtu is abnormality or VikĒra and the process by which this state develops is VikĻti. In Maulika SiddhĒnta, it refers to the sixteen products which arise from Avyakta and MahĒna. See PrakĻti also.
15.	VikĻti Viūama SamavĒya	*KĒyacikitsĒ*	An abnormal or irregular combination arising due to combination of particles, molecules which are mutually not alike. The net result of such combinations is variations and emergence of new properties which are not similar to the combining molecules. For

			example, the toxic effect of honey and GhĻta when combined in equal quantity, where as in other ratios they have a synergistic action.
16.	Vilepi	*Bhaiūajya KalpanĒ*	Thick gruel of rice. One of the Pathya KalpanĒs prepared by cooking coarsely ground rice with four parts of water till rice grains turn soft. Consistency of Vilepi is thick and it should have less water and more Siktha' or rice particles
17.	VimlĒpana	*đalyaTažtra*	A method to dissolve the inflammatory lesions. Sixth of the sixty measures for treatment of a Vraīa (wound). Literally it means application of gentle pressure by finger, thumb or bamboo stick on an inflammed swelling which is hard and mildly tender.
18.	VipĒka	*Dravyaguīa*	''Vi' stands for specific and ''Paka' stands for digestion. The term literally stands for metabolism and in Ąyurveda, denotes the action of ingested material at the end of the three stages of digestive process and assimilation. Digestion is bio-transformation of substances in respect of form as well as Rasa; and VipĒka is that type of digestion which may be taken as transformation of ingested material into a different substance with different Rasa. Three and two types of VipĒka are propounded on basis of ''Rasa

			Paka' (transformation in Rasas) & BhĶtĒgnipĒka (transformation in properties of BhĶtĒ) as Madhura (sweet), Amla (sour), Ka°u (bitter) VipĒkas and Guru (heavy) and Laghu (light) VipĒka.
19.	Virecana	*KĒyacikitsĒ*	Second of the five PaŪcakarma procedures. It is the therapy to pacify the Pitta
20.	Viūa	*Dravyaguīa*	Literally the term means a poisonous substance. Any substance in food or enviroment which is capable of depleting Ojas or the vital strength of the body is called a Viūa as such a Dravya has pharmacodynamical properties which are exactly antagonistic to those of Ojas. These are Laghu (light), Rukūa (dry/ non-unctuous), Ąšu (fast acting), Višada (clear) VyavĒyi (quickly absorbed), TĪkūīa (sharp/irritant), VikĒsĪ (causing depression & slackness), SĶkūma (penetrating/fine), Uūīa (hot), & Avyakta Rasa (the one which does not have a specific Rasa). Others include Chedana (desaturating/cleansing), MadakĒrĪ (intoxicating), Ągneya (hot & burning), JĪvitahara (fatal) and YogavĒhĪ (potentiating/ synergistic). See Ojas also.
21.	Višada	*Dravyaguīa*	One of the twenty pharmacological properties representing ''clarity'. It has been described as the property which removes sliminess of the Dravya

			and makes it clear. It arises from PḶthvĪ, VĒyu, Teja and ĄkĒša MahĒbhḴta.
22.	ViūamĒgni	*KĒyacikitsĒ / KriyĒšĒrĪra*	An imbalanced state of Ja°harĒgni arising due to vitiated VĒta. Viūama stands for irregular and in this state the Agni is irregular and fitful so that sometimes the digestion is proper and the other, food remains undigested and produces distension of abdomen, spasm, constipation or loose stools.
23.	Visra	*Dravyaguīa*	The word depicts the smell of raw meat and it is one of the natural properties of Pitta Doūa.
24.	VisrĒvaīa	*đalyaTažtra*	The term literally means ''to allow to flow'. The ninth of the sixty procedures propounded for treating a Vraīa (wound), it stands for blood letting. Prescribed in an inflammed and oedematous wound (đothayukta Vraīa). It is carried out through multiple punctures, application of leeches and venesection etc
25.	VḶžhaīa	*KĒyacikitsĒ*	Means ''to nourish' or to increase the mass. It is one of the six basic therapeutic measures and arises due to ''Guruta' or the virtue of heaviness in Dravya. The things which are heavy on digestion, oily (Snigdha), sweet ((Madhura) or cold (đĪta) in temprament have high calorific value and are thus anabolic and therefore increase

			the bulk of tissue. This type of treatment has been advocated in a KĻša (cachexic). AnuvĒsana Basti has a similar effect.
26.	VĻūya	*KĒyacikitsĒ*	Represents the one that nourishes. The drugs, dietary regimen and lifestyles that are nourishing and promote virility are VĻūya i.e. beneficial for VĒjĪkaraīa. For e.g. Konch seeds (Mucuna prurita)
27.	VyĒdhi	*KĒyacikitsĒ*	Stands for ''diseased state'. It has been defined as a state in which both the body and mind are subjected to pain and misery or a state which proves to be a source of torment or pain to the person. It has been described using various synonymns like Ąmaya (arising from Ąma), Gada (arising from multiple causes), Ątažka (tormenter), YakūmĒ (syndrome or a symptom complex e.g. RĒjayakūmĒ)), Jvara (raises the body temperature and torments the psyche),VikĒra (VikĻti or a state of functional imbalance), Roga (the one producing Ruja or pain), PĒpmĒ (a consequence of sins), Dukha (misery) and AbĒdha (bounds the mind and body).
28.	VyĒdhisaŽkara	*KĒyacikitsĒ*	Means existence of more than one disease
29.	VyĒnavĒyu	*KriyĒšĒrĪra*	One of the five subtypes of of VĒta Doūa. It is dispersed in the whole body and controls all the voluntary and involuntary

			movements and governs the circulation. The Rasa DhĒtu (plasma) is continously circulated throughout the body being propelled by VyĒna VĒyu and it thus nourishes the whole body.
30.	VyavĒyĪ	*Dravyaguīa*	A substance which is quickly absorbed. One of the phamacodynamical actions of drug. The drug which first gets diffused in the body and thereafter undergoes digestion is VyavĒyĪ e.g. BhĒŽga or Cannabis sativa and Ahiphena (exudate of Papaver somniferum).
1.	YakĻta 	*KĒyacikitsĒ / KriyĒšĒrĪra*	SažskĻta term for Liver. One of the fifty six PratyaŽga or organs in the body. Regarded as one of the principal organs i.e. Koū°hĒŽga in Ąyurveda. Apart from being described as the principle organ for digestion and metabolism, controlling the digestive fire (Agni), it has also been specifically mentioned as the seat / receptacle of blood (RaktĒšaya). Along with PlĪha, it is regarded as the site of Ražjaka Pitta, the form of Pitta , responsible for conversion of Rasa to Rakta. Located on the right side of abdomen, its enlargement (YakĻta VĻddhi) has also been categorized as one of the eight deadly abdominal disorders (Udara Roga).

2.	YakĻta	*Maulika SiddhĒnta*	Yama are the social do's and dont's or the codes of conduct to be followed in a society. These have been prescribed by PĒtaŪjali and the other Hatha YogĪs in Aū°ĒŽga Yoga. These are Ahimsa (non-violence or non-injury), Satya (truthfulness), Asteya (non-stealing), Brahmacarya (celibacy) and ''Aparigraha (non-hoarding of things).
3.	Yažtra 	*RasašĒstra/ đalya/ đĒlĒkya*	Means an equipment or apparatus. 1. In RasašĒstra, refers to the equipments used to extract, purify, control and potentiate PĒrada and make it suitable for consumption and achieving salvation or transformaton of metals into gold. 2. In đalya and đĒlĒkya Tažtra, refers to surgical instruments used in various procedures. See Annex-1
4.	YĒpya Roga	*KĒyacikitsĒ*	Literally, it signifies a treatment which relieves or soothes the symptoms of disease but does not offer a cure. A palliative disease is the one which is not completely curable, occurs in paroxyms and in acute or aggravated state, its sign and symptoms can be subsided by use of Upašaya.These type of diseases are supposed to have a life long affinity and affilct the person at different intervals or

			when aggravated by improper in diet or daily regimens.
5.	Yoga 	*Maulika SiddhĒnta*	The term is derived from root 'Yuj' and literally it means a link ; to add or to join. Yoga is a progressive method of self realization and linking the soul to the supersoul or ParamĒtmĒ. It is one of the six systems of theist philosophy of India, also known as Daršana. It is a practical and spiritual science. References are found in VedĒs, PurĒīas and other traditional texts of India. Maharūi PĒtaŪjali compiled various references about Yoga and systematically codified in the form of Yoga SĶtrĒs. According to him Yoga is a means of modification of mental activities or afflictions (YogašcittavĻtti Nirodha). There are eight limbs of the Yoga called as Aū°ĒŽga Yoga 1.Yama (social do□s and don□ts), 2. Niyama (personal do□s and don□ts), 3. Ąsana (psycho-physical postures), 4. PrĒīĒyĒma (regulation of breathing), 5. PratyĒhĒra (withdrawal of the senses), 6. DhĒraīa (concentration), 7. DhyĒna (meditation), 8. SamĒdhi (Culmination or unification of individual soul with the universal soul or to establish one self with the universal consciousness).
6.	YogavĒhĪ	*Dravyaguīa*	A drug or drug vehicle which carries and accentuates the effects of the original drug to

			which it is added without undergoing any change in its natural properties. These drugs are employed as drug adjuvants or vehicles or as AnupĒna owing to their SĶkūma,VyavĒyĪ & VikĒsĪ Guīa.
7.	Yukti	*KĒyacikitsĒ*	Means the ''rationale' or ''a planned technique'. An argument becomes an inference when it is supported by a rational approach and this rational approach is Yukti. It has been included as one of the methods of investigation. In Ąyurveda, it has been described as 'planning of therapy with due consideration of body, Doūa & DĶūya (the vitiator & the vitiated) etc. In KĒyacikitsĒ, it refers to undersatanding and visualizing the entities which combine in infinite ways to produce a diseased state and to plan a suitable therapy for its elimination.
8.	Yoga Basti	*KĒyacikitsĒ*	Eight days regimen of Basti treatment consisting of five AnuvĒsana and three ĄsthĒpana Basti in ratio of 1:3:3:1, with one AnuvĒsana initially and at the end and AnuvĒsana alternating with ĄsthĒpana in between. It pacifies vitiated VĒta.
9.	YuktikĻta Bala	*KĒyacikitsĒ*	One of the three types of đĒrĪrika Bala or natural power of resistance. It refers to the enhancement of body's resistance against disease

			through good nutrition, exercise, restorative treatments and RasĒyana and practising the right codes of conduct which strengthen the person spiritually.
10.	YuktivyĒpĒšraya CikitsĒ	*KĒyacikitsĒ*	Literally means ''a planned therapy'. It stands for planning of therapy, the diet, drugs and lifestyle with due consideration of body, Doūa & DĶūya (the vitiator & the vitiated) etc. See Yukti also.
11.	YĶūa	*Bhaiūajya KalpanĒ*	Soup prepared from pulses, especially lentils, in ratio of 1:16 with water or medicated liquids, with flavouring agents and clarified butter (KĻtayĶūa) or without flavouring agents (AkĻtayĶūa). Vegetables and meat may be added but rice is not added. Its consistency is adjustable.
